What's more, C-TS414-2023 exam dumps are high quality, and you can pass the exam just one time. We offer you free update for 365 days after purchasing, and our system will send the update version for C-TS414-2023 exam dumps to you automatically.

SAP Certified Associate - SAP S/4HANA Cloud Private Edition, Quality Management Sample Questions (Q10-Q15):

NEW QUESTION # 10
After you create customer master records, you define second inspection related default specification in the ....

Which of the followings options can you use to control when the quality inspection take place (2 correct ans)

- A. The inspection occurs after the release of the sales order
- B. The inspection occurs after the transport order is quit.
- C. The inspection occurs before the good issue in posted
- D. The inspection occurs after the good issue in posted

Answer: C,D

NEW QUESTION # 11
Which of the following can you use to explore released APIs?

- A. SAP Business Accelerator Hub
- B. SAP Application Interface Framework
- C. SAP Integration Suite

Answer: A

Explanation:
To explore released APIs in SAP S/4HANA:
* SAP Business Accelerator Hub (B): Formerly SAP API Business Hub, this is the official platform (https://api.sap.com) to explore, test, and access released APIs for SAP S/4HANA, including QM- related APIs (e.g., Inspection Lot API). It's the standard tool as of 2025.
* SAP Application Interface Framework (A): AIF is for monitoring and managing interfaces, not exploring APIs.
* SAP Integration Suite (C): This is for building integrations, not a primary API exploration tool.
Thus, "SAP Business Accelerator Hub" is the correct answer (single-choice context assumed).References:
SAP Help Portal - "SAP Business Accelerator Hub"; SAP S/4HANA Developer Guide - "APIs".

NEW QUESTION # 12
you can assign combination of material number and plants to one inspection plan Which organization structure must the plants share for correct cost collection in the inspection handlings ?

- A. Purchase organization
- B. Controlling Area
- C. Sales organization
- D. Company code

Answer: B

NEW QUESTION # 13
What conditions must be met to record inspection results for the inspection lot? Note: There are 2 correct answers to this question.

- A. The sample determination has been performed for the inspection lot
- B. The inspection operations are released for inspection results recording
- C. The inspection methods are part of the inspection specifications
- D. The inspection specifications have been assigned to the inspection lot

Answer: A,B

Explanation:
To record inspection results for an inspection lot (e.g., transaction QE51N):
* The Sample Determination Has Been Performed for the Inspection Lot (A): The lot must have its sample size calculated (status "SAMP" or "INSP") based on the sampling procedure, a prerequisite for result entry (SPRO > QM > Quality Inspection > Sample Management).
* The Inspection Operations Are Released for Inspection Results Recording (B): Operations in the inspection plan must be released (status REL) to allow result recording, ensuring the lot is ready (transaction QP01).
* The Inspection Methods Are Part of the Inspection Specifications (C): Methods guide execution but aren't a condition for recording.

* The Inspection Specifications Have Been Assigned to the Inspection Lot (D): Specs (e.g., material specs) are linked implicitly via the plan, not a separate condition.
Thus, "The sample determination has been performed for the inspection lot" and "The inspection operations are released for inspection results recording" are the correct answers.References: SAP Help Portal - "Prerequisites for Results Recording"; SAP S/4HANA QM User Guide - "Inspection Lot Processing".

NEW QUESTION # 14

You are using the SAP Fiori app "Record Inspection Results" in the quality inspection. Which types of results recording are possible? Note: There are 2 correct answers to this question.

- A. Classed inspection results recording
- B. Results recording for inspection points
- C. Recording of single inspection results
- D. Summarized inspection results recording

Answer: C,D

Explanation:
The SAP Fiori app "Record Inspection Results" (App ID: F2170) in SAP S/4HANA QM supports specific result recording types for inspection lots:
* Recording of Single Inspection Results (B): This allows entering individual values for quantitative or qualitative characteristics (e.g., one value per sample), a standard feature in the app for detailed recording.
* Summarized Inspection Results Recording (D): The app supports entering a single aggregated value (e.g., average) for a characteristic, ideal for summarized quantitative data, as configured in the MIC control indicators.
* Classed Inspection Results Recording (A): Classed recording (grouping results into ranges) is supported in classic transactions (e.g., QE51N) but not explicitly in the standard Fiori app's functionality.
* Results Recording for Inspection Points (C): While inspection points are supported in QM, the Fiori app focuses on lot-level recording and doesn't emphasize point-specific recording in its standard scope.
Thus, "Recording of single inspection results" and "Summarized inspection results recording" are the correct answers.References: SAP Help Portal - "Record Inspection Results Fiori App"; SAP S/4HANA QM User Guide - "Fiori Apps in QM".
