

# Latest Databricks Databricks-Certified-Data-Engineer-Associate Test Pass4sure | Databricks-Certified-Data-Engineer-Associate Latest Dumps Book

P.S. Free 2026 Databricks Databricks-Certified-Data-Engineer-Associate dumps are available on Google Drive shared by Actual4Labs: [https://drive.google.com/open?id=1Uqrf2Aaon6J59XUYKpGjubW48bpRil\\_I](https://drive.google.com/open?id=1Uqrf2Aaon6J59XUYKpGjubW48bpRil_I)

Our Databricks Exam Questions greatly help Databricks Certified Data Engineer Associate Exam (Databricks-Certified-Data-Engineer-Associate) exam candidates in their preparation. Our Databricks-Certified-Data-Engineer-Associate practice questions are designed and verified by prominent and qualified Databricks Certified Data Engineer Associate Exam (Databricks-Certified-Data-Engineer-Associate) exam dumps preparation experts. The qualified Databricks Certified Data Engineer Associate Exam (Databricks-Certified-Data-Engineer-Associate) exam questions preparation experts strive hard and put all their expertise to ensure the top standard and relevancy of Databricks-Certified-Data-Engineer-Associate exam dumps topics.

The GAQM Databricks-Certified-Data-Engineer-Associate (Databricks Certified Data Engineer Associate) Certification Exam is designed to test the skills of data engineers who work with Databricks to build and maintain data pipelines. Databricks-Certified-Data-Engineer-Associate exam covers a wide range of topics, including data modeling, data ingestion, data transformation, and data analysis. Successful completion of the exam demonstrates that a candidate has the skills and knowledge required to work effectively as a data engineer with Databricks.

To prepare for the Databricks Certified Data Engineer Associate exam, candidates can take advantage of a range of resources, including study guides, practice exams, and training courses. Databricks-Certified-Data-Engineer-Associate Exam is administered online and can be taken from anywhere in the world. Successful candidates will receive a digital badge and a certificate that they can use to showcase their skills and knowledge to potential employers.

## Databricks-Certified-Data-Engineer-Associate Latest Dumps Book | Lab Databricks-Certified-Data-Engineer-Associate Questions

In today's society, the number of college students has grown rapidly. Everyone has their own characteristics. How do you stand out? Obtaining Databricks-Certified-Data-Engineer-Associate certification is a very good choice. Our Databricks-Certified-Data-Engineer-Associate study materials can help you pass test faster. You can take advantage of the certification. Many people improve their ability to perform more efficiently in their daily work with the help of our Databricks-Certified-Data-Engineer-Associate Exam Questions and you can be as good as they are.

## Databricks Certified Data Engineer Associate Exam Sample Questions (Q187-Q192):

### NEW QUESTION # 187

Which of the following data lakehouse features results in improved data quality over a traditional data lake?

- A. A data lakehouse enables machine learning and artificial Intelligence workloads.
- **B. A data lakehouse supports ACID-compliant transactions.**
- C. A data lakehouse provides storage solutions for structured and unstructured data.
- D. A data lakehouse stores data in open formats.
- E. A data lakehouse allows the use of SQL queries to examine data.

**Answer: B**

Explanation:

Explanation

One of the key features of a data lakehouse that results in improved data quality over a traditional data lake is its support for ACID (Atomicity, Consistency, Isolation, Durability) transactions. ACID transactions provide data integrity and consistency guarantees, ensuring that operations on the data are reliable and that data is not left in an inconsistent state due to failures or concurrent access. In a traditional data lake, such transactional guarantees are often lacking, making it challenging to maintain data quality, especially in scenarios involving multiple data writes, updates, or complex transformations. A data lakehouse, by offering ACID compliance, helps maintain data quality by providing strong consistency and reliability, which is crucial for data pipelines and analytics.

### NEW QUESTION # 188

A Python file is ready to go into production and the client wants to use the cheapest but most efficient type of cluster possible. The workload is quite small, only processing 10GBs of data with only simple joins and no complex aggregations or wide transformations. Which cluster meets the requirement?

- **A. Job cluster with spot instances enabled**
- B. Job cluster with Photon enabled
- C. Interactive cluster
- D. Job cluster with spot instances disabled

**Answer: A**

Explanation:

A job cluster with spot instances enabled is the cheapest and efficient option for small, production workloads. Spot instances reduce costs, and a job cluster ensures the cluster only runs during the workload execution.

### NEW QUESTION # 189

A data engineer has created a new database using the following command:

```
CREATE DATABASE IF NOT EXISTS customer360;
```

In which of the following locations will the customer360 database be located?

- A. dbfs:/user/hive/customer360
- B. More information is needed to determine the correct response
- C. dbfs:/user/hive/database/customer360
- **D. dbfs:/user/hive/warehouse**

**Answer: D**

Explanation:

dbfs:/user/hive/warehouse Thereby showing "dbfs:/user/hive/warehouse/customer360.db" The location of the customer360 database depends on the value of the spark.sql.warehouse.dir configuration property, which specifies the default location for managed databases and tables. If the property is not set, the default value is dbfs:/user/hive/warehouse. Therefore, the customer360 database will be located in dbfs:/user

/hive/warehouse/customer360.db. However, if the property is set to a different value, such as dbfs:/user/hive/database, then the customer360 database will be located in dbfs:/user/hive/database/customer360.db. Thus, more information is needed to determine the correct response.

Option A is not correct, as dbfs:/user/hive/database/customer360 is not the default location for managed databases and tables, unless the spark.sql.warehouse.dir property is explicitly set to dbfs:/user/hive/database.

Option B is not correct, as dbfs:/user/hive/warehouse is the default location for the root directory of managed databases and tables, not for a specific database. The database name should be appended with .db to the directory path, such as dbfs:/user/hive/warehouse/customer360.db.

Option C is not correct, as dbfs:/user/hive/customer360 is not a valid location for a managed database, as it does not follow the

directory structure specified by the spark.sql.warehouse.dir property.

#### NEW QUESTION # 190

A Python file is ready to go into production and the client wants to use the cheapest but most efficient type of cluster possible. The workload is quite small, only processing 10GBs of data with only simple joins and no complex aggregations or wide transformations. Which cluster meets the requirement?

- A. Job cluster with spot instances enabled
- B. Job cluster with Photon enabled
- C. Interactive cluster
- D. Job cluster with spot instances disabled

**Answer: A**

#### NEW QUESTION # 191

A data engineering team has noticed that their Databricks SQL queries are running too slowly when they are submitted to a non-running SQL endpoint. The data engineering team wants this issue to be resolved. Which of the following approaches can the team use to reduce the time it takes to return results in this scenario?

- A. They can increase the cluster size of the SQL endpoint.
- B. They can turn on the Serverless feature for the SQL endpoint and change the Spot Instance Policy to "Reliability Optimized."
- C. They can turn on the Serverless feature for the SQL endpoint.
- D. They can increase the maximum bound of the SQL endpoint's scaling range
- E. They can turn on the Auto Stop feature for the SQL endpoint.

**Answer: C**

Explanation:

Option D is the correct answer because it enables the Serverless feature for the SQL endpoint, which allows the endpoint to automatically scale up and down based on the query load. This way, the endpoint can handle more concurrent queries and reduce the time it takes to return results. The Serverless feature also reduces the cold start time of the endpoint, which is the time it takes to start the cluster when a query is submitted to a non-running endpoint. The Serverless feature is available for both AWS and Azure Databricks platforms.

Databricks SQL Serverless, Serverless SQL endpoints, New Performance Improvements in Databricks SQL

#### NEW QUESTION # 192

.....

The Actual4Labs is a leading platform that has been offering top-rated and real Databricks Certified Data Engineer Associate Exam (Databricks-Certified-Data-Engineer-Associate) exam questions for quick Databricks Certified Data Engineer Associate Exam Certification Exam. The Databricks-Certified-Data-Engineer-Associate exam questions are designed and verified by experienced and certified Databricks-Certified-Data-Engineer-Associate Exam trainers. They work collectively and put all their efforts, experience, and knowledge and ensure the top standard of Databricks-Certified-Data-Engineer-Associate exam questions all the time.
