## EMC Dell Midrange Storage Solutions Design 2023 Sample Questions (Q72-Q77):

### NEW QUESTION # 72

What is the minimum RPO that can be configured on a Dell Unity XT block-asynchronous replication session?

- A. 5 minutes
- B. 1 minute
- C. 60 minutes
- D. 20 minutes

**Answer: A**

Explanation:

The minimum RPO (Recovery Point Objective) that can be configured on a Dell Unity XT block- asynchronous replication session is 5 minutes. RPO is a measure of how much data can be lost in the event of a disaster, and it's typically measured in minutes. The lower the RPO, the less data can be lost. Block-asynchronous replication is a replication method that copies data blocks, rather than files, between the source and the target. The data is copied at regular intervals, and if a disaster occurs at any point in time, the data on the target will be no more than 5 minutes old.

The shorter the RPO, the more frequently data is copied and the less data is at risk of being lost in case of a disaster. It's important to note that this is the minimum RPO for block-asynchronous replication, it can be set to a higher value if needed.

### NEW QUESTION # 75

A storage administrator is trying to create a new hybrid pool on their Dell Unity XT 680.

They want to add:

- 18x3.84 TBSSD drives
- 72x 1200 GB 10K SAS drives
- 64x 12 TBNL SAS drives

However, this action is not being permitted by the Unity software.

What is the reason for this?

- A. There are too many disks in the SAS tier
- **B. 3.84 TB SSD are only supported in all flash pools**
- C. The pool must be created with only a single drive type
- D. 12 TB NLSAS drives are only permitted in archive pools

**Answer: B**

Explanation:

The storage administrator is not able to create a new hybrid pool on their Dell Unity XT 680 because the 3.84 TB SSD drives are only supported in all flash pools. Dell Unity XT supports the use of SSDs in all-flash pools, where the entire pool is built from SSD drives, to provide high performance for I/O-intensive workloads.
