## Buy ISTQB ISTQB-CTAL-TA Valid Dumps Today and Get Free Updates for 1 year

Without doubt, our ISTQB ISTQB-CTAL-TA practice dumps keep up with the latest information and contain the most valued key points that will show up in the real ISTQB ISTQB-CTAL-TA Exam. Meanwhile, we can give you accurate and instant suggestion for our customer services know every detail of our ISTQB ISTQB-CTAL-TA exam questions.

## ISTQB (ISTQB CTAL-TA) ISTQB Certified Tester Advanced Level - Test Analyst (Syllabus 2012) Sample Questions (Q61-Q66):

### NEW QUESTION # 61

Supercar.

Supercar is an online vehicle sales website specializing in a single manufacturer's Sports Utility Vehicles (SUVs) and saloons. A vehicle has two key elements, power unit and body style. The manufacturer offers three choices of power unit: petrol, electric and hybrid. There are 3 main body styles: Saloon, Hatchback and SUV.

SUVs are available only as petrol and electric options. Hybrid is available for Hatchback only. The website will allow an order to be processed if the chosen vehicle configuration is in stock, otherwise a message will be displayed asking the user to try again later.

Based on the specification, the following classification tree has been developed:

Which test case is needed to complete the test set and achieve minimum class coverage?

- A. Power Unit: Hybrid Body Style: Saloon
- **B. Power Unit Hybrid Body Style: Hatchback**
- C. Power Unit: Electric Body Style: Hatchback
- D. Power Unit: Petrol Body Style: Saloon

**Answer: B**

Explanation:

The test case D is needed to complete the test set and achieve minimum class coverage, based on the classification tree. A classification tree is a technique that shows the combinations of inputs and outputs for a given scenario using a graphical representation of classes and subclasses. Minimum class coverage is achieved when at least one representative of each class is tested. The classes for this scenario are:

- \* Power Unit: Petrol, Electric, Hybrid
- \* Body Style: Saloon, Hatchback, SUV

The test case D covers the class Power Unit Hybrid and the class Body Style Hatchback, which are not covered by any other test case. Verified References: [ISTQB Certified Tester Advanced Level Test Analyst CTAL-TA], Section 3.5.1, page 41.

#### NEW QUESTION # 62

During test execution defects have been found including non-compliance to requirements, calculations that produce incorrect results, and improper handling of data or situations.

Which of the following test types is most likely being performed?

- A. Interoperability testing
- **B. Functional correctness testing**
- C. Functional appropriateness testing
- D. Usability testing

**Answer: B**

Explanation:

The test type that is most likely being performed is functional correctness testing. Functional correctness testing is a test type that verifies that the system or component produces the correct results for a given set of inputs or conditions. This test type can detect defects such as non-compliance to requirements, calculations that produce incorrect results, and improper handling of data or situations. Verified References: [ISTQB Certified Tester Advanced Level Test Analyst CTAL-TA], Section 5.1.1, page 59.

#### NEW QUESTION # 63

The following depicts a main path through the use case "Return Item":

USE CASE: Return Item

- \* Use case ID:UC14
- \* Purpose:Customer selects an item for return and prints return label
- \* Actors:Customer, System
- \* Pre-conditions:Customer has opened shopping site home page

Customer Action	System Action
M1 - Select 'My Account'	M2 - Request Log-in details
M3 - Enter Log-In details	M4 - Validate log-in details and display Main Menu
M5 - Select 'My Orders'	M6 - Display Order History screen
M7 - Select 'Return Item'	M8 - Display Return Item screen
M9 - Enter 'Reason for Return'	M10 - Display Print Label screen
M11 - Select 'Print Return Label'	

Exceptions:

- \* E1:Customer is already logged-in (Main Menu displayed) - Step M2
- \* E2:Invalid log-in details entered (Prompt to retry) - Step M4
- \* E3:Third invalid log-in attempt (Account frozen for 24 hours) - Step M4
- \* E4:Go-Back requested - Steps M7 (to Main Menu) and M9 (to Order History) You are to apply the Use Case test technique with the following rules:

- \* One test case for the basic behavior
- \* Multiple alternate behaviors may be combined if compatible
- \* Nested alternate behaviors (like retry) should be amalgamated

How many test cases should be designed?

SELECT ONE OPTION:

- A. 0
- B. 1
- C. 2
- D. 3

**Answer: A**

Explanation:

Comprehensive and Detailed In-Depth Explanation:

- \* Basic Behavior (1 test case)- The standard process of item return without errors.
- \* Alternate Behaviors (2 test cases):
- \* Test Case 2:Incorporates E1 (Already logged in) and the normal flow.
- \* Test Case 3:Includes E2 (Invalid login attempt), E3 (Third attempt - account frozen), and E4 (Go- Back option).

Combining compatible exceptions and following the amalgamation rule leads to 3 test cases in total.

Therefore, the correct answer is A (3).

#### NEW QUESTION # 64

A tablet manufacturer offers the following options for its customers:

- \* Colour:Black, White, Silver, Gold (4 options)
- \* Model:Standard, Mini, Pro (3 options)
- \* Gigabytes:32, 64, 128, 256 (4 options)
- \* Connectivity:Wifi-only, Wifi+Cellular (2 options)

Using the pairwise technique, what is the MINIMUM number of test cases needed to achieve a full 2- wise coverage?

SELECT ONE OPTION

- A. 0
- B. 1
- C. 2
- D. 3

**Answer: D**

Explanation:

Comprehensive and Detailed in Depth Explanation:

\* Pairwise Testing(also known as 2-wise testing) ensures that all possible pairs of input values from each option are covered at least once.

\* The orthogonal array or pairwise generation tool help determine the minimum number of test cases needed.

\* With the given combinations (4 x 3 x 4 x 2), a full pairwise coverage can be achieved using 16 test cases

\* Pairwise testing is efficient for covering interactions between two factors, avoiding the need for exhaustive testing (96 combinations).

Therefore, the correct answer is D (16).

### NEW QUESTION # 65

An airline provides self-service check-in kiosks for passengers. The following use case has been created for the self-service check-in process.

Coverage Rules:

\* One test case should be designed for the basic behavior

\* One test case should be designed for each alternate and error handling behavior Applying these rules to the Self Service Check-in Use Case, how many test cases should be designed?

SELECT ONE OPTION

- A. 0
- B. 1
- C. 2
- D. 3

**Answer: C**

Explanation:

Comprehensive and Detailed in Depth Explanation:

To determine the number of test cases, we follow the coverage rules:

\* Basic Behavior: One test case for the standard check-in process without errors (1 test case).

\* Error Handling (Exceptions): There are 7 exceptions listed (E1 to E7), and each needs a separate test case.

Hence, the total number of test cases is 1 (basic) + 7 (error scenarios) = 8.

Therefore, the correct answer is B (8).

### NEW QUESTION # 66

.....

Many candidates worry that after a long-time review of ISTQB-CTAL-TA, they may still fail the exam due to inadaptation of the test model. So our ExamcollectionPass will provide a exam simulation for you to experience the real exam model before real exam. ISTQB-CTAL-TA exam simulation software is full of questions, which will improve your ability to face the exam after you exercise them. Besides, the detailed answers analysis provided by our professionals will make you be more confidence to Pass ISTQB-CTAL-TA Exam.
