Lead2PassExam is a legal authorized company offering the best EMC D-ISM-FN-01 test preparation materials. So for some candidates who are not confident for real tests or who have no enough time to prepare I advise you that purchasing valid and Latest D-ISM-FN-01 Test Preparation materials will make you half the efforts double the results. Our products help thousands of people pass exams and can help you half the work with double the results.

Our D-ISM-FN-01 guide questions are compiled and approved elaborately by experienced professionals and experts. The download and tryout of our D-ISM-FN-01 torrent question before the purchase are free and we provide free update and the discounts to the old client. Our customer service personnel are working on the whole day and can solve your doubts and questions at any time. Our online purchase procedures are safe and carry no viruses so you can download, install and use our D-ISM-FN-01 Guide Torrent safely.

2026 Latest D-ISM-FN-01 Test Answers 100% Pass | Efficient D-ISM-FN-01: Dell Information Storage and Management Foundations v2 Exam 100% Pass

Among global market, D-ISM-FN-01 guide question is not taking up such a large share with high reputation for nothing. And we are the leading practice materials in this dynamic market. To facilitate your review process, all questions and answers of our D-ISM-FN-01 test question is closely related with the real exam by our experts who constantly keep the updating of products to ensure the accuracy of questions, so all D-ISM-FN-01 Guide question is 100 percent assured. It is a mutual benefit job, that is why we put every exam candidates' goal above ours, and it is our sincere hope to make you success by the help of D-ISM-FN-01 guide question and elude any kind of loss of you and harvest success effortlessly.

EMC Dell Information Storage and Management Foundations v2 Exam Sample Questions (Q31-Q36):

NEW QUESTION # 31

Question:

What is the main advantage of 5G technology over previous generations of mobile networks?

- A. Increased bandwidth
- B. Increased speed and capacity**

- C. Lower cost
- D. Reduced distance

Answer: B

Explanation:

5G represents the fifth generation of mobile networks and offers several significant advantages over 4G, 3G, and earlier generations:

- * Increased speed: 5G delivers data speeds up to 100 times faster than 4G LTE.
- * Enhanced capacity: Supports more devices per square kilometer, crucial for IoT and smart cities.
- * Low latency: Reduces delay in data transmission, enabling real-time applications like remote surgeries or autonomous vehicles.
- * Increased bandwidth (Option B) is part of the overall increased capacity.
- * Reduced distance (Option C) is incorrect; 5G uses shorter wavelengths, meaning shorter range.
- * Lower cost (Option D) is not a key advantage of 5G technology itself.

NEW QUESTION # 32

Question:

A company is concerned about the risk of data loss due to accidental deletion and hardware failures. What is the primary reason for implementing a data backup solution?

- A. To reduce the usage of archive storage
- B. To maintain business continuity
- C. To improve application performance
- D. To reduce storage costs

Answer: B

Explanation:

The primary purpose of a data backup solution is to maintain business continuity by ensuring data can be restored in case of accidental deletion, hardware failure, or data corruption.

- * Not to reduce storage costs: Archiving and tiering handle that.
- * Not to improve application performance: Backup processes typically don't enhance live performance.
- * Not to reduce archive usage: Backup and archive have different use cases.

NEW QUESTION # 33

Question:

In traditional provisioning, which two factors determine the availability, capacity, and performance of the RAID set?

- A. Capacity of drives
- B. The number of drives in the RAID set
- C. Make of drives
- D. The RAID level

Answer: B,D

Explanation:

In traditional storage provisioning, the RAID configuration significantly impacts the storage system's characteristics:

- * RAID Level: Determines data redundancy and fault tolerance. For example, RAID 1 mirrors data, providing high availability, while RAID 5 uses parity, balancing performance and redundancy.
- * Number of Drives: Affects both capacity and performance. More drives can increase total storage capacity and improve performance through parallel data access.
- * Make of Drives: While drive quality matters, it's less influential than RAID configuration in determining overall system characteristics.
- * Capacity of Drives: Impacts total storage size but doesn't directly influence performance or availability as significantly as RAID level and drive count.

NEW QUESTION # 34

Question:

A customer uses FCIP to connect local and remote FC SANs. The remote SAN is replicated to and used to store daily backup data. Latency over the IP WAN increases to unacceptable levels during peak replication periods. No other data transfer services using the WAN experience the same latency problem.

What is the likely cause of the data replication performance issue?

- A. IP packet segmentation
- B. FCIP gateway FC ports set to EX_Port mode
- C. Ethernet frame segmentation
- D. FCIP gateway FC ports set to TE_Port mode

Answer: A

Explanation:

IP packet segmentation can cause replication performance issues over the WAN.

Since FCIP tunnels FC frames over IP networks, if the IP packet size exceeds the MTU, packets are fragmented and reassembled, increasing latency.

- * TE_Port mode is used for trunking, not related to packet fragmentation.
- * EX_Port mode is used for inter-switch connectivity (FCR).
- * Ethernet frame segmentation is not relevant in FCIP tunneling.

NEW QUESTION # 35

Question:

Which layer of the OSI reference model provides logical end-to-end connections, sequencing, and integrity?

- A. Transport
- B. Data Link
- C. Session
- D. Presentation

Answer: A

Explanation:

The Transport layer (Layer 4) of the OSI model ensures reliable data transfer between systems by providing:

End-to-end connections- manages communication sessions

Sequencing- orders data packets

Integrity- error detection and correction

* Session (Layer 5): Manages sessions and controls dialogues between systems.

* Data Link (Layer 2): Deals with local network frame delivery.

* Presentation (Layer 6): Translates data formats (like encryption, compression).
