VMware vSphere 8.x Professional Sample Questions (Q75-Q80):

NEW QUESTION # 75

An administrator decides to restore VMware vCenter from a file-based backup following a failed upgrade. Which interface should the administrator use to complete the restore?

- A. vCenter GUI Installer
- **B. vCenter Management Interface (VAMI)**
- C. Direct Console User Interface (DCUI)
- D. vSphere Client

Answer: B

Explanation:

Explanation

The interface that should be used to complete the restore of vCenter Server from a file-based backup is vCenter Management Interface (VAMI), which allows accessing the backup and restore functionality of vCenter Server Appliance.

NEW QUESTION # 76

Which two datastore types store the components of a virtual machine as a set of objects? (Choose two.)

- **A. vSphere Virtual Volumes (vVols)**
- B. Network File System (NFS) 4.1
- C. Network File System (NFS) 3
- **D. VMware vSAN**
- E. VMware Virtual Machine File System (VMFS)

Answer: A,D

Explanation:

Option B and D are correct because they are the datastore types that store the components of a virtual machine as a set of objects, which are logical containers that abstract physical storage resources. Option A, C and E are incorrect because they are the datastore types that store the components of a virtual machine as a set of files, which are stored on a file system that resides on a physical storage device. NEW QUESTION # 77

An administrator has a requirement to revert a running virtual machine to a previous snapshot after a failed attempt to upgrade an application. When the administrator originally took the snapshot, the following choices in the Take Snapshot dialog were made:

* Snapshot the virtual machine's memory = false

* Quiesce guest file system = false

What will be the result of the administrator selecting the 'Revert to Latest Snapshot?' option to return the virtual machine to a previous snapshot? (Choose two.)

- A. The virtual machine will be restored in a powered on state
- B. The virtual machine will be restored to the child snapshot
- C. The virtual machine will be restored in a suspended state
- **D. The virtual machine will be restored in a powered off state**
- **E. The virtual machine will be restored to the parent snapshot**

Answer: D,E

NEW QUESTION # 78

During the staging of a patch on a vCenter Server Appliance, an error was encountered and the process stopped. An administrator resolved the root cause and is ready to continue with the staging of the patch.

From the vCenter Management Interface, which action should the administrator take to continue the process from the point at which the error occurred?

- A. Use the Unstage option to restart the staging.
- B. Use the Stage and Install option to resume the staging.
- C. Use the Stage Only option to restart the staging.
- **D. Use the Resume option to resume the staging.**

Answer: D

NEW QUESTION # 79

An administrator is tasked with adding two additional hosts into an existing production vSphere cluster to support the need for additional capacity.

The vSphere cluster currently has four identically configured ESXi hosts (esx01, esx02, esx03 and esx04) that utilize Intel Skylake-based CPUs. The two new hosts (esx05 and esx06) are configured identically in terms of memory and storage to the existing hosts; but utilize Intel Ice Lake-based CPUs.

The administrator must ensure that:

- * Any virtual machine migrates to any of the six ESXi hosts running in the cluster.
- * There is no virtual machine downtime during the process of adding the new hosts.

Which step should the administrator take to meet these requirements?

- A. Create a new vSphere cluster with vSphere High Availability (HA) enabled and move all hosts into the new cluster
- B. Create a new vSphere cluster and move only three hosts into the new cluster.
- C. Create a new vSphere cluster with Enhanced vMotion Compatibility (EVC) enabled and move all hosts into the new cluster
- **D. Configure Enhanced vMotion Compatibility (EVC) mode on the existing cluster and add the two new hosts into the cluster.**

Answer: D

Explanation:

The step that the administrator should take to meet these requirements is to configure Enhanced vMotion Compatibility (EVC) mode on the existing cluster and add the two new hosts into the cluster. EVC mode allows migration of virtual machines between different generations of CPUs by masking unsupported processor features. EVC mode can be enabled on an existing cluster without affecting powered-on virtual machines.
