

Enjoy HP HPE7-A11 Exam Questions Free Updates At 30% Discount

Actually, most people do not like learning the boring knowledge. It is hard to understand if our brain rejects taking the initiative. Now, our company has researched the HPE7-A11 study materials, a kind of high efficient learning tool. Firstly, we have deleted all irrelevant knowledge, which decreases your learning pressure. Then, the difficult questions of the HPE7-A11 Study Materials will have vivid explanations. So you will have a better understanding after you carefully see the explanations.

As far as the HPE7-A11 practice test are concerned, these HPE7-A11 practice questions are designed and verified by the experience and qualified HP HPE7-A11 exam trainers. They work together and strive hard to maintain the top standard of HPE7-A11 exam practice questions all the time. So you rest assured that with the HP HPE7-A11 Exam Dumps you will ace your HP HPE7-A11 exam preparation and feel confident to solve all questions in the final HP HPE7-A11 exam.

HPE7-A11 Trustworthy Pdf - 100% Efficient Questions Pool

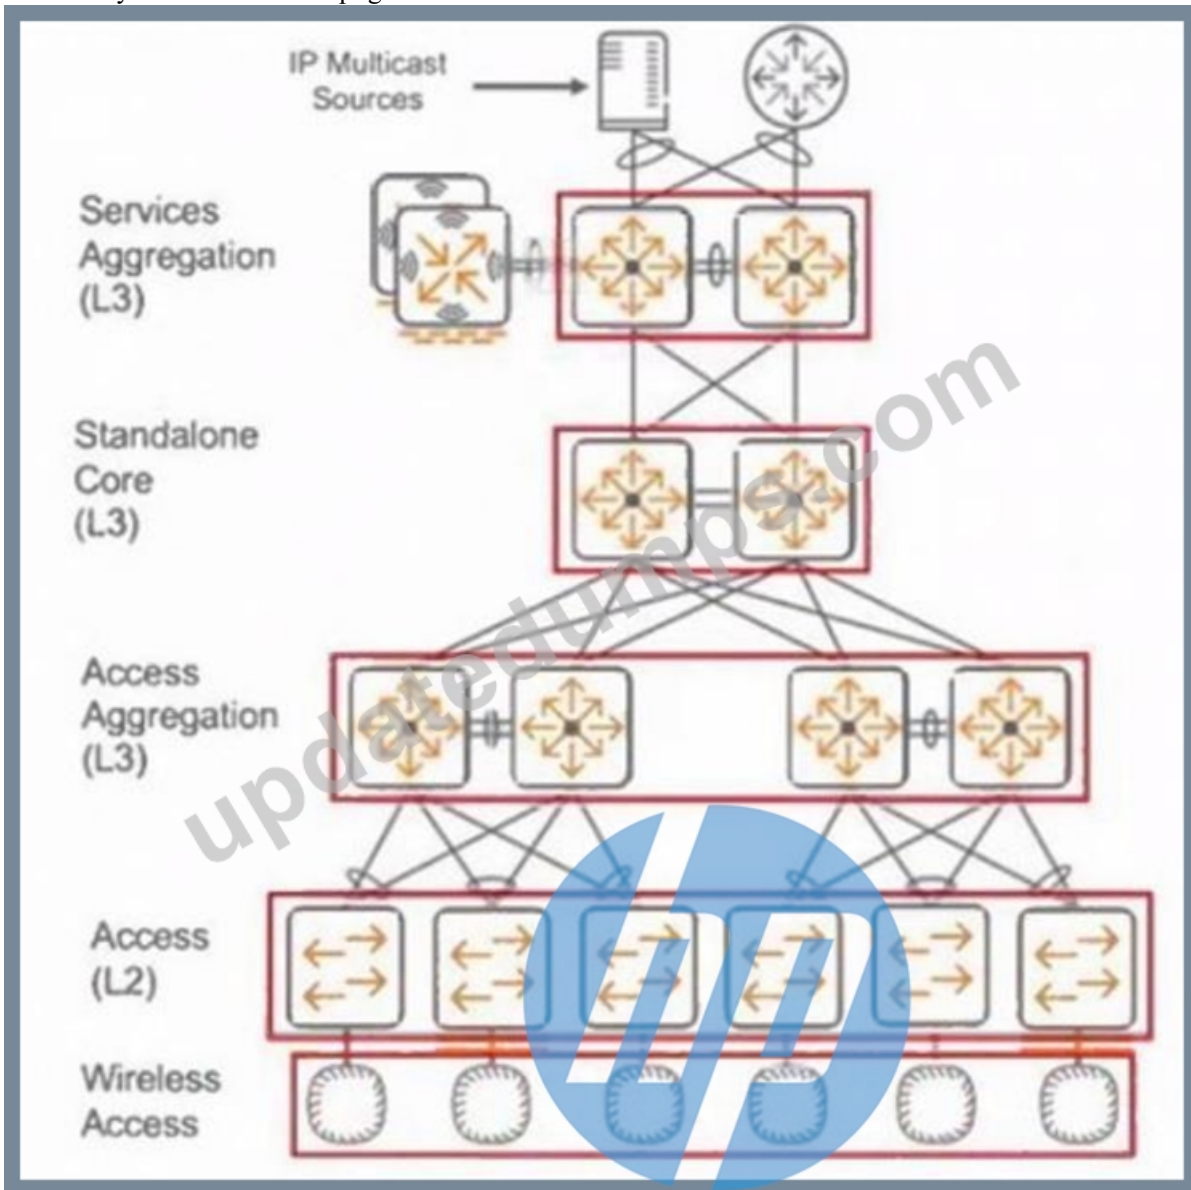

The field of information technology has seen multiple advancements lately. Reputed companies around the globe have set the HPE Network Campus Access Professional Architect Exam HPE7-A11 certification as criteria for multiple well-paid job roles. Only HPE7-A11 certified will easily get high-paying posts in popular companies. Additionally, a HP HPE7-A11 Certification holder can climb the career ladder and get promotions within the current organization.

HPE Network Campus Access Professional Architect Exam Sample Questions (Q107-Q112):

NEW QUESTION # 107

Hotspot Question

Mark the layer where IGMP Snooping should be activated.

Answer:

Explanation:

NEW QUESTION # 108

The client's existing network is experiencing trouble with voice occasionally dropping out on phone calls between office locations. It is determined that no packet loss is occurring and QoS is likely the cause. With what phenomenon is the client currently experiencing issues?

- A.
- B.

- C.

Answer: C

Explanation:

The client is experiencing issues with Jitter, as depicted in Option B. Jitter refers to the variation in time between packets arriving, caused by network congestion, timing drift, or route changes. In voice communications, jitter can manifest as the occasional dropping out of voice on phone calls because the variable delay can affect the steady stream of voice packets needed for a clear conversation. Even when there is no packet loss, high levels of jitter can significantly impact the quality of Voice over IP (VoIP) calls. Quality of Service (QoS) settings are essential in managing jitter, as they can prioritize voice traffic over other types of data, ensuring that voice packets are delivered consistently and in the correct order to minimize delays and prevent call quality degradation. Aruba Campus Access solutions would typically include QoS features to manage and mitigate jitter on the network.

NEW QUESTION # 109

A global cruise line company needs to refresh its current fleet. They will refresh the insides of the ship to be cost-effective and increase their sustainability. They will replace the complete WLAN/LAN hardware of the ship. In this refresh, the company will not refresh its current security requirements. The CIO also wants to limit the number of unused ports in the switches. Future expansion will always mean a refresh of hardware. They start with the smallest ship with a maximum of 800 guests. Each ship has a LAN infrastructure consisting of two core switches, up to 10 redundant distribution switches, and up to 500 access switches (400 cabins, 100 technical rooms). The Core switches are located in the MDF of the ship and the distribution switches are located in the IDF's of the ship. Each cabin and technical room gets one single access switch.

The cabling structure of the ship will not be refreshed. Each IDF is connected to the MDF by SMF, of which two pairs are available for the interconnect between the core and distribution. The length of SM fiber between MDF and IDF is less than 300 meters (930 ft) and the type used is OS1. Each cabin is connected by a single OM2 pair to the IDF, the maximum length is 60 meters (200 ft). Each technical room is connected by a single OM2 pair to the IDF, with lengths between 100 and 150 meters (320 and 500 ft).

For each cabin/technical room the customer is looking to replace their current fan-less 2530/2540 without changing the requirements, except they need to upgrade the uplink to distribution switch to 10GbE to handle the increased network traffic, and the technical rooms need redundant power.

The WLAN infrastructure will be 1:1 refreshed without new cabling or new AP locations. Their WLAN Infrastructure is based on the 200/300 series Indoor and outdoor APs running InstantOS (less than 300 APs), the customer has no change in WLAN requirements.

The cruise line company will replace its current Internet connection before the LAN/WLAN refresh. The new Internet connection will provide a 99.8% uptime, which is needed to ensure the paid guest Wi-Fi is always operational. With this new internet connection, the CIO of the cruise line wants to base the design on the ESP architecture from Aruba because Internet connection is guaranteed. Based on the best practices and customer requirements, what is the correct LAN approach?

- A. management and user VLANs in the overlay
- B. management VLAN in the overlay, user VLANs in the underlay
- C. management and user VLANs in the underlay
- D. management VLAN in the underlay, user VLANs in the overlay

Answer: D

Explanation:

In the context of the ESP architecture from Aruba and the specific requirements of the cruise line company, the best practice would be to place management VLANs in the underlay and user VLANs in the overlay. This design allows for a clear separation of management traffic from user data, enhancing security and network performance. The management underlay ensures secure and reliable access to network infrastructure for administrative purposes, while the user overlay allows for flexible and dynamic segmentation of user traffic. This approach is aligned with best practices for network design, where critical management traffic is isolated from user data to prevent unauthorized access and potential security breaches. It also supports the cruise line's need for a robust and secure network to ensure the operational reliability of paid guest Wi-Fi and other critical services.

NEW QUESTION # 110

A large multinational financial institution has contracted you to design a new full-stack wired and wireless network for their new 6-

story regional office building. The bottom two floors of this facility will be retail space for a large banking branch. The upper floors will be carpeted office space for corporate users, each floor being approximately 100,000 sq ft (9290 sqm). Data centers are all off site and will be out of scope for this project. The customer is underserved by its existing L2-based network Infrastructure and would like to take advantage of modern best practices in the new design. The network should be fully resilient and fault-tolerant, with dynamic segmentation at the edge.

The retail space will include public guest Wi-Fi access. Retail associates will have corporate tablets for customer service, and there will be a mix of wired and wireless devices throughout the retail floors. The corporate users will primarily use wireless for connectivity, but several wired clients, printers, and hard VoIP phones will be in use.

The customer is also planning on renovating the corporate office space in order to take advantage of 'smart office' technology. These improvements will drive blue-dot wayfinding,

presence analytics, and other location-based services. The client has decided that more critical switch stacks supporting Contact Center resources will need to support greater than 600W of CL4 PoE and have redundant power supplies. These stacks will have approximately six members.

What would be the most economical choice Aruba switch series to meet these requirements?

- A. Aruba CX6300F
- B. Aruba CX 6100
- C. Aruba CX 6400
- D. Aruba CX6200M

Answer: A

Explanation:

The Aruba CX 6300F Switch Series is well-suited for environments requiring high PoE power and redundancy in power supplies, especially for critical applications like supporting contact center resources. This series offers robust PoE capabilities, often exceeding 600W of Class 4 PoE power, making it ideal for powering multiple high-powered devices. Additionally, the Aruba CX 6300F supports stack configurations and redundant power supplies, ensuring high availability and reliability for critical network infrastructures. Its economical pricing, combined with high performance and reliability, makes it the most cost-effective choice for the client's requirements.

NEW QUESTION # 111

XYZ Regional Hospital is an integrated healthcare system of hospitals, neighborhood health centers, and small doctor offices. XYZ Regional Hospital has recently merged with 4x neighborhood health centers and 125 doctor branch offices. The wireless, wired access, and AAA solutions are outdated and need to be replaced.

XYZ Regional Hospital is looking to future-proof and improve efficiency across all sites by enhancing wired and wireless access and migrating to a centralized and unified wired/wireless and policy management that can provide uninterrupted availability of all systems.

Locations:

- XYZ Regional Hospital is located in New York City

- Dila Health Center is located in City A

- Mount Health Center is located in City B

- Rock Health Center is located in City C

- Branch clinics are located at different locations across the United States Requirements:

- Provide, via management software, one single pane of glass to manage wired and wireless LANs, and VPNs across campus, branch, and remote via web/cloud architecture providing near real-time insight, troubleshooting tools, and Service Level performance reporting.

- Seamless integration across wired, wireless, WAN, SD-Branch, IoT

- Provide secure wireless access to all the employees of the Regional Hospital and partners, as well as provide wireless Internet access to medical citizens when they visit our facilities.

- All-access points must support the following features and specifications: 802.11.ax (Wi-Fi 6E Certified)

- Security options including WPA2/WPA3, 802.1X with Radius secure authentication

- Identify and authenticate every wireless and wired device

- End-to-end role-based security

- Seamless mobility across the hospital for medical teams, patients, and visitors

- Cuts Wi-Fi deployment times from days to hours and enables Zero-Touch deployments across the site

- Establishes a resilient, future-ready network infrastructure with the intelligence, scalability, and intuitive toolsets to meet emerging needs

- Fully redundant branch solution with dynamic path selection to the hospital A Regional Hospital is looking to improve wireless coverage at their main campus. They would like to perform a wireless survey to address their wireless issues.

What Wi-Fi requirements should the Network Architect request to perform the wireless survey?

(Choose two.)

- A. number of devices and device types
- B. building maps for Health Centers
- C. square footage of the clinics
- D. wireless issues reported at the clinics
- E. latency-sensitive applications

Answer: A,B

Explanation:

Accurate wireless surveys require building maps to model RF propagation and the number and types of devices to determine capacity, roaming behavior, and required AP density. These inputs ensure the survey design meets real-world usage and coverage requirements.

NEW QUESTION # 112

.....

To make sure get the certification easily, our test engine simulates the atmosphere of the HPE7-A11 real exam and quickly grasp the knowledge points of the exam. Our HPE7-A11 vce dumps contain the latest exam pattern and learning materials, which will help you clear exam 100%. Please feel free to contact us if you have any problems about the pass rate or quality of HPE7-A11 Practice Test or updates.
