## SAP - C\_CPI\_2506 –Valid Online Version

As our loyal customers wrote to us that with the help of our C\_CPI\_2506 exam questions, they have successfully passed the exam and achieved the certification. They are now living the life they desired before. While you are now hesitant for purchasing our C\_CPI\_2506 Real Exam, some people have already begun to learn and walk in front of you! So what you should do is to make the decision to buy our C\_CPI\_2506 practice engine right now. The time and tide wait for no man!

### SAP Certified Associate - Integration Developer Sample Questions (Q59-Q64):

#### NEW QUESTION # 59

Which messaging patterns does SAP Event Mesh support for asynchronous communication?

- A. Publish/subscribe and point-to-point messaging
- B. Point-to-point and multicast messaging
- C. Publish/subscribe and request/reply messaging
- D. Request/reply messaging and multicast messaging

**Answer: A**

Explanation:

SAP Event Mesh supports two key asynchronous messaging patterns:

Publish/Subscribe # Producers publish an event once, multiple subscribers consume independently.

Point-to-Point (Queue-based) # Messages sent from one producer to a single consumer via a queue.

Other options are incorrect:

Request/Reply # Synchronous pattern, not the focus of Event Mesh.

Multicast messaging # Not explicitly supported; handled through Pub-Sub.

Thus, Event Mesh supports Publish/Subscribe and Point-to-Point messaging patterns.

#### NEW QUESTION # 60

What are some advantages of the cloud integration capability within SAP Integration Suite?Note: There are 2 correct answers to this question.

- A. Integration processes can be developed offline.
- B. Predefined scenarios can be used out-of-the-box.
- C. Customer-to-Customer (C2C) integrations can be developed.
- D. A local installation is not required.

**Answer: B,D**

Explanation:

Advantages of Cloud Integration capability in SAP Integration Suite:

Predefined scenarios # SAP delivers integration content packages (iFlows) that can be used directly.

No local installation # It runs as a cloud service, no on-premise setup required.

Other options:

Offline development is not supported (development happens in Web UI).

Customer-to-Customer (C2C) integrations are not a standard positioning; it's mainly B2B, B2G, and SAP-to-3rd-party scenarios.

So, correct advantages are out-of-the-box scenarios and no local installation required.

### NEW QUESTION # 61

What are some advantages of creating an OData interface through an API provider? Note: There are 2 correct answers to this question.

- A. Automatic creation of a WSDL specification
- **B. Automatic creation of a Swagger UI**
- C. Automatic creation of a RAML specification
- **D. Automatic creation of an openAPI specification**

**Answer: B,D**

Explanation:

When an OData service is created through an API Provider in SAP API Management:  
The system can automatically generate an OpenAPI specification from the OData service.  
A Swagger UI is automatically created to enable interactive testing and documentation.

Other options:

WSDL specification # Used for SOAP-based services, not OData.

RAML specification # Supported, but not auto-generated by SAP API Management for OData services.

Hence, the correct advantages are:

Swagger UI generation

### NEW QUESTION # 62

What are API Management components? Note: There are 2 correct answers to this question.

- **A. Product**
- **B. API Designer**
- C. API Entity
- D. Authorization server

**Answer: A,B**

Explanation:

Key API Management components in SAP Integration Suite:

API Designer # Used to design APIs, import specifications (OpenAPI, RAML), and define metadata.

Product # Groups one or more APIs into a package that can be published to API Business Hub Enterprise.

Other options:

Authorization Server # Part of security infrastructure, not a direct API Management component.

API Entity # Not a defined component; the actual entities are API Proxies, Providers, and Products.

Thus, correct components are API Designer and Product.

### NEW QUESTION # 63

You want to set up an SAP backend system through the Cloud Connector with an API provider. Which connection type do you use?

- A. Internet
- **B. On-premise**
- C. Cloud Integration
- D. Open Connectors

**Answer: B**

Explanation:

To connect an SAP backend system through the Cloud Connector with an API provider, you must use the on-premise connection type. The Cloud Connector acts as a link between SAP Integration Suite and on-premise systems, enabling secure and controlled access to the backend resources. The on-premise connection type allows you to specify the internal host and port of the backend system, as well as the virtual host and port that will be exposed to SAP Integration Suite. You can also define access control rules and protocols for the on-premise connection. Reference: Part 2: Connect to on-premise APIs from SAP Cloud Platform API Management Cloud Foundry Environment | SAP Blogs, How to configure SAP Cloud Connector & Create API using SCP API

## NEW QUESTION # 64

.....

There is no doubt that advanced technologies are playing an important role in boosting the growth of SAP companies. This is the reason why the employees have now started upgrading their skillset with the SAP Certified Associate - Integration Developer (C\_CPI\_2506) certification exam because they want to work with those latest applications and save their jobs. They attempt the C\_CPI\_2506 exam to validate their skills and try to get their dream job.
