In which type of extensibility is the SAP Business Technology Platform used to host a custom extension?

- A. Classic extensibility

- B. Developer extensibility
- **C. Side-by-side extensibility**
- D. Key user extensibility

Answer: C

Explanation:

In SAP S/4HANA Cloud Public Edition, side-by-side extensibility leverages the SAP Business Technology Platform (BTP) to host custom extensions. Here's why this is the correct answer:

* Side-by-side extensibility (B): This approach involves developing and deploying custom applications on the SAP BTP, which runs independently of the core S/4HANA system. It allows for greater flexibility and scalability while ensuring minimal impact on the core system.

* Classic extensibility (A): Classic extensibility refers to modifications made directly within the SAP system, which is not supported in the public cloud edition due to its standardized nature.

* Key user extensibility (C): Key user extensibility allows for in-app customizations, such as adding fields or logic, but it does not involve hosting extensions on SAP BTP.

* Developer extensibility (D): Developer extensibility typically refers to custom developments within the system, which is limited in the public cloud edition.
