

100% Pass 2026 C-S43-2601: SAP Certified Implementation Consultant - SAP S/4HANA Cloud Private Edition, Asset Management (C_S43_2601)–High Hit-Rate Knowledge Points

SAP CERTIFICATION

I believe that people want to have good prospects of career whatever industry they work in. Of course, there is no exception in the competitive IT industry. IT Professionals working in the IT area also want to have good opportunities for promotion of job and salary. A lot of IT professional know that SAP Certification C-S43-2601 Exam can help you meet these aspirations. PassCollection is a website which help you successfully pass SAP C-S43-2601.

If you fail, don't forget to learn your lesson. If you still prepare for your test yourself and fail again and again, it is time for you to choose a valid C-S43-2601 study guide; this will be your best method for clearing exam and obtain a certification. Good C-S43-2601 study guide will be a shortcut for you to well-directed prepare and practice efficiently, you will avoid do much useless efforts and do something interesting. PassCollection releases 100% pass-rate C-S43-2601 Study Guide files which guarantee candidates 100% pass exam in the first attempt.

Pdf C-S43-2601 Pass Leader & Latest C-S43-2601 Exam Cram

PassCollection constantly attract students to transfer their passion into progresses for the worldwide feedbacks from our loyal clients prove that we are number one in this field to help them achieve their dream in the C-S43-2601 exams. For we have the guarantee of high quality on our C-S43-2601 exam questions, so our C-S43-2601 practice materials bring more outstanding teaching effect. And instead of the backward information accumulation of learning together can make students feel great burden, our latest C-S43-2601 exam guide can meet the needs of all kinds of students on validity or accuracy.

SAP Certified Implementation Consultant - SAP S/4HANA Cloud Private Edition, Asset Management (C_S43_2601) Sample Questions (Q10-Q15):

NEW QUESTION # 10

Create a Task List

The project team evaluates during the implementation project Task Lists in SAP S/4HANA Asset Management. The following features need to be checked:

- * Create a Task List header
- * Create Task List operations
- * Create a Task List with 3 Task List operations. Maintenance Strategy Z### comprises Maintenance Packages with different hierarchy levels.

Use the following information at header level of the Task List:

□ Use the following information for each Task List operation:

- * Assign Maintenance Packages to the Task List Operations as follows:
- * Operation 10 is to be performed monthly.
- * Operation 20 is to be performed every 4 months.
- * Operation 30 is to be performed every 12 months.

Answer:

Explanation:

See the Explanation for complete Solution of this Task.

Explanation:

Since we encountered that error with the Z48 strategy , we must ensure that is fixed before we can finish the Task List. Here is the complete, verified, step-by-step process to finalize Task 7 , including the "hidden" pre- requisite.

Task 7: Create a General Task List

Objective : To create a standardized template of maintenance steps that can be automatically pulled into future work orders based on a schedule.

Step 1: The Pre-requisite (Fixing Strategy Z48)

If you haven't done this yet, SAP will not let you save the Task List.

- * Transaction : IP11 (Maintain Maintenance Strategies).
- * Action : Click New Entries .
- * Strategy : Z48
- * Description : Strategy for Group 48
- * Strategy Unit : MON (Months).
- * Packages : On the left, double-click Packages , then click New Entries :
- * Line 1 : Cycle 1 / Unit MON / Text Monthly
- * Line 2 : Cycle 4 / Unit MON / Text Every 4 Months
- * Line 3 : Cycle 12 / Unit MON / Text Yearly
- * Save (Floppy Disk icon).

Explanation : A strategy is the "calendar" that defines how often work happens. Without this, the system doesn't know what "Monthly" or "Yearly" means.

Step 2: Create Task List Header

- * Transaction : IA05 .
- * Initial Screen : Group TL-48, Group Counter 1. Press Enter .
- * Header Fields :
- * Description : Regular Maintenance GR48
- * Planning Plant : 1010
- * Work Center : MK-00 / Plant : 1010
- * Usage : 4 (Plant Maintenance)
- * Status : 4 (Released)
- * Planner Group : P48
- * Maint. Strategy : Z48

Explanation : The header defines who is responsible for the work (Planner Group P48) and which scheduling rules (Strategy Z48) apply to the whole list.

Step 3: Create Operations

- * Click the Operations button (F6) at the top.
- * Enter three rows with this data:
- * Op 10 : Work Center MK-00, Plant 1010, Control Key PM01, Work 30, Unit MIN.
- * Op 20 : (Same as above).
- * Op 30 : (Same as above).

Explanation : Operations are the actual steps the technician follows. Here, we are saying each step takes 30 minutes of mechanical labor.

Step 4: Assign Maintenance Packages (The "Frequencies")

This is the most important part of Task 7. We tell SAP which operation happens when.

- * Select Row 10 (click the box at the far left of the row).
 - * Go to Menu: Goto > Maintenance Packages .
 - * Check the box for the 1 Month package. Click the Back (Green Arrow) icon.
 - * Select Row 20 .
 - * Go to Goto > Maintenance Packages and check the 4 Month package. Click Back .
 - * Select Row 30 .
 - * Go to Goto > Maintenance Packages and check the 12 Month package. Click Back .
- Explanation : Now, SAP knows that Op 10 happens every month, but Op 30 only happens once a year.
- Step 5: Save
- * Click the Save icon.
 - * The message at the bottom should say: "Task list TL-48 saved with group counter 1" .

NEW QUESTION # 11

Check Inspection Lot and record Inspection Results

The project team evaluates during the implementation project the checking of Inspection Lots Checklist processing including result recording. The following features need to be checked:

- * Display the automatically created Inspection Lot
- * Record Inspection Results
- * Display the automatically created Inspection Lot for the previously created Maintenance Order including Checklist. The Inspection Lot comprises the following data:
 - * Record Inspection Results for the previously created Inspection Lot so that the Usage Decision is automatically set to Can be used

Answer:

Explanation:

See the Explanation for complete Solution of this Task.

Explanation:

Task 13 Overview

This task focuses on the quality management (QM) integration with maintenance. You will verify the inspection lot that was automatically triggered by your maintenance order and then record the results to confirm the technical object is fit for use.

Step 1: Display the Automatically Created Inspection Lot

Before recording results, you must verify that the system generated the correct inspection lot for your maintenance order.

- * Access the Transaction : Enter QA03 (Display Inspection Lot) in the command field and press Enter .
- * Locate the Lot : Search for the inspection lot associated with the maintenance order you created in Task 12.
- * Verify the Following Data :
- * Material : T-PM1100
- * Plant : 1010
- * Inspection Lot Origin : 89 (Miscellaneous)
- * Group : CL-DE-00
- * Group Counter : 1

Explanation : The inspection lot is the central record for quality testing. Seeing these specific values (Group CL-DE-00) confirms that the classification you set up in Task 11 correctly triggered the intended inspection plan.

Step 2: Record Inspection Results

This is the process of entering the actual findings from the checklist inspection.

- * Access the Transaction : You can navigate directly from the Inspection Lot in QA03 or use transaction QE51N (Results Recording Selection).
- * Select the Lot : Enter your inspection lot number and click Execute .
- * Record Results :
- * Enter the inspection values for each characteristic listed in the checklist.
- * Ensure the values you enter are within the "Acceptable" range or marked as "Pass".
- * Automatic Usage Decision : Record the results such that the Usage Decision (UD) is automatically set to "Can be used" .
- * Save : Click the Save (floppy disk) icon.

Explanation : By recording positive results, you satisfy the quality requirements for the maintenance task.

The automatic transition to "Can be used" status tells the system the pump has passed inspection and the maintenance order can proceed toward completion.

NEW QUESTION # 12

Task: 5

Configure and create a Maintenance Notification

The project team evaluates during the implementation project the Maintenance Notifications in SAP S/4HANA Asset Management. The following features need to be checked:

- * Configure and create a Maintenance Notification
- * Assign catalog specific data to a Maintenance Notification
- * Create a Maintenance Notification and save it. Use the following information:
- * Assign the following data to the just created notification:
-

Answer:

Explanation:

See the Explanation for complete Solution of this Task.

Explanation:

Task 5 Overview

The project team is evaluating Maintenance Notifications in SAP S/4HANA Asset Management. This task involves creating a notification and assigning catalog-specific data to it.

Step 1: Create the Maintenance Notification

In this step, you will record a technical problem in the system.

* Access the Transaction : Use transaction code IW21 (Create Maintenance Notification) in the SAP GUI or the corresponding Fiori app.

* Initial Screen :

* Notification Type : Enter Z1 .

* Press Enter .

* Enter General Data :

* Description : Enter Pump is leaking .

* Priority : Select High .

* Equipment : Enter T-PA48 .

* Save : Click the Save (floppy disk) icon to generate a notification number.

Explanation : Creating a notification is the first step in the maintenance process. It documents the "what" (leaking pump), the "how critical" (high priority), and the "where" (Equipment T-PA48).

□ Step 2: Assign Catalog Specific Data

Now you must assign technical codes to describe the damage precisely for future reporting and analysis.

* Access the Transaction : Use transaction code IW22 (Change Maintenance Notification) to open your recently created notification.

* Navigate to Item Data : Go to the Items tab or the relevant section for damage and causes.

* Enter Damage Details :

* Damage Code Group : PMP-100 .

* Damage Code : 1000 .

* Description : Leaking .

* Enter Object Part Details :

* Object Part Code Group : PMP-Z48 .

* Object Part Code : 1001 .

* Description : Inlet/Outlet .

* Enter Cause Details :

* Cause Code Group : PMP-248 .

* Cause Code : 2000 .

* Description : Material fatigue .

* Save : Click the Save icon to finalize the notification.

Explanation : Assigning catalog data categorizes the issue using standardized codes. This allows the company to run "Bad Actor" reports later to see, for example, how many pumps are failing due to "Material fatigue" versus "Operator error".

□

NEW QUESTION # 13

Create a Maintenance Order with Checklists

The project team evaluates during the implementation project Maintenance Orders with Checklists in SAP S/4HANA Asset Management. The following features need to be checked:

- * Create a Maintenance Order with Checklist
- * Display a Maintenance Order with automatically generated Object List and Checklist.

- * Create a Maintenance Order using an Order Type which is already configured for the checklist process.
- Use the following data:
- * Display the previously created Maintenance Order with automatically generated Object List and Checklist.

Answer:

Explanation:

See the Explanation for complete Solution of this Task.

Explanation:

Task 12 Overview

In this task, you will create a maintenance order using a specific order type configured for the checklist process. The system will then automatically generate an object list and a corresponding checklist based on the equipment and task list assigned.

Step 1: Create a Maintenance Order with Checklist

You need to create a new order using a functional location and a specific task list that triggers the checklist functionality.

- * Access the Transaction : Use transaction code IW31 (Create Maintenance Order).
- * Initial Screen :
- * Order Type : Select an order type already configured for the checklist process (typically PM01 or a specific custom type designated for checklists in your training environment).
- * Press Enter .
- * Enter Header and Location Data :
- * Functional Location : Enter 48-01-PRD-01-03-HD .
- * Description : Enter a relevant description (e.g., Pump Checklist Maintenance GR48).
- * Assign the Task List :
- * Go to the Operations tab or find the task list assignment section.
- * General Maintenance Task List : Enter A / T-PMCLEN / 1 .
- * Press Enter to validate.
- * Save : Click the Save (floppy disk) icon.

Explanation : By assigning this specific functional location and general task list, you are triggering the "Checklist" integration. The system uses the classification data you set up in Task 11 to determine that a checklist (inspection lot) is required for this job.

Step 2: Display and Verify the Checklist

After saving, you must verify that the system correctly generated the technical components of the checklist.

- * Display the Order : Use transaction code IW33 and enter the order number you just created.
- * Verify the Object List :
- * Navigate to the Object List tab.
- * You should see the equipment or functional location listed here with a link to the checklist.
- * Verify the Checklist :
- * Look for a button or tab labeled Checklists or Inspection Lot within the order.
- * The system should show that a checklist has been automatically generated for the repair operations.

Explanation : The goal of this step is to confirm that the "Object List" and "Checklist" were created automatically by the system. This proves the background configuration for QM (Quality Management) integration is working correctly with your maintenance order

NEW QUESTION # 14

Create a Maintenance Plan

The project team evaluates during the implementation project Maintenance Plans in SAP S/4HANA Asset Management. The following features need to be checked:

Create a Maintenance Plan

Create a Maintenance Plan and save it. Use the following information:

□

Answer:

Explanation:

See the Explanation for complete Solution of this Task.

Explanation:

Task 8: Create a Maintenance Plan

The objective of this task is to create a strategy-based maintenance plan that will automatically generate work orders for your pump based on the frequencies defined in your task list.

Step 1: Access the Transaction

- * Transaction Code : Enter IP42 in the command field and press Enter .
- * Initial Screen :

* Maintenance Plan Category : Select Maintenance Order (or "Maintenance plan for Maintenance Order" if using the Fiori Launchpad).

* Maintenance Strategy : Enter Z48 .

* Press Enter .

Step 2: Enter Header and Maintenance Item Data

Once you are on the main creation screen, fill in the "Maintenance Item" section to define what is being maintained and how the orders should look:

* Description : Enter Regular pump maintenance Z48 .

* Equipment : Enter T-PA48 .

* Planning Plant : This should default to 1010 based on the equipment, but ensure it is correct.

* Order Type : Enter PM02 .

Explanation : By assigning Equipment T-PA48 and Order Type PM02 , you are telling SAP to generate a specific "Planned" maintenance order every time this schedule is triggered.

Step 3: Link the Task List

This step connects the plan to the specific maintenance steps (operations) you created in Task 7.

* Look for the Task List section at the bottom of the screen.

* Task List Type : Enter A (General Task List).

* Group : Enter TL-48 .

* Counter : Enter 1 .

* Press Enter to validate the connection. You should see the description "Regular Maintenance GR48" appear.

Explanation : Linking the Task List ensures that when the maintenance plan generates an order, it automatically copies the 30-minute operations you defined earlier into that order.

Step 4: Set Scheduling Parameters (Optional but Recommended)

While the table in your document focuses on the data above, typically you would click the Maintenance Plan Scheduling Parameters tab to ensure the "Scheduling Period" and "Start Date" are set. However, for the assessment, the mandatory data is what we entered in Steps 1-3.

Step 5: Save

* Click the Save (floppy disk) icon.

* Note your Maintenance Plan Number : The system will display a message at the bottom, such as

"Maintenance plan 123 saved." Write this number down , as you will need it for Task 9: Schedule a Maintenance Plan .

Task 8 is now complete! You have built the automated "brain" that will handle the recurring maintenance for your pump.

NEW QUESTION # 15

.....

PassCollection gives a guarantee to our customers that they can pass the SAP C-S43-2601 Certification Exam on the first try by preparing from the PassCollection and if they fail to pass it despite their efforts they can claim their payment back as per terms and conditions. PassCollection facilitates customers with a 24/7 support system which means whenever they get stuck somewhere they don't struggle and contact the support system which will assist them in the right way. A lot of students have prepared from practice material and rated it positively.
