D-UN-OE-23 Real Torrent, Practice D-UN-OE-23 Test Online

There are a lot of excellent experts and professors in our company. The high quality of the D-UN-OE-23 reference guide from our company resulted from their constant practice, hard work and their strong team spirit. After a long period of research and development, our D-UN-OE-23 test questions have been the leader study materials in the field. We have taken our customers' suggestions of the D-UN-OE-23 Exam Prep seriously, and according to these useful suggestions, we have tried our best to perfect the D-UN-OE-23 reference guide from our company just in order to meet the need of these customers well. So stop hesitation and

buy our study materials.

EMC Dell Unity Operate 2023 Exam Sample Questions (Q19-Q24):

NEW QUESTION # 19

What is a consideration when specifying a Dial Home suppression time for a Dell Unity XT storage array?

- A. Can be enabled at any time
- B. Should be set between 1 and 32 hours
- C. The time zone where the array is located
- D. Can be lengthened or shortened

Answer: B

NEW QUESTION # 20

When managing VMware ESXi hosts to access VMware datastore storage resources, which of the following is true?

- A. Multipathing is supported for high availability
- B. iSCSI and FCoE are not supported for ESXi hosts
- C. ESXi hosts require a Fibre Channel connection only
- D. VMFS and NFS datastores can be provisioned

Answer: A,D

NEW QUESTION # 21

What strategies should be employed for efficient NAS client access management to SMB and NFS file storage?

- A. Consolidating SMB and NFS services on a single NAS server for simplicity
- B. Configuring network segmentation for SMB and NFS traffic
- C. Implementing user quotas and snapshots for data management
- D. Separate NAS servers for SMB and NFS for performance optimization

Answer: A,C

NEW QUESTION # 22

What is the correct sequence of steps to provision storage for NFS NAS clients?

- A. 1. Mount the shared file system to the client.
2. Provide client access to the storage resources via NFS storage protocol.
3. Group hard drives into storage pools.
4. Create file systems and file system shares
- B. 1. Create file systems and file system shares based on the supported
2. Group hard drives into storage pools.
3. Mount the shared file system to the client.
4. Provide client access to the storage resources via NFS storage protocol.
- C. 1. Group hard drives into storage pools.
2. Create file systems and file system shares based on the supported protocol.
3. Provide client access to the storage resources via NFS storage protocol.
4. Mount the shared file system to the client.
- D. 1. Mount the shared file system to the client.
2. Create file systems and file system shares based on the supported protocol.
3. Provide client access to the storage resources via NFS storage protocol.
4. Group hard drives into storage pools.

Answer: C

What considerations should be taken into account when mixing drive sizes in dynamic pools?

- Answer: B,C**
