You must believe that you have extraordinary ability to work and have an international certificate to prove your inner strength. You will definitely be the best one among your colleagues. The help you provide with our Salesforce-AI-Specialist Learning Materials is definitely what you really need. And if you study with our Salesforce-AI-Specialist exam braindumps, you will know your dream clearly. Join Salesforce-AI-Specialist study guide and you will be the best person!

Salesforce Certified AI Specialist Exam Sample Questions (Q78-Q83):

NEW QUESTION # 78

An AI Specialist needs to create a prompt template to fill a custom field named Latest Opportunities Summary on the Account object with information from the three most recently opened opportunities.

How should the AI Specialist gather the necessary data for the prompt template?

- A. Select the latest Opportunities related list as a merge field.
- **B. Create a flow to retrieve the opportunity information.**
- C. Select the Account Opportunity object as a resource when creating the prompt template.

Answer: B

Explanation:

To gather the necessary data for populating the Latest Opportunities Summary custom field on the Account object with information from the three most recently opened opportunities, the AI Specialist should create a flow. A flow can be configured to query and retrieve the required opportunity records based on criteria such as their open date. Once the flow has gathered the necessary data, it can be used in a prompt template or other automation processes to populate the custom field on the Account record.

* Option A is correct because creating a flow allows for dynamic data retrieval and control over the logic for selecting the most recent opportunities.

* Option B and Option C do not provide sufficient control or data retrieval capabilities needed for this scenario.

NEW QUESTION # 79

Universal Containers is using Einstein Copilot for Sales to find similar opportunities to help close deals faster.

The team wants to understand the criteria used by the copilot to match opportunities.

What is one criteria that Einstein Copilot for Sales uses to match similar opportunities?

- A. Matched opportunities are limited to the same account.
- **B. Matched opportunities have a status of Closed Won from last 12 months.**
- C. Matched opportunities were created in the last 12 months.

Answer: B

Explanation:

When Einstein Copilot for Sales matches similar opportunities, one of the primary criteria used is whether the opportunities have a status of Closed Won within the last 12 months. This is a key factor in identifying successful patterns that could help close current deals. By focusing on opportunities that have been recently successful, Einstein Copilot can provide relevant insights and suggestions to sales reps to help them close similar deals faster.

For more information, review Salesforce Einstein Copilot documentation related to opportunity matching and sales success patterns.

NEW QUESTION # 80

An AI Specialist wants to ground a new prompt template with the User related list.

What should the AI Specialist consider?

- A. The User related list should have View All access.
- **B. The User related list is not supported in prompt templates.**
- C. The User related list needs to be included on the record page.

Answer: B

Explanation:

An AI Specialist wants to ground a new prompt template with the User related list. Grounding in prompt templates involves using

data from related lists to provide context or additional information to the Large Language Model (LLM) when generating responses.

Key Consideration:

* Unsupported Related Lists in Prompt Templates:

* Limitation: The User related list is not supported in prompt templates for grounding purposes.

* Reason: Salesforce restricts certain objects and related lists from being used in prompt templates to maintain data security and integrity. The User object often contains sensitive information and is subject to strict access controls.

* Impact: Attempting to use the User related list in a prompt template will not work as expected because the system does not support it.

Why Options A and B are Incorrect:

* Option A (The User related list should have View All access):

* Incorrect: Even with View All access, the User related list is still not supported in prompt templates.

* Security Concerns: Granting View All access to the User object is a significant security risk and not a recommended practice.

* Option B (The User related list needs to be included on the record page):

* Incorrect: Including the User related list on the record page does not affect its availability in prompt templates.

* Irrelevance: The placement of the related list on the record page does not change the system's ability to access it in a prompt template.

References:

* Salesforce AI Specialist Documentation - Prompt Templates Limitations:

* Details the objects and related lists that are not supported in prompt templates.

* Salesforce Help - Data Access in Prompt Templates:

* Explains how data access and security considerations affect the use of objects in prompt templates.

* Salesforce Trailhead - Understanding Prompt Template Grounding:

* Provides insights into grounding prompt templates and the limitations involved.

Conclusion:

Since the User related list is not supported in prompt templates, the AI Specialist must consider alternative approaches. They might need to redesign the prompt template to use supported objects or related lists, or explore other methods to incorporate necessary user information while adhering to Salesforce's data access policies.

NEW QUESTION # 81

An AI Specialist wants to use the related lists from an account in a custom prompt template.

What should the AI Specialist consider when configuring the prompt template?

- A. The maximum number of related list merge fields
- B. The text encoding (for example, UTF-8, ASCII) option
- C. The choice between XML and JSON rendering formats for the list

Answer: A

Explanation:

When configuring a custom prompt template to use related lists, the AI Specialist must be aware of the maximum number of related list merge fields that can be included. Salesforce enforces limits to ensure prompt templates perform efficiently and do not overload the system with too much data. As a best practice, it's important to monitor and optimize the number of merge fields used.

Option B is correct because there is a limit on how many related list merge fields can be included in a prompt template.

Option A (text encoding) and Option C (XML/JSON rendering) are not key considerations in this context.

NEW QUESTION # 82

Universal Containers is considering leveraging the Einstein Trust Layer in conjunction with Einstein Generative AI Audit Data.

Which audit data is available using the Einstein Trust Layer?

- A. Masked data and toxicity score
- B. Hallucination score and bias score
- C. Response accuracy and offensiveness score

Answer: A

Explanation:

Universal Containers is considering the use of the Einstein Trust Layer along with Einstein Generative AI Audit Data. The Einstein
