## CPC-CDE-RECERT New Exam Bootcamp - Your Reliable Support to Pass CyberArk CDE-CPC Recertification

When you purchase CPC-CDE-RECERT exam dumps from Pass4suresVCE, you never fail CPC-CDE-RECERT exam ever again. We bring you the best CPC-CDE-RECERT exam preparation dumps which are already tested rigorously for their authenticity. Start downloading your desired CPC-CDE-RECERT Exam product without any second thoughts. Our CPC-CDE-RECERT products will make you pass in first attempt with highest scores. We accept the challenge to make you pass CPC-CDE-RECERT exam without seeing failure ever!

### CyberArk CDE-CPC Recertification Sample Questions (Q53-Q58):

#### NEW QUESTION # 53

Before the hardening process, your customer identified a PSM Universal Connector executable that will be required to run on the PSM. Which file should you update to allow this to run?

- A. PSMConfigureHardening.xml
- B. PSMAppConfig.xml
- **C. PSMConfigureAppLocker.xml**
- D. PSMHardening.xml

**Answer: C**

Explanation:

To allow a PSM Universal Connector executable to run on the PSM after the hardening process, you should update the PSMConfigureAppLocker.xml file. This file configures AppLocker, which is a feature that controls which apps and files users can run on a system. Including the necessary executable in the PSMConfigureAppLocker.xml ensures it is whitelisted by AppLocker policies, thus permitted to execute even under the hardened security settings of the PSM environment. References to this configuration can be found in the CyberArk Privilege Session Manager implementation documentation, specifically in sections detailing customization and security hardening of environment configurations.

#### NEW QUESTION # 54

What are the basic network requirements to deploy a CPM server?

- A. Port 1858 only
- B. Port UDP/1858 to the Privilege Cloud Vault service backend and all required ports to the targets and Port 3389 to the PSM
- C. any ports to the Privilege Cloud Vault service backend
- **D. Port 1858 to the Privilege Cloud Vault service backend and Port 443 to the Privilege Cloud Portal**

**Answer: D**

Explanation:

The basic network requirements to deploy a CyberArk Privilege Management Central Policy Manager (CPM) server include Port 1858 to the Privilege Cloud Vault service backend and Port 443 to the Privilege Cloud Portal. Port 1858 is necessary for communication with the CyberArk Vault, facilitating essential interactions like password retrieval and updates. Port 443 is required for secure web traffic to and from the Privilege Cloud Portal, ensuring that all management tasks performed through the web interface are secure and encrypted. These ports must be properly configured to allow for the efficient and secure operation of the CPM within the Privilege Cloud infrastructure.

#### NEW QUESTION # 55

When creating a new safe, what is the default number of password versions stored if using 'Save latest account versions' within version management settings?

- **A. 0**
- B. 1
- C. 2
- D. 3

**Answer: A**

Explanation:

CyberArk's Safe creation documentation explains that when you choose "Save the last <number> account versions" (also shown as "Save latest account versions" in some UIs), the Safe retains the most recent password versions indefinitely by keeping a fixed number of versions and rolling off the oldest. It also states that by default, the last five password versions are stored.

#### NEW QUESTION # 56

In addition to CyberArk, which additional licensing implication does the PSM have?

- A. Microsoft Office
- B. GCP
- **C. RDS CALs**
- D. AWS

**Answer: C**

Explanation:

PSM relies on Microsoft Remote Desktop Services capabilities on Windows, and CyberArk documentation /knowledge articles call out RDS CAL considerations for PSM deployments (including guidance on CAL type implications, especially with Windows Server 2019 licensing enforcement behavior).

### NEW QUESTION # 57

(Typing correction / missing stem noted)

Your last item only lists answer choices (no question text). Based on Privilege Cloud documentation, these choices most commonly appear with the question:

"Which tools can be used to upgrade Privilege Cloud Connector components (CPM/PSM)?" (Choose two.)

- A. Connector Management Installer
- B. Component Installer
- C. Privilege Cloud Installer
- D. Privilege Cloud Auto Installer
- E. Connector Configurator

**Answer: A,C**

Explanation:

CyberArk documents that for upgrading Privilege Cloud connector components, there are two upgrade tools:

\* Connector Management installer (recommended)

\* Privilege Cloud installer (legacy)

That corresponds to B and C.

### NEW QUESTION # 58

.....

Whatever CPC-CDE-RECERT Exam, you are taking; the study guides of Pass4suresVCE are there to help you get through the exam without any hassle. The questions and answers are absolutely exam oriented, focusing only the most essential part of your exam syllabus. Thus they save your time and energy going waste in thumbing through the unnecessary details.
