Scrum SAFe-Practitioner (SP) is a certification program designed to validate the skills and knowledge required to lead a successful SAFe (Scaled Agile Framework) implementation. SAFe Practitioner Exam (6.0) certification is offered by Scaled Agile, Inc. and is targeted at individuals who are involved in the planning, execution, and delivery of Agile programs using SAFe methodology. The SAFe 5 Practitioner (SP) exam is the final step towards earning the certification.

## Scrum SAFe Practitioner Exam (6.0) Sample Questions (Q244-Q249):

### NEW QUESTION # 244

Which basic Agile quality practice reduces bottlenecks & ensures consistency?

- A. Definition of Done
- B. Collective ownership and standards
- C. Peer-review and pairing
- **D. Establish flow**

**Answer: D**

Explanation:

Establishing flow is a basic Agile quality practice that reduces bottlenecks and ensures consistency by removing errors, rework, and other waste that slows throughput. It also supports faster learning and feedback by shifting left on the timeline. Flow is one of the four core values of SAFe and a key principle of the Lean- Agile Mindset. References: Built-In Quality, SAFe Core Values, Lean-Agile Mindset

### NEW QUESTION # 245

What is the basic building block when organizing around value?

- A. Hierarchies
- B. Agile Release Trains
- **C. Agile Teams**
- D. Individuals

**Answer: C**

Explanation:

Agile Teams are the basic building block when organizing around value in SAFe. They are cross-functional, self-organizing, and empowered to deliver value in short iterations. They are aligned to a common mission and vision through the Agile Release Train (ART), which is a long-lived team of Agile Teams that delivers value streams. Agile Teams apply Scrum, Kanban, and XP practices to collaborate and deliver solutions that meet customer needs and provide business value. References: Agile Teams, Agile Release Trains, Exam Study Guide: SP (6.0) - SAFe Practitioner

### NEW QUESTION # 246

As the ART matures, teams typically migrate from \_\_\_\_\_ teams to \_\_\_\_\_ teams

- A. feature, component
- **B. component, feature**
- C. cross-functional, self-organizing
- D. smaller, bigger

**Answer: B**

### NEW QUESTION # 247

What is used to capture the current state of the Portfolio and provide input for defining the future state?

- A. Portfolio Kanban
- **B. Portfolio Canvas**
- C. Portfolio Backlog
- D. Portfolio Vision

**Answer: B**

Explanation:

The Portfolio Canvas is a tool that defines the current state of the portfolio, as well as the future state vision, using the Business Model Canvas template<sup>1</sup>. It describes the development value streams, the solutions they deliver, the customers they serve, the budget allocated to each value stream, and other vital activities and events required to achieve the portfolio vision<sup>2</sup>. The Portfolio Canvas is used to capture and analyze the current state of the portfolio, as well as to generate and evaluate multiple future state scenarios, based on the SWOT and TOWS analysis<sup>2</sup>. The Portfolio Canvas provides input for defining the future state vision and the portfolio backlog<sup>2</sup>. References: Business Model Canvas, Portfolio Vision

#### NEW QUESTION # 248

A cumulative flow diagram focuses on which curves?

- A. Arrival curve ("to do") and evolution curve ("change")
- B. Backlog curve ("work") and departure curve ("done")
- C. Implementation curve ("movement") and departure curve ("done")
- **D. Arrival curve ("to-do") and departure curve ("done")**

**Answer: D**

Explanation:

cumulative flow diagram (CFD) is a graphical tool that shows the status of work items for a given period of time. The horizontal axis represents time, and the vertical axis represents the number of work items. The CFD is composed of different colored bands, each representing a different stage of the workflow (such as "to do", "in progress", "done", etc.). The CFD helps visualize the flow of work, identify bottlenecks, and monitor cycle time and throughput<sup>1</sup>. A cumulative flow diagram focuses on two main curves: the arrival curve and the departure curve. The arrival curve is the top edge of the "to do" band, and it shows the rate at which new work items are added to the system. The departure curve is the top edge of the "done" band, and it shows the rate at which work items are completed and delivered. The difference between the arrival curve and the departure curve represents the amount of work in progress (WIP) in the system<sup>2</sup>. By comparing the arrival curve and the departure curve, one can assess the stability and predictability of the system. Ideally, the arrival curve and the departure curve should be parallel and close to each other, indicating a smooth and consistent flow of work. If the arrival curve is steeper than the departure curve, it means that more work is entering the system than leaving it, which can lead to increased WIP, longer cycle time, and lower quality. If the departure curve is steeper than the arrival curve, it means that more work is leaving the system than entering it, which can lead to reduced WIP, shorter cycle time, and higher quality<sup>3</sup>. References: Cumulative Flow Diagram - Scaled Agile Framework, Cumulative Flow Diagrams - Kanbanize, Cumulative Flow Diagram - LeSS
