Cloudera CDP Data Engineer - Certification Exam Sample Questions (Q164-Q169):

NEW QUESTION # 164
Due to regulatory requirements, you need to permanently delete specific sensitive records from an Iceberg table. Which of the following techniques would be most appropriate?

- A. Modify the data files directly using low-level tools to overwrite the sensitive data.
- B. Use Iceberg's EXPIRE SNAPSHOTS procedure to remove snapshots containing the sensitive data.
- C. Implement a custom process, leveraging Iceberg's row-level updates to delete the sensitive records and then using file-level operations to physically remove the data.
- D. Issue a standard Iceberg DELETE query, as deleted data will automatically be expunged from the table.

Answer: C

Explanation:
Iceberg doesn't have a built-in "permanent delete" feature. You'll need a carefully designed process combining row-level updates with the ability to rewrite data files to comply with regulations.

NEW QUESTION # 165

In Apache Spark, which storage level is recommended for caching data that is accessed frequently but is too large to fit in memory?

- A. MEMORY AND DISK
- B. OFF HEAP
- C. DISK ONLY
- D. MEMORY ONLY

Answer: A

Explanation:
The MEMORY_AND_DISK storage level is recommended for caching data that is frequently accessed but too large to fit entirely in memory. This level stores the data in memory as much as possible and spills the remainder to disk, providing a good balance between performance and resource utilization.

NEW QUESTION # 166

What is a potential downside of overly granular partitioning in Hive tables?

- A. Reduced query performance due to metadata overhead
- B. Automatic data deduplication
- C. Simplified data management
- D. Increased data security

Answer: A

Explanation:
Overly granular partitioning in Hive tables can lead to a large number of partitions, which increases the metadata that Hive needs to manage. This can negatively impact query performance because Hive must load and process this extensive metadata before executing queries, potentially leading to slower response times.

NEW QUESTION # 167

How can "Explain Plan" help in optimizing query performance regarding data partitioning?

- A. By indicating whether the query is able to take advantage of partition pruning
- B. By revealing the encryption method used for partitioned data
- C. By showing the number of partitions created on the fly
- D. By displaying the total size of all partitions

Answer: A

Explanation:
An Explain Plan can demonstrate whether a query can benefit from partition pruning, which is a technique to skip over irrelevant partitions based on query conditions, thereby improving query performance by reducing the amount of data scanned.

NEW QUESTION # 168

Your project involves integrating Spark with a NoSQL database, MongoDB. You need to write a DataFrame 'df into a MongoDB collection named 'orders'. Which PySpark code snippet correctly achieves this?

- A. □
- B. □
- C. □
- D. □

Answer: B

Explanation:
Option B is correct as it uses the official MongoDB Spark connector C com.mongodb.spark.sql') and specifies the URI correctly,

pointing to the MongoDB collection.
