For your smooth Identity-and-Access-Management-Architect test preparation, PassTestking provides updated Identity-and-Access-Management-Architect practice material with a success guarantee.

Salesforce Certified Identity and Access Management Architect Sample Questions (Q11-Q16):

NEW QUESTION # 11

Northern Trail Outfitters (NTO) recently purchased Salesforce Identity Connect to streamline user provisioning across Microsoft Active Directory (AD) and Salesforce Sales Cloud.

NTO has asked an identity architect to identify which Salesforce security configurations can map to AD permissions.

Which three Salesforce permissions are available to map to AD permissions?

Choose 3 answers

- A. Roles
- B. Sharing Rules
- C. Field-Level Security
- D. Public Groups
- E. Profiles and Permission Sets

Answer: A,D,E

Explanation:

Explanation

Salesforce Identity Connect can map AD groups to Salesforce public groups, roles, profiles, and permission sets. These permissions control the access and visibility of data and features in Salesforce. References:

Salesforce Identity Connect Implementation Guide

NEW QUESTION # 12

Universal containers (UC) has implemented SAML -based single Sign-on for their Salesforce application. UC is using PingFederate as the Identity provider. To access Salesforce, Users usually navigate to a bookmarked link to my domain URL. What type of single Sign-on is this?

- A. Sp-Initiated
- B. Web server flow.
- C. IDP-initiated with deep linking
- D. IDP-initiated

Answer: A

Explanation:

Explanation

The type of single sign-on that UC is using is SP-initiated, which means that the service provider (Salesforce) initiates the SSO process by sending a SAML request to the identity provider (PingFederate) when the user navigates to the My Domain URL. Therefore, option A is the correct answer. References: SAML SSO with Salesforce as the Service Provider

NEW QUESTION # 13

Northern Trail Outfitters (NTO) has a number of employees who do NOT need access Salesforce objects. These employees should sign in to a custom Benefits web app using their Salesforce credentials.

Which license should the identity architect recommend to fulfill this requirement?

- A. Identity Verification Credits Add-on License

- B. Identity Connect License
- C. External Identity License
- **D. Identity Only License**

Answer: D

Explanation:

To allow employees to sign in to a custom Benefits web app using their Salesforce credentials, the identity architect should recommend the Identity Only License. The Identity Only License is a license type that enables users to access external applications that are integrated with Salesforce using single sign-on (SSO) or delegated authentication, but not access Salesforce objects or data. The other license types are not relevant for this scenario. References: Identity Only License, User Licenses

NEW QUESTION # 14

Universal Containers (UC) has implemented SAML-based Single Sign-On to provide seamless access to its Salesforce Orgs, financial system, and CPQ system. Below is the SSO implementation landscape.

What role combination is represented by the systems in this scenario"

- **A. Salesforce Org1 and Salesforce Org2 are the only Service Providers.**
- B. Salesforce Org1 and PingFederate are acting as Identity Providers.
- C. Salesforce Org1 and Salesforce Org2 are acting as Identity Providers.
- D. Financial System and CPQ System are the only Service Providers.

Answer: A

Explanation:

In a SAML-based SSO scenario, the identity provider (IdP) is the system that performs authentication and passes the user's identity and authorization level to the service provider (SP), which trusts the IdP and authorizes the user to access the requested resource¹.

In this case, PingFederate is the IdP that authenticates users for UC and sends SAML assertions to the SPs. The SPs are the systems that rely on PingFederate for authentication and provide access to their services based on the SAML assertions. The SPs in this scenario are Salesforce Org1, Salesforce Org2, Financial System, and CPQ System². Therefore, the correct answer is B.

SAML-based single sign-on: Configuration and Limitations

NEW QUESTION # 15

An identity architect's client has a homegrown identity provider (IdP). Salesforce is used as the service provider (SP). The head of IT is worried that during a SP initiated single sign-on (SSO), the Security Assertion Markup Language (SAML) request content will be altered.

What should the identity architect recommend to make sure that there is additional trust between the SP and the IdP?

- A. Ensure that there is an HTTPS connection between IDP and SP.
- B. Ensure that the Issuer and Assertion Consumer service (ACS) URL is properly configured between SP and IDP.
- C. Ensure that on the SSO settings page, the "Request Signing Certificate" field has a self-signed certificate.
- **D. Encrypt the SAML Request using certification authority (CA) signed certificate and decrypt on IdP.**

Answer: D

Explanation:

Explanation

Encrypting the SAML Request using a CA signed certificate and decrypting it on the IdP ensures that the request content is not altered or tampered with during transit. This also adds an extra layer of security and trust between the SP and the IdP. References: SAML Single Sign-On Overview, SAML Assertion Encryption

NEW QUESTION # 16

.....
