Now you do not need to worry about the relevancy and top standard of itPass4sure Palo Alto Networks Next-Generation Firewall Engineer (NGFW-Engineer) exam questions. These Palo Alto Networks NGFW-Engineer dumps are designed and verified by qualified Palo Alto Networks Next-Generation Firewall Engineer (NGFW-Engineer) exam trainers. Now you can trust itPass4sure Palo Alto Networks Next-Generation Firewall Engineer (NGFW-Engineer) practice questions and start preparation without wasting further time.

Palo Alto Networks NGFW-Engineer Exam Syllabus Topics:

Topic	Details
Topic 1	• PAN-OS Device Setting Configuration: This section evaluates the expertise of System Administrators in configuring device settings on PAN-OS. It includes implementing authentication roles and profiles, and configuring virtual systems with interfaces, zones, routers, and inter-VSYS security. Logging mechanisms such as Strata Logging Service and log forwarding are covered alongside software updates and certificate management for PKI integration and decryption. The section also focuses on configuring Cloud Identity Engine User-ID features and web proxy settings.

Topic 2	• Integration and Automation: This section measures the skills of Automation Engineers in deploying and managing Palo Alto Networks NGFWs across various environments. It includes the installation of PA-Series, VM-Series, CN-Series, and Cloud NGFWs. The use of APIs for automation, integration with third-party services like Kubernetes and Terraform, centralized management with Panorama templates and device groups, as well as building custom dashboards and reports in Application Command Center (ACC) are key topics.
Topic 3	• PAN-OS Networking Configuration: This section of the exam measures the skills of Network Engineers in configuring networking components within PAN-OS. It covers interface setup across Layer 2, Layer 3, virtual wire, tunnel interfaces, and aggregate Ethernet configurations. Additionally, it includes zone creation, high availability configurations (active and active • passive), routing protocols, and GlobalProtect setup for portals, gateways, authentication, and tunneling. The section also addresses IPSec, quantum-resistant cryptography, and GRE tunnels.

Hot Complete NGFW-Engineer Exam Dumps 100% Pass | Latest NGFW-Engineer: Palo Alto Networks Next-Generation Firewall Engineer 100% Pass

If you have a faith, then go to defend it. Gorky once said that faith is a great emotion, a creative force. My dream is to become a top IT expert. I think that for me is nowhere in sight. But to succeed you can have a shortcut, as long as you make the right choice. I took advantage of itPass4sure's Palo Alto Networks NGFW-Engineer exam training materials, and passed the Palo Alto Networks NGFW-Engineer Exam. itPass4sure Palo Alto Networks NGFW-Engineer exam training materials is the best training materials. If you're also have an IT dream. Then go to buy itPass4sure's Palo Alto Networks NGFW-Engineer exam training materials, it will help you achieve your dreams.

Palo Alto Networks Next-Generation Firewall Engineer Sample Questions (Q85-Q90):

NEW QUESTION # 85

An administrator needs to perform several maintenance tasks on a managed firewall directly from the Panorama console, without using the Context Switch feature.

Which set of tasks can the administrator fully execute from the Panorama UI? (Choose one answer)

- A. Download and install a new content update. View current firewall session details. Initiate a device reboot.
- B. Create a new zone. Configure a new virtual router. View the local ACC on the firewall.
- **C. Edit a post-rule. Create a new certificate profile. Configure the firewall's hostname.**
- D. Modify the IP address of a Layer 3 interface. Configure a new local administrator account. Edit a pre- rule.

Answer: C

Explanation:

Basic Concept: Panorama supports central configuration tasks without context switch. Operational actions that query live device state or configure local runtime views require firewall context.

Why C is Correct: Editing a post-rule, creating a certificate profile, and configuring hostname are Panorama- managed tasks available from the Panorama UI.

Why A is Wrong: Download and install a new content update. View current firewall session details. Initiate a device reboot. is related to management or logging, but it does not provide the required Panorama operation, rule hierarchy behavior, or dual-log forwarding outcome.

Why B is Wrong: Create a new zone. Configure a new virtual router. View the local ACC on the firewall. is related to management or logging, but it does not provide the required Panorama operation, rule hierarchy behavior, or dual-log forwarding outcome.

Why D is Wrong: Modify the IP address of a Layer 3 interface. Configure a new local administrator account.

Edit a pre-rule. is related to management or logging, but it does not provide the required Panorama operation, rule hierarchy behavior, or dual-log forwarding outcome.

NEW QUESTION # 86

An organization needs a GlobalProtect solution that meets two key requirements:

- IT administrators must be able to run scripts and push updates to endpoints before a user logs in.
- Users must authenticate with their cloud identity provider, which is protected by multi-factor authentication (MFA).

Which GlobalProtect authentication configuration should be used to meet both requirements?

- A. Single authentication profile using Kerberos to handle both pre-logon and user logon.
- B. SAML authentication for pre-logon and certificate-based authentication for user logon.
- C. Certificate-based authentication for pre-logon and SAML authentication for user logon.
- D. Cookie-based authentication for both pre-logon and user logon.

Answer: C

Explanation:

Pre-logon requires certificate-based authentication so the device can establish the tunnel before user login, enabling IT administrators to run scripts and push updates at the machine level. User logon must use SAML authentication to integrate with the cloud identity provider and enforce MFA for user authentication.

NEW QUESTION # 87

In an authentication sequence, what happens if the "Continue on client cert failure" option is enabled?

- A. The firewall will skip client certificate authentication and proceed to the next authentication profile in the sequence.
- B. The firewall will prompt the user to provide a valid client certificate.
- C. The firewall will log the failure and terminate the session.
- D. The firewall will deny access if the client certificate is invalid.

Answer: A

NEW QUESTION # 88

An engineer is configuring a site-to-site IPSec VPN to a partner network. The IKE Gateway and IPSec tunnel configurations are complete, and the tunnel interface has been assigned to a security zone. However, the tunnel fails to establish, and no application traffic passes through it once it is up. Which two Security policy configurations are required to allow tunnel establishment and data traffic flow in this scenario? (Choose two answers)

- A. A single bidirectional security rule must be configured to manage traffic flowing through the tunnel interface.
- B. Security rules must be configured to permit application traffic from the local zone to the tunnel zone, and from the tunnel zone to the local zone.
- C. An Application Override policy is needed to allow both the IKE negotiation and the encapsulated data traffic.
- D. A security rule is needed to allow IKE and IPSec traffic between the zone where the physical interface resides and the zone of the partner gateway.

Answer: B,D

Explanation:

Establishing a functional IPSec VPN on a Palo Alto Networks Next-Generation Firewall requires addressing two distinct traffic flows: the management of the tunnel itself (Control Plane) and the transit of protected data (Data Plane).

First, to address the failure of the tunnel to establish, the firewall must have a security policy that permits the negotiation protocols. Specifically, a rule is required to allowike(UDP/500),ipsec-esp-udp(UDP/4500 if NAT- T is used), andipsec-esp(IP Protocol 50) between the source zone (where the firewall's public-facing interface resides) and the destination zone (where the partner's gateway resides). Since the firewall is the endpoint for this negotiation, the destination zone is often the "local" zone or the specific external zone where the peer's IP is located.

Second, once the tunnel is established, the firewall must be configured to allow the actual application traffic.

In the Palo Alto Networks zone-based architecture, traffic entering or exiting an IPSec tunnel is associated with a Tunnel Interface. This interface must be assigned to a security zone. Because the default behavior for interzone traffic is to "Deny," the engineer must explicitly create a pair of security rules: one to allow traffic from the internal network zone to the tunnel interface's zone, and another

to allow returning traffic from the tunnel interface's zone back to the internal zone. Without these rules, the tunnel may appear "active" in the logs, but all encapsulated production data will be dropped.

NEW QUESTION # 89

According to dynamic updates best practices, what is the recommended threshold value for content updates in a mission-critical network?

- A. 48 hours
- B. 16 hours
- **C. 8 hours**
- D. 32 hours

Answer: C

Explanation:

For a mission-critical network, it is recommended to configure the content update threshold to 8 hours. This ensures that the network is protected with the latest threat intelligence, updates to signatures, and other critical content, minimizing the exposure to newly discovered vulnerabilities and threats.

Regular content updates are crucial in mission-critical environments to ensure the firewall is up-to-date with the latest protections. 8 hours is considered an optimal balance between timely updates and network performance.

NEW QUESTION # 90

.....

There may be some other study materials with higher profile and lower price than our products, but we can assure you that the passing rate of our NGFW-Engineer learning materials is much higher than theirs. And this is the most important. According to previous data, 98 % to 99 % of the people who use our NGFW-Engineer Training Questions passed the exam successfully. If you are willing to give us a trust on our NGFW-Engineer exam questions, we will give you a success.
