300-710 Dumps Cost - Reliable 300-710 Test Simulator

The clients can use the shortest time to prepare the exam and the learning only costs 20-30 hours. The questions and answers of our 300-710 Exam Questions are refined and have simplified the most important information so as to let the clients use little time to learn. The client only need to spare 1-2 hours to learn our Securing Networks with Cisco Firepower study question each day or learn them in the weekends. Commonly speaking, people like the in-service staff or the students are busy and don't have enough time to prepare the exam. Learning our Securing Networks with Cisco Firepower test practice dump can help them save the time and focus

their attentions on their major things.

Cisco Securing Networks with Cisco Firepower Sample Questions (Q321-Q326):

NEW QUESTION # 321

An organization wants to secure traffic from their branch office to the headquarter building using Cisco Firepower devices, They want to ensure that their Cisco Firepower devices are not wasting resources on inspecting the VPN traffic. What must be done to meet these requirements?

- A. Enable a flexconfig policy to re-classify VPN traffic so that it no longer appears as interesting traffic
- B. Tune the intrusion policies in order to allow the VPN traffic through without inspection
- C. Configure the Cisco Firepower devices to ignore the VPN traffic using prefilter policies
- D. Configure the Cisco Firepower devices to bypass the access control policies for VPN traffic.

Answer: A

NEW QUESTION # 322

An engineer is setting up a new Cisco Secure Firewall Threat Defense appliance to replace the current firewall. The company requests that inline sets be used and that when one interface in an inline set goes down, the second interface in the inline set goes down. What must the engineer configure to meet the deployment requirements?

- A. propagate link state
- B. Snort fail open
- C. inline tap mode
- D. strict TCP enforcement

Answer: A

Explanation:

In Cisco Secure Firewall Threat Defense deployments, propagate link state is a feature designed to manage interface behavior in inline sets. When inline sets are used, the network often requires that both interfaces in the set behave consistently; if one interface in the pair goes down, the other should automatically go down to prevent asymmetric routing or network issues. The Propagate Link State setting ensures that when one interface in an inline set experiences a failure, the paired interface automatically reflects that down status. This is critical in setups where symmetry and failover are essential, especially in high-availability or redundant network designs.

NEW QUESTION # 323

What is a feature of Cisco AMP private cloud?

- A. It disables direct connections to the public cloud.
- B. It supports security intelligence filtering.
- C. It performs dynamic analysis
- D. It supports anonymized retrieval of threat intelligence

Answer: A

Explanation:

Connecting a Firepower Management Center to an AMP private cloud disables existing direct connections to the public AMP cloud.

https://www.cisco.com/c/en/us/td/docs/security/firepower/620/configuration/guide/fpmc-config_guide-v62/file_policies_and_amp_for_firepower.html

NEW QUESTION # 324

What is a behavior of a Cisco FMC database purge?

- A. The specified data is removed from Cisco FMC and kept for two weeks.

- B. The appropriate process is restarted.
- C. Data can be recovered from the device.
- D. User login and history data are removed from the database if the User Activity check box is selected.

Answer: B

Explanation:

You can use the database purge page to purge discovery, identity, connection, and Security Intelligence data files from the FMC databases. Note that when you purge a database, the appropriate process is restarted.

NEW QUESTION # 325

Drag and drop the steps to restore an automatic device registration failure on the standby Cisco FMC from the left into the correct order on the right. Not all options are used.

Enter the "configure manager add" command at the CLI of the affected device.	Step 1
Unregister the device from the standby Cisco FMC.	Step 2
Register the affected device on the active Cisco FMC.	Step 3
Enter the "configure manager delete" command at the CLI of the affected device.	Step 4
Register the affected device on the standby Cisco FMC.	
Unregister the device from the active Cisco FMC.	

Answer:

Explanation:

Enter the "configure manager add" command at the CLI of the affected device.	Unregister the device from the active Cisco FMC.
Unregister the device from the standby Cisco FMC.	Enter the "configure manager delete" command at the CLI of the affected device.
Register the affected device on the active Cisco FMC.	Enter the "configure manager add" command at the CLI of the affected device.
Enter the "configure manager delete" command at the CLI of the affected device.	Register the affected device on the active Cisco FMC.
Register the affected device on the standby Cisco FMC.	
Unregister the device from the active Cisco FMC.	

NEW QUESTION # 326

.....

In fact, on one side, our 300-710 training braidumps can help you pass the exam and win the certification. On the other side, I think it is even more important, that you can apply what you have learned on our 300-710 Practice Guide into practices. Your speed of finishing the task will be greatly elevated. Everting will take positive changes because of our 300-710 exam materials. Please cheer up for yourself.
