### Oracle Redwood Application 2025 Developer Associate Sample Questions (Q22-Q27):

#### NEW QUESTION # 22

What does a build pipeline in Visual Builder Studio do?

- A. Can only package an AppUI extension, which requires manual deployment
- B. **Can deploy an AppUI extension to multiple FA instances**
- C. Can only deploy an AppUI extension to a stand-alone VB instance
- D. Can deploy an AppUI extension to only a single FA instance

#### Answer: B

Explanation:

Full Detailed in Depth Explanation:

A build pipeline in Visual Builder Studio (VBS) automates the process of packaging, building, and deploying applications or extensions, including AppUI extensions for Oracle Fusion Applications (FA). It is designed to streamline Continuous Integration/Continuous Deployment (CI/CD) workflows. Option D is correct because VBS build pipelines can deploy AppUI extensions to multiple Fusion Application instances (e.g., development, test, and production environments) as configured in the pipeline settings. This flexibility is a key feature of VBS, allowing developers to target multiple environments without manual intervention. Option A is incorrect because deployment is not limited to stand-alone VB instances; it can target FA instances as well. Option B is wrong as it restricts deployment to a single FA instance, which contradicts VBS's multi-environment capability. Option C is inaccurate because the pipeline does more than just packaging—it automates deployment too.

#### NEW QUESTION # 23

What is the correct sequence of steps to understand a problem while designing the Redwood Reference Application?

- A. Describe the shape of data of your use case, gather feedback from product management and other stakeholders, write user goals, understand the problem, and iterate until you achieve clarity
- B. Gather feedback from product management and other stakeholders, write user goals, describe the shape of data of your use case, understand the problem, and iterate until you achieve clarity
- C. **Understand the problem, write user goals, describe the shape of data of your use case, gather feedback from product management and other stakeholders, and iterate until you achieve clarity**
- D. Write user goals, describe the shape of data of your use case, understand the problem, gather feedback from product management and other stakeholders, and iterate until you achieve clarity

#### Answer: C

Explanation:

Full Detailed in Depth Explanation:

Redwood's design process starts with understanding the problem (C), followed by defining goals, data, feedback, and iteration. Other sequences (A, B, D) misalign with this logical flow.

- B. Establish a JDBC connection to the Oracle Fusion Apps database
- C. **Use a service from the service catalog**

### NEW QUESTION # 25

Jane created an AppUI extension in a workspace. She wants Troy to test it before she pushes it to Git. How can she achieve this?

- A. By creating a shared workspace with Troy
- B. By pushing the changes to a shared branch before pushing it to Git
- C. By clicking the Publish button in her workspace
- D. By choosing the Share option from the menu

### Answer: D

Explanation:

Full Detailed in Depth Explanation:

In VBS, Jane can share her workspace with Troy for testing using the "Share" option from the menu, allowing him to preview the AppUI extension without pushing to Git. Option A (shared workspace) isn't a standard feature—workspaces are individual. Option B (Publish) pushes changes to Git, not suitable for pre-Git testing. Option D involves Git, which Jane wants to avoid until testing is done.
