Spark-Tech

Out here, you live and die by gasoline and steel. But the cities run on a different kind of juice. Spark-Tech is what the road crews call the gear that "falls off the back of a truck" from Torque-Dyne's military contracting wing—the "Civic Solutions Division." It's alien technology to you—no pistons, no grease, just silent, weird power. It's powerful, but it's unreliable, and it feels like a betrayal of everything you stand for. But sometimes, it's the only thing that'll save your skin.

Using Spark-Tech

When you find a piece of Spark-Tech, the Chronicler will tell you what it does.

Spark-Tech has a limited number of uses, or Charges. When you pick up an item, roll a d4 to see how many Charges it has left. Once the Charges are gone, the device is just a useless brick.

To activate a piece of Spark-Tech, you must pass a GEARs Test (DR 12). You don't really understand this stuff, and getting it to work is a gamble.

Success: The device works as intended. You expend one Charge.

Failure: It goes wrong. Roll on the Misfire Table below. You still expend one charge.

Spark-Tech Misfires (d6)	
1	Power Drain. The device sputters and dies, using up all remaining charges. You take d4 damage as your nerves jolt.
2	Wrong Target. It works perfectly! On you. Or your bike. Or your closest ally.
3	Loud & Bright. The device works, but with a blinding flash and a deafening shriek that attracts every scavenger and patrol within a mile.
4	Overcharge. The device works, but it burns out in the process. It uses up all its remaining Charges in one go.
5	Feedback Loop. The device shorts out violently. Take d6 damage and you have Disadvantage on all Gears Tests until you can get a good night's sleep.
6	Explosive Failure. The device detonates in your hands. Take d8 damage and the tech is utterly destroyed.

Are you still feeling uncomfortable about giving up a lot of time to entertain, work or accompany your family and friends in preparation for the exam? Using 100-160 Quiz torrent, you can spend less time and effort reviewing and preparing, which will help you save a lot of time and energy. When some candidates trying to overcome an exam, they will all first think of choosing a good study material to prepare for their exam. The Cisco Certified Support Technician (CCST) Cybersecurity prep torrent has a variety of self-learning and self-assessment functions to test learning outcome, which will help you increase confidence to pass exam.

Cisco 100-160 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Incident Handling: This section of the exam measures the skills of an Incident Responder and centers on recognizing security incidents, responding appropriately, and containing threats—forming the essential foundation of incident response procedures.

Topic 2	<ul style="list-style-type: none"> Endpoint Security Concepts: This section of the exam measures the skills of an Endpoint Security Specialist and includes securing individual devices, understanding protections such as antivirus, patching, and access control at the endpoint level, essential for maintaining device integrity.
Topic 3	<ul style="list-style-type: none"> Basic Network Security Concepts: This section of the exam measures the skills of a Network Defender and focuses on understanding network-level protections, including firewalls, VPNs, and intrusion detection prevention systems, providing insight into how threats are mitigated within network environments.
Topic 4	<ul style="list-style-type: none"> Vulnerability Assessment and Risk Management: This section of the exam measures the skills of a Risk Management Analyst and entails identifying and assessing vulnerabilities, understanding risk priorities, and applying mitigation strategies that help manage threats proactively within an organization's systems
Topic 5	<ul style="list-style-type: none"> Essential Security Principles: This section of the exam measures the skills of a Cybersecurity Technician and covers foundational cybersecurity concepts such as the CIA triad (confidentiality, integrity, availability), along with basic threat types and vulnerabilities, laying the conceptual groundwork for understanding how to protect information systems.

Latest Updated Cisco 100-160 New Real Exam: Cisco Certified Support Technician (CCST) Cybersecurity | Reliable 100-160 Exam Bootcamp

If you want to buy our 100-160 training guide in a preferential price, that's completely possible. In order to give back to the society, our company will prepare a number of coupons on our 100-160 learning dumps. And the number of our free coupon is limited. So you should click our website frequently. What's more, our coupon has an expiry date. You must use it before the deadline day. What are you waiting for? Come to buy our 100-160 Practice Engine at a cheaper price!

Cisco Certified Support Technician (CCST) Cybersecurity Sample Questions (Q271-Q276):

NEW QUESTION # 271

Your home network seems to have slowed down considerably. You look at the home router GUI and notice that an unknown host is attached to the network.

What should you do to prevent this specific host from attaching to the network again?

- A. Create an IP access control list.
- **B. Implement MAC address filtering.**
- C. Block the host IP address.
- D. Change the network SSID.

Answer: B

Explanation:

The CCST Cybersecurity course explains that MAC address filtering is a network access control method that allows only approved device hardware addresses to connect. While not foolproof against spoofing, it can block a specific device from reconnecting to a small home network.

"MAC address filtering restricts network access to devices whose unique hardware addresses are explicitly allowed. This can be used to block known unauthorized devices from reconnecting." (CCST Cybersecurity, Basic Network Security Concepts, Wireless Security Controls section, Cisco Networking Academy) A is incorrect: IP ACLs are better for controlling traffic types, not blocking specific devices at the router level.

B is correct: It prevents the device's hardware address from reconnecting.

C is temporary since the host can get a new IP via DHCP.

D may hide the network but will not stop a determined attacker who can still detect it.

NEW QUESTION # 272

What is the primary advantage of using reputation-based detection as a threat intelligence technique?

- A. It can detect new or emerging threats based on their behaviors.
- B. It requires less computational resources compared to other techniques.
- C. It provides real-time detection of zero-day threats.
- D. **It helps block threats based on their historical behavior or reputation.**

Answer: D

Explanation:

Reputation-based detection uses information about the historical behavior or reputation of entities (such as IP addresses or domains) to determine their threat level. It helps in blocking threats known for their malicious activities.

NEW QUESTION # 273

What is the purpose of encryption in network security?

- A. To authenticate and authorize users
- B. **To protect the confidentiality and integrity of data during transmission**
- C. To prevent unauthorized physical access to network devices
- D. To monitor and detect network attacks

Answer: B

Explanation:

Encryption is the process of transforming data into an unintelligible form (ciphertext) to protect its confidentiality and integrity during transmission. It ensures that even if the data is intercepted, it cannot be understood or modified without the encryption key. Encryption helps in safeguarding sensitive information from unauthorized access and tampering.

NEW QUESTION # 274

Which security feature provides network segmentation by creating virtual networks?

- A. **VLANs**
- B. VLANs
- C. Virtual Private Network (VPN)
- D. Intrusion Prevention System (IPS)

Answer: A

Explanation:

Option 1: Correct, VLANs (Virtual Local Area Networks) provide network segmentation by creating virtual networks, allowing different groups of devices to be logically separated on the same physical network.

Option 2: Incorrect, Firewalls are designed to monitor and filter network traffic based on predetermined security rules, but they do not provide network segmentation by creating virtual networks.

Option 3: Incorrect, An Intrusion Prevention System (IPS) is a security appliance or software that monitors network traffic for suspicious activity and takes action to prevent potential threats, but it does not provide network segmentation by creating virtual networks.

Option 4: Incorrect, A Virtual Private Network (VPN) is a secure tunnel between two or more devices, typically used to connect remote sites or allow remote users to access the private network. It does not provide network segmentation by creating virtual networks.

NEW QUESTION # 275

Which network security concept focuses on limiting network access based on user roles and responsibilities?

- A. Network segmentation
- B. **Access control**
- C. Vulnerability scanning
- D. Intrusion detection

Answer: B

Explanation:

Access control is a network security concept that focuses on limiting network access based on user roles and responsibilities. It ensures that users are granted appropriate permissions and privileges based on their job functions. Access control mechanisms can include username/password authentication, multi-factor authentication, and role-based access control (RBAC).

NEW QUESTION # 276

In today's society, there are increasingly thousands of people put a priority to acquire certificates to enhance their abilities. With a total new perspective, 100-160 study materials have been designed to serve most of the office workers who aim at getting an exam certification. Moreover, 100-160 Exam Questions have been expanded capabilities through partnership with a network of reliable local companies in distribution, software and product referencing for a better development. That helping you pass the 100-160 exam successfully has been given priority to our agenda.
