ISA/IEC 62443 Cybersecurity Fundamentals Specialist Sample Questions (Q80-Q85):

NEW QUESTION # 80

Using the risk matrix below, what is the risk of a medium likelihood event with high consequence?

- A. Option D
- **B. Option B**
- C. Option C
- D. Option A

Answer: B

Explanation:

According to the ISA/IEC 62443 Cybersecurity Fundamentals, the risk matrix is a tool used to assess the risk of a particular event. The risk matrix is divided into three categories: likelihood, consequence, and risk. The likelihood is the probability that an event will occur, the consequence is the impact that the event will have, and the risk is the combination of the two. In this case, the risk of a medium likelihood event with high consequence is a high risk, as shown by the red cell in the matrix. References:

NEW QUESTION # 81

When selecting a risk assessment methodology for a complex industrial automation system, which approach aligns BEST with ISA/IEC 62443 guidance?

- **A. Follow any documented methodology as long as it uses a consistent risk ranking scale.**
- B. Avoid using standards or frameworks to maintain flexibility.
- C. Use different methodologies for initial and detailed assessments to cover more perspectives.
- D. Only perform qualitative assessments without quantitative measures.

Answer: A

Explanation:

ISA/IEC 62443-3-2 states that while it doesn't mandate a specific risk methodology, the chosen approach must be documented, consistent, and based on a risk ranking scale that enables the comparison and prioritization of security needs.

"Any documented risk assessment methodology may be used, provided it results in a repeatable risk ranking and includes asset, threat, and vulnerability evaluation."

- ISA/IEC 62443-3-2:2020, Clause 6.4.1 - Risk Assessment Methodology

This ensures compatibility with SL-T (Target Security Level) assignment and zone/conduit design. Flexibility is allowed, but methodology must be traceable and consistently applied.

What does Foundational Requirement 6 (FR 6) - Timely Response to Events (TRE) require?

- A. Control access to information
- B. Ensure adequate responses to network resource requests
- C. Protect against unauthorized operation
- **D. Notify the proper authority about security violations**

Answer: D

Explanation:

Foundational Requirement 6 (FR 6), Timely Response to Events (TRE), as described in ISA/IEC 62443-3-3, requires that the system detect and respond to security-relevant events, including notifying the proper authority or personnel about security violations in a timely manner. This enables rapid incident response, containment, and recovery actions, all of which are critical to minimizing damage.
