AD0-E724 Exam Cost - AD0-E724 Valid Exam Forum

For candidates who will attend an exam, some practice for it is necessary. AD0-E724 Exam Dumps of us will give you the practice you need. AD0-E724 exam dumps of us contain the knowledge point of the exam. Skilled professionals will verify the questions and answers, which will guarantee the correctness. Besides, we also offer you free update for one year after purchasing, and the update version will send to your email address automatically.

Adobe Commerce Developer Professional Sample Questions (Q118-Q123):

NEW QUESTION # 118

An Adobe Commerce Developer wishes to add an action to a pre-existing route, but does not wish to interfere with the functionality of the actions from the original route.

What must the developer do to ensure that their action works without any side effects in the original module?

- A. In the route declaration, use the before or after parameters to load their module in before or after the original module.
- B. Inject the new action into the standard router constructor's \$actionist parameter.
- C. Add the action into to the controllers/front_name/ in My.Module, Magento will automatically detect and use it.

Answer: C

Explanation:

In Magento 2, to add a new action to a pre-existing route without interfering with the existing functionality, the new action should be placed in the same directory structure under the new module's controller namespace.

Magento's autoloading mechanism will automatically detect and include it alongside the original module's actions.

Here's how you can achieve this:

- * Directory Structure: Ensure that your new module's controller directory structure mirrors that of the original module.

- * Controller Action: Define the new action within the appropriate directory.

For example, if you want to add a new action to the catalog route in `Magento_Catalog`:

- * Create a directory structure `app/code/My/Module/Controller/Catalog/`.

- * Add your new action class in this directory, for example:

```
namespace My\Module\Controller\Catalog;
use Magento\Framework\App\Action\Action;
use Magento\Framework\App\Action\Context;
class NewAction extends Action
{
    public function __construct(Context $context)
    {
        parent::__construct($context);
    }
    public function execute()
    {
        // Your custom logic here
    }
}
```

Router Configuration: Magento automatically includes this action when the route matches.

By following this method, you ensure that your new action is added seamlessly without modifying the original module or causing conflicts. Magento's router will include and recognize your action based on the directory and namespace conventions.

- * Fundamentals of Magento 2 Development documents .

- * Magento 2 official developer documentation.

NEW QUESTION # 119

Which is a correct CMS content element in Adobe Commerce?

- A. Image
- **B. Widget**
- C. Sheet

Answer: B

Explanation:

A widget is a CMS content element that can be used to display dynamic content on a page. Widgets can be used to display things like product reviews, social media feeds, or even custom content.

In Adobe Commerce, widgets are a correct CMS content element. Widgets allow merchants to add dynamic data or content blocks to CMS pages, static blocks, and various other locations throughout the store's layout without needing to directly edit the site's code.

Options B (Sheet) and C (Image) are not recognized CMS content elements in the context of Adobe Commerce's terminology, making option A the correct answer.

NEW QUESTION # 120

How would a developer add a sensitive environment-specific configuration value on an Adobe Commerce Cloud project?

- A. Use the Cloud CLI for Commerce command `Magento-cloud config:set` to add the configuration
- **B. Add sensitive Environment-specific variable in the Project Web Interface.**
- C. Connect to the server using SSH and add the configuration in the `app/etc/config.php` file.

Answer: B

Explanation:

To add a sensitive environment-specific configuration value on an Adobe Commerce Cloud project, the developer should use the Project Web Interface. This interface allows for the secure entry of sensitive data, which is then encrypted and stored securely. This method ensures that sensitive information is not exposed in the codebase or version control.

NEW QUESTION # 121

A developer wants to deploy a new release to the Adobe Commerce Cloud Staging environment, but first they need the latest code from Production.

What would the developer do to update the Staging environment?

- A. 1. Log in to the Project Web Interface.
2. Choose the Staging environment, and click Merge
- B. 1. Checkout to Production environment
2. Use the magento-cloud synchronize <environment-ID> Commerce CLI Command
- C. 1, Log in to the Project Web Interface.
2. Choose the Staging environment, and click Sync

Answer: C

Explanation:

To update the Staging environment with the latest code from the Production environment on an Adobe Commerce Cloud project, the developer would log in to the Project Web Interface, choose the Staging environment, and then click Sync. This action synchronizes the environments, bringing the latest changes from Production into Staging.

NEW QUESTION # 122

What database engine is part of the infrastructure of Adobe Commerce Cloud projects?

- A. MySQL
- B. Percona
- C. MariaDB

Answer: C

Explanation:

The database engine that is part of the infrastructure of Adobe Commerce Cloud projects is MariaDB.

MariaDB is a fork of MySQL that offers improved performance, scalability, and security features.

The database engine that is part of the infrastructure of Adobe Commerce Cloud projects is MariaDB. Adobe Commerce Cloud is configured to use MariaDB, which is a binary drop-in replacement for MySQL and is chosen for its performance, reliability, and feature set.

NEW QUESTION # 123

.....
