

Best Accurate Latest GitHub-Actions Exam Cost by Real4test

What's more, part of that Real4test GitHub-Actions dumps now are free: <https://drive.google.com/open?id=10om7KmfTebO2ZHKRmMF2V6Wi2y1RL-V2>

Our company sells three kinds of GitHub-Actions guide torrent online whose contents are definitely same as each other, including questions and answers. The only distinct thing is that they have different ways to use. The PDF format of GitHub-Actions exam torrent is easy to download, prints, and browse learning, which can be printed on paper and can make notes anytime. You can learn anywhere, repeated practice, and use in unlimited number of times. SOFT/PC test engine of GitHub-Actions exam applies to Windows system computers. It can simulate the real operation test environment. The number of Download and install are unlimited. The number of computers of using GitHub-Actions Questions torrent is unlimited too. App/online test engine of the GitHub-Actions guide torrent is designed based on a Web browser, as long as a browser device is available. It has the functions of simulating examination, limited-timed examination and online error correcting.

GitHub GitHub-Actions Exam Syllabus Topics:

Topic	Details
Topic 1	Automate development tasks by using GitHub Actions: This section of the exam measures the skills of DevOps Engineers and covers the fundamentals of GitHub Actions. It focuses on understanding action types, planning automation workflows, and creating container actions. One skill to be measured is creating workflows triggered by repository events.
Topic 2	Create and publish custom GitHub actions: This section of the exam measures the skills of Software Engineers and covers the creation and publication of custom GitHub actions.
Topic 3	Manage GitHub Actions in the enterprise: This section of the exam measures the skills of GitHub Managers and covers managing GitHub Actions at the enterprise level. It emphasizes tools for action and workflow management, runner configurations, and encrypted secrets usage. A skill to be measured is customizing self-hosted runners for enterprise use cases.
Topic 4	Leverage GitHub Actions to publish to GitHub Packages: This section of the exam measures the skills of Software Engineers and Package Managers and covers the use of GitHub Actions for publishing to GitHub Packages. It focuses on setting up CI workflows for package publishing and authentication. One skill to be measured is configuring workflows to publish to package registries.

For any candidate, choosing the GitHub-Actions question torrent material is the key to passing the exam. Our study materials can fully meet all your needs: Avoid wasting your time and improve your learning efficiency. Spending little hours per day within one week, you can pass the exam easily. You will don't take any risks and losses if you purchase and learn our GitHub-Actions Latest Exam Dumps, do you?

GitHub Actions Certificate Exam Sample Questions (Q65-Q70):

NEW QUESTION # 65

As a developer, how can you identify a Docker container action on GitHub?

- A. The action's repository includes @actions/core in the root directory.
- B. The action.yml metadata file references a Dockerfile file.
- C. The action's repository name includes the keyword "Docker."
- D. The action.yml metadata file has the runs.using value set to Docker.

Answer: D

Explanation:

In a Docker container action, the action.yml file includes the runs.using field, which is set to docker to specify that the action runs inside a Docker container. This is the key indicator that the action is a Docker container action.

NEW QUESTION # 66

Which choices represent best practices for publishing actions so that they can be consumed reliably? (Choose two.)

- A. default branch
- B. repo name
- C. tag
- D. commit SHA
- E. organization name

Answer: C,D

Explanation:

Using a tag is a best practice because tags are immutable and represent a fixed version of your action. By referencing tags, consumers of your action can be assured they are using a stable and specific version of the action, which helps in avoiding issues with breaking changes.

The commit SHA is another reliable way to specify a particular version of an action. By referencing a specific commit SHA, consumers can ensure they are using exactly the code that was written at that moment, avoiding the potential for changes in the future.

NEW QUESTION # 67

What menu options in a repository do you need to select in order to use a starter workflow that is provided by your organization?

- A. Actions > New workflow
- B. Actions > Load workflow
- C. Workflow > New workflow
- D. Workflow > Load workflow

Answer: A

Explanation:

To use a starter workflow provided by your organization, you need to go to the Actions tab in the repository and select New workflow. This option allows you to either create a new workflow or select from a list of available workflow templates, including starter workflows provided by your organization.

NEW QUESTION # 68

GitHub-hosted runners support which capabilities? (Choose two.)

- A. support for a variety of Linux variations including CentOS, Fedora, and Debian
- B. requiring a payment mechanism (e.g., credit card) to use for private repositories
- C. automatic file-system caching between workflow runs
- D. automatic patching of both the runner and the underlying OS
- E. support for Linux, Windows, and mac

Answer: A,E

Explanation:

GitHub-hosted runners automatically handle patching, meaning they will be kept up to date with the latest security updates and software patches for both the runner environment and the underlying operating system.

GitHub-hosted runners support Linux, Windows, and macOS, giving you flexibility to run workflows on different operating systems without needing to manage your own self-hosted runners.

NEW QUESTION # 69

You have exactly one Windows x64 self-hosted runner, and it is configured with custom tools. Which syntax could you use in the workflow to target that runner?

- A. self-hosted: [windows, x64]
- B. runs-on: windows-latest
- C. self-hosted: [windows-x64]
- D. runs-on: [self-hosted, windows, x64]

Answer: D

Explanation:

The runs-on keyword allows you to specify the operating system and other labels for the runner. By specifying self-hosted, windows, and x64, you are targeting a self-hosted Windows runner that matches these criteria, which aligns with the custom configuration of your self-hosted runner.

NEW QUESTION # 70

.....

In today's society, there are increasingly thousands of people put a priority to acquire certificates to enhance their abilities.
