Best Analytics-Admn-201 Preparation Materials - Analytics-Admn-201 Valid Test Preparation

You may want to own a Analytics-Admn-201 certificate to prove that you are competent and boost excellent practical abilities in some certain area. Thus you will be regarded as the capable people and be respected. Passing the test Analytics-Admn-201 certification can help you realize your goals and if you buy our Analytics-Admn-201 Guide Torrent you will pass the Analytics-Admn-201 exam easily. Our Analytics-Admn-201 exam questions are written by the most professional experts, so the quality of our Analytics-Admn-201 learning material is wonderful. And we always keep our Analytics-Admn-201 study guide the most updated for you to pass the exam.

After taking a bird's eye view of applicants' issues, TestInsides has decided to provide them with the Real Analytics-Admn-201 Questions. These Salesforce Certified Tableau Server Administrator (Analytics-Admn-201) dumps pdf is according to the new and updated syllabus so they can prepare for Salesforce certification anywhere, anytime, with ease. A team of professionals has made the product of TestInsides after much hard work with their complete potential so the candidates can prepare for Salesforce practice test in a short time.

Newest Salesforce - Best Analytics-Admn-201 Preparation Materials

Salesforce Analytics-Admn-201 exam is an popular examination of the IT industry, and it is also very important. We prepare the best study guide and the best online service specifically for IT professionals to provide a shortcut. TestInsides Salesforce Analytics-Admn-201 Exam covers all the content of the examination and answers you need to know. Tried Exams ot TestInsides, you know this is something you do everything possible to want, and it is really perfect for the exam preparation.

Salesforce Certified Tableau Server Administrator Sample Questions (Q50-Q55):

NEW QUESTION # 50
To which site role can you associate the Viewer user-based license level?

- A. Viewer
- B. Explorer (can publish)
- C. Creator
- D. Explorer

Answer: A

Explanation:
Tableau Server uses a role-based licensing model with three primary license levels: Creator, Explorer, and Viewer. Each license level corresponds to specific site roles that define what users can do on the server.
Viewer License: This is the most restrictive license, allowing users to view and interact with published content (e.g., dashboards and visualizations) but not to create or publish new content.
Site Role: The Viewer license can only be associated with the Viewer site role. This role restricts users to viewing capabilities, aligning with the license's purpose.
Option A (Creator): Incorrect. The Creator license is for users who can create, edit, and publish content using Tableau Desktop and the web interface. It corresponds to the Creator site role, not Viewer.
Option B (Explorer (can publish)): Incorrect. This is a variation of the Explorer license, which allows users to edit and publish content within limits. It's more permissive than Viewer.
Option C (Viewer): Correct. The Viewer site role matches the Viewer license level perfectly.
Option D (Explorer): Incorrect. The Explorer license allows users to explore data and create content in the web interface, exceeding the Viewer license's capabilities.
Reference: Tableau Server Documentation - "User Site Roles and Licenses" (https://help.tableau.com/current

/server/en-us/license_usage.htm).

NEW QUESTION # 51
Which two settings should you configure to allow users to post comments on a visualization? (Choose two.)

- A. Add Comments must be allowed in permissions for the relevant users
- B. Comments must be enabled on the site Settings page
- C. The relevant users must have a minimum site role of Explorer (can publish)
- D. Comments must be enabled on the server Settings page

Answer: A,B

Explanation:
Comments on visualizations foster collaboration in Tableau Server-let's break down the requirements:
* Commenting Prerequisites:
* Site-Level Enablement: Comments must be activated for the site.
* Permission: Users need the "Add Comment" capability on the content.
* Site Role: Minimum role of Viewer allows commenting if permissions are set.
* Option B (Add Comments must be allowed in permissions): Correct.
* Details: In the Permissions dialog (e.g., for a workbook), set "Add Comment" to "Allowed" for users/groups. Default is "Denied" unless explicitly enabled.
* How: Content > Workbooks > Actions > Permissions > Edit Rule.
* Why: Permissions are granular-site enablement alone isn't enough.
* Option D (Comments must be enabled on the site Settings page): Correct.
* Details: Go to Site > Settings > General > Allow Comments-check the box.
* Why: This is a site-wide toggle (default: off). Without it, no one can comment, regardless of permissions.
* Option A (Minimum site role of Explorer - can publish): Incorrect.
* Why: Viewer role suffices if permissions allow-Explorer (can publish) isn't required (it adds publishing, not commenting).
* Option C (Server Settings page): Incorrect.
* Why: Comments are a site-level feature, not server-wide-no such toggle exists in TSM's Server Settings.
Why This Matters: Enabling comments at both site and content levels ensures controlled collaboration-key for team insights.
Reference: Tableau Server Documentation - "Enable Comments" (https://help.tableau.com/current/server/en-us/comment.htm#enable).

NEW QUESTION # 52
What is the minimum hardware recommendation for a single-node production installation of Tableau Server?

- A. 2-Core CPU (1.8 GHz or higher), 8 GB RAM, 15 GB free disk space
- B. 4-Core CPU (2.0 GHz or higher), 64 GB RAM, 50 GB free disk space
- C. 4-Core CPU (2.0 GHz or higher), 16 GB RAM, 50 GB free disk space
- D. 8-Core CPU (2.0 GHz or higher), 32 GB RAM, 50 GB free disk space

Answer: D

Explanation:
Tableau Server's minimum hardware recommendations for a production single-node deployment ensure reliable performance for small to medium workloads. As of the latest documentation:
* CPU: 8 cores (2.0 GHz or higher) to handle concurrent users, rendering, and background tasks.
* RAM: 32 GB to support in-memory processing (e.g., VizQL, Data Engine) and caching.
* Disk Space: 50 GB free for installation, logs, extracts, and temporary files.
Let's break it down:
* Option C (8-Core CPU, 32 GB RAM, 50 GB free disk space): Correct. This matches Tableau's official minimum for production:
* 8 cores ensure sufficient parallelism for processes like Backgrounder and VizQL.
* 32 GB RAM supports multiple users and extract refreshes.
* 50 GB disk space accommodates growth (initial install is ~1-2 GB, but logs and extracts expand).
* Option A (4-Core, 16 GB RAM, 50 GB): Incorrect. Too low for production-4 cores and 16 GB RAM are below the threshold for reliable performance under load.
* Option B (2-Core, 8 GB RAM, 15 GB): Incorrect. This is for non-production (e.g., trial) setups, insufficient for production stability.

* Option D (4-Core, 64 GB RAM, 50 GB): Incorrect. 4 cores are inadequate, though 64 GB RAM exceeds the minimum (32 GB).
Why This Matters: Under-spec hardware can lead to slow performance, failed refreshes, or crashes in production-adhering to the minimum ensures stability.
Reference: Tableau Server Documentation - "Minimum Hardware Recommendations" (https://help.tableau. com/current/server/en-us/requirements.htm).

NEW QUESTION # 53
What are two intervals when Tableau Server verifies if data conditions for data-driven alerts are true? (Choose two.)

- A. Every 10 minutes
- B. Whenever a new extract is published
- C. Every 60 minutes
- D. Whenever extracts in the related workbook are refreshed

Answer: C,D

Explanation:
Data-driven alerts notify users when data meets conditions (e.g., sales > $10K). Let's examine when Tableau checks these:
* Alert Mechanics:
* Enabled per site (Settings > General > Data-Driven Alerts).
* Backgrounder evaluates conditions against extract data.
* Check Intervals: Configurable via tsm configuration set -k dataAlerts.checkIntervalInMinutes (default: 60 minutes).
* Refresh Trigger: Also checks post-extract refresh for immediate updates.
* Option A (Every 60 minutes): Correct.
* Details: Default interval-Backgrounder polls every hour to evaluate alert conditions.
* Config: Adjustable (e.g., -v 30 for 30 minutes).
* Option D (Whenever extracts in the related workbook are refreshed): Correct.
* Details: An extract refresh updates the data, triggering an immediate alert check to catch changes promptly.
* Why: Ensures timely notifications without waiting for the next poll.
* Option B (Every 10 minutes): Incorrect.
* Why: Not the default-possible via config, but not standard.
* Option C (Whenever a new extract is published): Incorrect.
* Why: Publishing creates the extract; alerts trigger on refreshes or polling, not initial publication.
Why This Matters: Timing affects alert responsiveness-balancing frequency and server load is key.
Reference: Tableau Server Documentation - "Data-Driven Alerts" (https://help.tableau.com/current/server/en- us/data_alerts.htm).

NEW QUESTION # 54
Which two options can be configured by a server administrator per site? (Choose two.)

- A. Ability to embed credentials
- B. Limitation on storage space
- C. Limitation on number of users
- D. Language and locale

Answer: B,D

Explanation:
Tableau Server supports multi-tenancy via sites, each with customizable settings managed by server or site administrators. Let's analyze what's configurable per site:
* Site Settings: Found in the web UI under Site > Settings > General. Server admins can override site admin settings.
* Option B (Limitation on storage space): Correct.
* Details: Server admins can set a storage quota per site (e.g., 100 GB) to cap disk usage for extracts and workbooks.
* How: In TSM or site settings (if enabled)-e.g., tsm configuration set -k site.storage.quota -v 100000.
* Impact: Prevents one site from monopolizing resources in multi-site deployments.
* Option D (Language and locale): Correct.
* Details: Each site can set its language (e.g., English, French) and locale (e.g., date/number formats).
* How: Site settings UI-e.g., "Language: French, Locale: France."
* Impact: Tailors the user experience per site's audience.

* Option A (Ability to embed credentials): Incorrect.
* Details: Embedding credentials (e.g., in data sources) is a server-wide setting (tsm data-access), not per-site. Site admins can't override it.
* Option C (Limitation on number of users): Incorrect.
* Details: User limits are tied to licenses (server-wide), not configurable per site. Site admins manage user assignments, not quotas.
Why This Matters: Site-specific settings enable tailored governance and resource allocation in multi-tenant environments.
Reference: Tableau Server Documentation - "Site Settings" (https://help.tableau.com/current/server/en-us/site_settings.htm).

NEW QUESTION # 55

......

Don't let the Salesforce Certified Tableau Server Administrator exam stress you out! Prepare with our Analytics-Admn-201 exam dumps and boost your confidence in the Analytics-Admn-201 exam. We guarantee your road toward success by helping you prepare for the Analytics-Admn-201 exam. Use the best Salesforce Analytics-Admn-201 practice questions to pass your Analytics-Admn-201 Exam with flying colors! In this way, the Salesforce Certified Tableau Server Administrator certified professionals can not only validate their skills and knowledge level but also put their careers on the right track. By doing this you can achieve your career objectives.
