Amazon AWS Certified Cloud Practitioner Sample Questions (Q201-Q206):

NEW QUESTION # 201

Which AWS managed service is used to host databases?

- A. AWS Artifact
- B. AWS Data Pipeline
- **C. Amazon RDS**
- D. AWS Batch

Answer: C

Explanation:

Amazon Relational Database Service (Amazon RDS) makes it easy to set up, operate, and scale a relational database in the cloud. It provides cost-efficient and resizable capacity while automating time-consuming administration tasks such as hardware provisioning, database setup, patching and backups. It frees you to focus on your applications so you can give them the fast performance, high availability, security and compatibility they need.

NEW QUESTION # 202

Which of the following AWS services can be used to serve large amounts of online video content with the lowest possible latency? (Select TWO.)

- **A. Amazon S3**
- B. Amazon Elastic File System (EFS)
- **C. Amazon CloudFront**
- D. appGateway
- E. Amazon Glacier

Answer: A,C

NEW QUESTION # 203

A retail company is building a new mobile app. The company is evaluating whether to build the app at an on-premises data center or in the AWS Cloud. Which of the following are benefits of building this app in the AWS Cloud? (Select TWO.)

- **A. A large, upfront capital expense and low variable expenses**
- B. Complete control over the physical security of the infrastructure
- **C. Flexibility to scale up in minutes as the application becomes popular**
- D. Ability to pick the specific data centers that will host the application servers
- E. Increased speed for trying out new projects

Answer: A,C

NEW QUESTION # 204

A company created an application to consume and process data

a. The application uses Amazon Simple Queue Service (Amazon SQS) and AWS Lambda functions. The application is currently working as expected, but it occasionally receives several messages that it cannot process properly. The company needs to clear

these messages to prevent the queue from becoming blocked. A developer must implement a solution that makes queue processing always operational. The solution must give the company the ability to defer the messages with errors and save these messages for further analysis. What is the MOST operationally efficient solution that meets these requirements?

- **A. Create a new SQS queue. Set the new queue as a dead-letter queue for the application queue. Configure the Maximum Receives setting.**
- B. Configure an Amazon CloudWatch alarm for Lambda function errors. Publish messages to an Amazon Simple Notification Service (Amazon SNS) topic to notify administrator users.
- C. Configure Amazon CloudWatch Logs to save the error messages to a separate log stream.
- D. Change the SQS queue to a FIFO queue. Configure the message retention period to 0 seconds.

Answer: A

NEW QUESTION # 205

What is an example of high availability in the AWS Cloud?

- A. Making any AWS service available for use by paying on demand
- **B. Ensuring an application remains accessible, even if a resource fails**
- C. Deploying in any part of the world using AWS Regions
- D. Consulting AWS technical support at any time day or night

Answer: B
