One more thing to give you an idea about the top features of Nutanix Certified Professional - Multicloud Infrastructure (NCP-MCI v6.10) (NCP-MCI-6.10) exam questions before purchasing, the Test4Cram are offering free Test4Cram NCP-MCI-6.10 Exam Questions demo download facility. This facility is being offered in all three Test4Cram NCP-MCI-6.10 exam practice question formats.

By keeping customer satisfaction in mind, Test4Cram offers you a free demo of the Nutanix Certified Professional - Multicloud Infrastructure (NCP-MCI v6.10) (NCP-MCI-6.10) exam questions. As a result, it helps you to evaluate the Nutanix Certified Professional - Multicloud Infrastructure (NCP-MCI v6.10) (NCP-MCI-6.10) exam dumps before making a purchase. Test4Cram is steadfast in its commitment to helping you pass the Nutanix in NCP-MCI-6.10 Exam. A full refund guarantee (terms and conditions apply) offered by Test4Cram will save you from fear of money loss.

Free PDF NCP-MCI-6.10 - Nutanix Certified Professional - Multicloud Infrastructure (NCP-MCI v6.10) –Professional Related Content

Success does not come only from the future, but it continues to accumulate from the moment you decide to do it. At the moment you choose NCP-MCI-6.10 practice quiz, you have already taken the first step to success. The next thing you have to do is stick with it. NCP-MCI-6.10 Training Materials will definitely live up to your expectations. Not only our NCP-MCI-6.10 study materials contain the latest exam questions and answers, but also the pass rate is high as 98% to 100%.

Nutanix Certified Professional - Multicloud Infrastructure (NCP-MCI v6.10)

Sample Questions (Q79-Q84):

NEW QUESTION # 79

A user created a report in the Intelligent Operations Analysis Dashboard but forgot to download it. However, after logging back into Prism Central, the administrator finds that the report is no longer available. What is the most likely cause?

- A. The user-generated report was archived.
- B. The report is stored in the cluster's Prism Element.
- C. A user with Cluster Viewer role deleted the report.
- **D. Reports are automatically deleted after 24 hours.**

Answer: D

Explanation:

In Nutanix Prism Central, user-generated reports in Intelligent Operations are stored for a limited time and then deleted automatically.

- * Option C (Reports are automatically deleted after 24 hours) is correct:
- * Reports do not persist indefinitely unless they are scheduled reports.
- * One-time reports expire after 24 hours.
- * Option A (Cluster Viewer deleted the report) is incorrect:
- * Cluster Viewer does not have permissions to delete reports.
- * Option B (Report was archived) is incorrect:
- * Nutanix does not automatically archive reports.
- * Option D (Report stored in Prism Element) is incorrect:
- * Reports are generated and stored only in Prism Central, not Prism Element.

References:

- * Nutanix KB #Why Reports in Prism Central Are Not Persisting

NEW QUESTION # 80

Which Nutanix feature allows users to clone multiple VMs from a single template efficiently?

- A. Image Service
- **B. Fast Clone**
- C. One-Click Upgrade
- D. Prism Central

Answer: B

NEW QUESTION # 81

An administrator wants to ensure that DR snapshots are protected from inadvertent or malicious deletion without notification. What would be the best way to accomplish this?

- A. Assign DR Admin Role to users.
- B. Create and Apply an Alert Policy.
- C. Create a Playbook to alert on event
- **D. Create and Apply an Approval Policy.**

Answer: D

Explanation:

The Nutanix ECA course addresses data protection mechanisms, including how to safeguard disaster recovery (DR) snapshots from inadvertent or malicious deletion. Ensuring that DR snapshots are protected while providing notification requires a policy-based approach to control and monitor deletion actions. The ECA course emphasizes the use of Approval Policies in Prism Central to enforce oversight on critical operations like snapshot deletion.

Extract from Nutanix Enterprise Cloud Administration (ECA) Course Documents:

* Module: Data Protection, Section: Approval Policies "Approval Policies in Prism Central allow administrators to enforce review and approval for operations such as snapshot deletion. By creating an Approval Policy for DR snapshots, administrators can ensure

that deletion requests are reviewed by designated approvers, preventing unauthorized or accidental deletions and providing notifications to relevant stakeholders."

* Module: Prism Central Management, Section: Policy Engine "To protect critical resources like DR snapshots, an Approval Policy can be applied to require approval for deletion actions. This ensures that no snapshot is deleted without explicit authorization, and notifications are sent to approvers to maintain oversight." Explanation of Options:

* A. Create and Apply an Approval Policy This is the correct answer. An Approval Policy in Prism Central is the best way to protect DR snapshots from inadvertent or malicious deletion. The policy requires designated approvers to review and authorize snapshot deletion requests, ensuring oversight and preventing unauthorized actions. Notifications are sent to approvers, meeting the requirement for awareness of deletion attempts. The ECA course highlights: "Approval Policies are ideal for protecting critical data assets, such as DR snapshots, by enforcing a mandatory review process before deletion."

* B. Create and Apply an Alert Policy This is incorrect. Alert Policies in Nutanix are used to notify administrators of system events or thresholds (e.g., high CPU usage or disk failures) but do not prevent actions like snapshot deletion. While an Alert Policy could notify administrators after a deletion occurs, it does not provide proactive protection or require approval, failing to meet the question's requirements.

The ECA course states: "Alert Policies are reactive and designed to notify administrators of events, not to control or prevent actions like snapshot deletion."

* C. Assign DR Admin Role to users This is incorrect. Assigning a DR Admin Role grants users permissions to manage DR operations, including snapshot deletion, but does not add protection or notification mechanisms. In fact, it could increase the risk of deletion by granting more users access.

The ECA course notes: "The DR Admin Role provides administrative privileges for data protection tasks but does not enforce approval workflows or protect against unauthorized deletions."

* D. Create a Playbook to alert on event This is incorrect. Playbooks in Nutanix Flow or Prism Central are used to automate responses to events (e.g., scaling resources or sending alerts), but they are not designed to prevent snapshot deletion or enforce approval workflows. A Playbook could alert administrators after a deletion event, but it lacks the proactive control provided by an Approval Policy.

The ECA course clarifies: "Playbooks are suited for automated remediation or notifications but cannot enforce approval for actions like snapshot deletion." Additional Context from ECA:

* Approval Policy Workflow: In Prism Central, an Approval Policy can be created under Policies > Approval Policies, specifying DR snapshots as the target resource and defining approvers. When a user attempts to delete a protected snapshot, the request is queued for approval, and notifications are sent to approvers via email or Prism Central's interface.

* Use Case: For DR snapshots, which are critical for recovery, Approval Policies ensure that only authorized personnel can approve deletions, reducing the risk of data loss.

Supporting Reference from Web Results:

The Nutanix Bible (<https://www.nutanix.com/go/the-nutanix-bible>) supports the ECA documentation: "Approval Policies in Prism Central provide granular control over operations like snapshot deletion, ensuring critical DR resources are protected through mandatory approval workflows."

NEW QUESTION # 82

In an RF2 cluster, what is the minimum number of nodes required to allow a host removal?

- A. 0
- B. 1
- C. 2
- D. 3

Answer: C

Explanation:

Replication Factor (RF2) means that each piece of data is stored twice across different nodes to ensure availability.

* Option B (3 nodes) is correct:

* In an RF2 cluster, data redundancy requires at least three nodes to ensure data protection when one node is removed.

* If a node is removed from a 3-node cluster, Nutanix automatically redistributes data across the remaining nodes.

* Option A (2 nodes) is incorrect:

* RF2 requires at least three nodes to maintain fault tolerance.

* A 2-node cluster cannot provide full redundancy without a Witness node.

* Option C (4 nodes) and Option D (5 nodes) are incorrect:

* While larger clusters provide more redundancy, the minimum requirement is 3 nodes.

References:

* Nutanix Bible #Replication Factor (RF) and Fault Tolerance

* Nutanix Prism Element Guide #Managing Node Failures and Removals

NEW QUESTION # 83

An administrator is configuring a replication schedule on multiple remote locations deployed using a single- node cluster and would like to achieve the lowest RPO.

- A. Configure schedule for 16-59 minutes.
- B. Configure schedule for 1-15 minutes.
- C. Configure Asynchronous.
- **D. Configure NearSync.**

Answer: D

Explanation:

The Nutanix data protection guide specifies that NearSync replication provides an RPO between 1 and 15 minutes, which is the lowest RPO available for standard asynchronous-based replication models. The documentation further states that NearSync is the supported method for achieving sub-hour RPO on one- and two-node clusters. Asynchronous replication has a minimum RPO of 60 minutes and therefore cannot be used for lowest RPO requirements. While scheduling intervals such as 1-15 minutes appear similar, Nutanix notes that these intervals are only achievable under the NearSync replication mode. Therefore, selecting NearSync is the required configuration to meet the goal of achieving the lowest RPO.

NEW QUESTION # 84

.....

Our company is a multinational company which is famous for the NCP-MCI-6.10 training materials in the international market. After nearly ten years' efforts, now our company have become the topnotch one in the field, therefore, if you want to pass the NCP-MCI-6.10 exam as well as getting the related certification at a great ease, I strongly believe that the NCP-MCI-6.10 Study Materials compiled by our company is your solid choice. To be the best global supplier of electronic NCP-MCI-6.10 study materials for our customers' satisfaction has always been our common pursuit.

NCP-MCI-6.10 Actual Exams: https://www.test4cram.com/NCP-MCI-6.10_real-exam-dumps.html

Furthermore, you can customize your NCP-MCI-6.10 Actual Exams - Nutanix Certified Professional - Multicloud Infrastructure (NCP-MCI v6.10) practice exams according to your needs, Nutanix NCP-MCI-6.10 Related Content I believe that you must think so, Nutanix NCP-MCI-6.10 Related Content Because we hold the tenet that low quality exam materials may bring discredit on the company, Besides NCP-MCI-6.10 study materials are famous for high-quality.

Click the Import button at the upper left of the Organizer NCP-MCI-6.10 Related Content workspace, and choose From Files and Folders from the drop-down menu, Accessing data and log in external systems.

Furthermore, you can customize your Nutanix Certified Professional - Multicloud Infrastructure (NCP-MCI v6.10) practice exams according NCP-MCI-6.10 to your needs, I believe that you must think so, Because we hold the tenet that low quality exam materials may bring discredit on the company.

Achieve your goals with NCP-MCI-6.10 actual dumps & Nutanix NCP-MCI-6.10 exam pdf

Besides NCP-MCI-6.10 study materials are famous for high-quality, Having a Nutanix certification puts you at a better edge than the rest of the job seekers.
