WGU Introduction to Cryptography HNO1 Sample Questions (Q57-Q62):

NEW QUESTION # 57

(What is the length (in bits) of a SHA-1 hash output?)

- A. 0
- B. 1
- C. 2
- D. 3

Answer: C

Explanation:

SHA-1 (Secure Hash Algorithm 1) produces a fixed-size output of 160 bits (20 bytes). Hash output size matters in cryptography because it influences collision resistance and the effort required for various attacks. For an ideal n-bit hash, finding a collision by generic means is expected around $2^{n/2}$.
