# Three Easy and User-Friendly DumpsMaterials Nutanix NCP-US-6.5 Exam Question Formats

BONUS!!! Download part of DumpsMaterials NCP-US-6.5 dumps for free: https://drive.google.com/open?id=1xa6UXuoY2amkcG-Mt8M-r2bf5J1Cjv89

Now you can think of obtaining any Nutanix certification to enhance your professional career. DumpsMaterials's NCP-US-6.5 study guides are your best ally to get a definite success in NCP-US-6.5 exam. The guides contain excellent information, exam-oriented questions and answers format on all topics of the certification syllabus. If you just make sure learning of the content in the guide, there is no reason of losing the NCP-US-6.5 Exam.

Nutanix NCP-US-6.5 Exam Syllabus Topics:

Topic	Details
Topic 1	• Identify the steps to deploy Nutanix Files • Given a scenario, determine product and sizing parameters
Topic 2	• Troubleshoot issues related to Nutanix Files • Explain Data Management processes for Files and Objects
Topic 3	• Configure Nutanix Files with advanced features • Determine the appropriate method to ensure data availability • recoverability
Topic 4	• Given a scenario, configure shares, buckets, and • or Volume Groups • Troubleshoot a failed upgrade for Files • Objects
Topic 5	• Configure Nutanix Objects • Describe how to monitor performance and usage

| Topic 6	• Utilize File Analytics for data security • Troubleshoot Nutanix Unified Storage • Configure Nutanix Volumes

DumpsMaterials Nutanix NCP-US-6.5 PDF Questions

Before the clients decide to buy our NCP-US-6.5 test guide they can firstly be familiar with our products. The clients can understand the detailed information about our products by visiting the pages of our products on our company's website. Firstly you could know the price and the version of our NCP-US-6.5 study question, the quantity of the questions and the answers. Secondly you could look at the free demos of our NCP-US-6.5 learning prep to see if the questions and the answers are valuable. And our pass rate of NCP-US-6.5 exam questions is more than 98%.

Nutanix Certified Professional - Unified Storage (NCP-US) v6.5 Sample Questions (Q76-Q81):

NEW QUESTION # 76
An administrator has received an alert AI60068 - ADSDuplicationIPDetected details of alert as follows:

Which error log should the administrator review to determine the related Duplicate IP address involved?

- A. Solver.log
- B. Minerva.nvm.log
- C. Minerva_cvm.log
- D. Tcpkill.log

Answer: C

Explanation:
The Minerva_cvm.log file contains information about the Minerva service, which is responsible for managing the FSVMs and their communication with Prism Central. The Minerva_cvm.log file can be used to troubleshoot issues related to Nutanix Files, such as duplicate IP address detection. The log file can be found in /home/nutanix/data/logs/minerva on any CVM in the cluster. Reference: Nutanix Support Portal - Troubleshooting Nutanix Files

NEW QUESTION # 77
An administrator needs to scale out an existing Files instance. Based on the Company's requirements, File instance has four FSVMs configured and needs to expand to six.
How many additional Client IP addresses and Storage IP addresses does the administrator require to complete this task?

- A. 2 Client IPs and 3 Storage IPs
- B. 2 Client IPs and 2 Storage IPs
- C. 3 Client IPs and 2 Storage IPs
- D. 3 Client IPs and 3 Storage IPs

Answer: B

Explanation:
To scale out an existing Files instance, the administrator needs to add one Client IP and one Storage IP for each additional FSVM. Since the Files instance needs to expand from four FSVMs to six FSVMs, the administrator needs to add two Client IPs and two Storage IPs in total. The Client IPs are used for communication between the FSVMs and the clients, while the Storage IPs are used

for communication between the FSVMs and the CVMs. Reference: Nutanix Files Administration Guide, page 28; Nutanix Files Solution Guide, page 7

NEW QUESTION # 78
An administrator has created a distributed share on the File cluster. The administrator connects to the share using Windows Explorer and starts creating folders in the share. The administrator observes that none of the created folder can be renamed as the company naming convention requires.
How should the administrator resolve this issue?

- A. Use the Files MMC SnapIn and rename the folders.
- B. Modify the Files shares to use the NFS protocol.
- C. Use the Microsoft Shared Folder MMC SnapIn.
- D. Modify the read/write permissions on the created folders.

Answer: A

Explanation:
The administrator should resolve this issue by using the Files MMC Snap-in and renaming the folders. The Files MMC Snap-in is a tool that allows administrators to manage Files shares and exports from a Windows machine. The administrator can use the Files MMC Snap-in to connect to a distributed share or export and rename the top-level directories that are hosted by different FSVMs. Renaming the directories from Windows Explorer will not work because Windows Explorer does not recognize the distributed nature of the share or export and will try to rename all directories on the same FSVM, which will fail. Reference: Nutanix Files Administration Guide, page 35; Nutanix Files MMC Snap-in User Guide

NEW QUESTION # 79
An administrator has been tasked with creating a distributed share on a single-node cluster, but has been unable to successfully complete the task.
Why is this task failing?

- A. Number of distributed shares limit reached.
- B. Distributed shares require multiple nodes.
- C. AOS version should be greater than 6.0.
- D. File server version should be greater than 3.8.0

Answer: B

Explanation:
A distributed share is a type of SMB share or NFS export that distributes the hosting of top-level directories across multiple FSVMs, which improves load balancing and performance. A distributed share cannot be created on a single-node cluster, because there is only one FSVM available. A distributed share requires at least two nodes in the cluster to distribute the directories. Therefore, the task of creating a distributed share on a single-node cluster will fail. Reference: Nutanix Files Administration Guide, page 33; Nutanix Files Solution Guide, page 8

NEW QUESTION # 80
Which two prerequisites are needed when deploying Objects to a Nutanix cluster? (Choose two.)

- A. DNS is configured on the PE.
- B. Microsegmentation is enabled.
- C. AHV IPAM is disabled on the VLAN used for Objects.
- D. Data Services IP is configured on the PI

Answer: D

Explanation:
Nutanix Objects requires a Data Services IP to be configured on the Prism Infrastructure (PI) cluster, which is used to expose the S3 API endpoint for accessing buckets and objects. Nutanix Objects also requires AHV IP Address Management (IPAM) to be disabled on the VLAN used for Objects, as Objects uses its own DHCP service to assign IP addresses to the Objects VMs1. References: Nutanix Objects Administration Guide1

NEW QUESTION # 81

......

Having a Nutanix NCP-US-6.5 certification can enhance your employment prospects,and then you can have a lot of good jobs. DumpsMaterials is a website very suitable to candidates who participate in the Nutanix certification NCP-US-6.5 exam. DumpsMaterials can not only provide all the information related to the Nutanix Certification NCP-US-6.5 Exam for the candidates, but also provide a good learning opportunity for them. DumpsMaterials be able to help you pass Nutanix certification NCP-US-6.5 exam successfully.
