Latest Tableau SCA-C01 Study Materials - Reliable SCA-C01 Exam Price

Our Tableau SCA-C01 can help you clear exams at first shot. We promise that we provide you with best quality Tableau SCA-C01 original questions and competitive prices. We provide one year studying assist service and one year free updates downloading of Tableau Server Certified Associate Exam exam questions.

Tableau Server Certified Associate Exam Sample Questions (Q103-Q108):

NEW QUESTION # 103
What is the minimum number of Tableau Server nodes required to satisfy High Availability (HA) requirements?

- A. 0
- B. 1
- C. 2
- D. 3
- E. 4

Answer: D

NEW QUESTION # 104
True or False:
Schedules that run in parallel run on only one backgrounder process, while a schedule that is run on serial mode run using all available backgrounder processes

- A. TRUE
- B. FALSE

Answer: B

Explanation:
Explanation

NEW QUESTION # 106

What two events must occur for Tableau Server to recompute queries for a workbook cache after a scheduled refresh? (Choose two.)

- A. The workbook was published in the last month
- B. The All Users group has a permission rule allowing access to the workbook
- C. The workbook has been viewed recently
- D. The workbook has upcoming scheduled refresh tasks

Answer: C,D

Explanation:
Tableau Server uses caching to speed up workbook loading by storing query results. After a scheduled extract refresh updates the data, the cache may need recomputing-let's dive into the mechanics:
* Caching Basics:
* VizQL Cache: Stores rendered views and query results for faster access.
* Refresh Trigger: A scheduled refresh updates the underlying extract (.hyper), but the cache isn't automatically invalidated-it's demand-driven.
* Recompute Conditions: Tableau recomputes the cache when the workbook is accessed (viewed) and its data has changed (e.g., via refresh).
* Evaluation:
* Option B (The workbook has upcoming scheduled refresh tasks): Correct.
* Why: An upcoming refresh task indicates the workbook relies on an extract with a schedule. After the refresh runs, the data changes, priming the cache for recomputation on next view. Without a schedule, no refresh occurs, so this is a prerequisite.
* Detail: Schedules are set inSchedules > Tasks-e.g., "Daily at 2 AM."
* Option D (The workbook has been viewed recently): Correct.
* Why: Viewing triggers cache recomputation if the data has changed (e.g., post-refresh).
Tableau uses a "lazy caching" model-cache updates only when a user loads the workbook, ensuring fresh results.
* Detail: "Recently" isn't strictly defined but implies post-refresh access.
* Option A (Published in the last month): Incorrect.
* Why: Publish date is irrelevant-cache recomputation ties to data changes and access, not publication timing.
* Option C (All Users group has permission rule allowing access): Incorrect.
* Why: Permissions enable viewing, but recomputation requires actual access (viewing) and a refresh event, not just potential access.
Why This Matters: Caching balances performance and freshness-understanding triggers prevents stale data surprises.

NEW QUESTION # 107

Which two options can be configured by a server administrator per site? (Choose two.)

- A. Ability to embed credentials
- B. Limitation on storage space
- C. Limitation on number of users
- D. Language and locale

Answer: B,D

Explanation:
Tableau Server supports multi-tenancy via sites, each with customizable settings managed by server or site administrators. Let's analyze what's configurable per site:
* Site Settings: Found in the web UI underSite > Settings > General. Server admins can override site admin settings.
* Option B (Limitation on storage space): Correct.
* Details: Server admins can set astorage quotaper site (e.g., 100 GB) to cap disk usage for extracts and workbooks.
* How: In TSM or site settings (if enabled)-e.g., tsm configuration set -k site.storage.quota -v
100000.
* Impact: Prevents one site from monopolizing resources in multi-site deployments.
* Option D (Language and locale): Correct.
* Details: Each site can set itslanguage(e.g., English, French) andlocale(e.g., date/number formats).
* How: Site settings UI-e.g., "Language: French, Locale: France."
* Impact: Tailors the user experience per site's audience.
* Option A (Ability to embed credentials): Incorrect.
* Details: Embedding credentials (e.g., in data sources) is a server-wide setting (tsm data-access), not per-site. Site admins can't override it.
* Option C (Limitation on number of users): Incorrect.
* Details: User limits are tied to licenses (server-wide), not configurable per site. Site admins manage user assignments, not quotas.
Why This Matters: Site-specific settings enable tailored governance and resource allocation in multi-tenant environments.
