Pass Guaranteed Nutanix - NCP-CI-Azure - Trustable Nutanix Certified Professional - Cloud Integration - Azure (NCP-CI-Azure v6.7) Dump File

ITexamReview is an invisible asset that can give your advantage and get better life higher than your current situation and help you stand out among the average with the best and most accurate NCP-CI-Azure study braindumps. For the great merit of our NCP-CI-Azure Exam Guide is too many to count. Our experts have been dedicated in this area for more than ten years on compiling the content of our NCP-CI-Azure training guide and keeping updating it to the latest.

Nutanix Certified Professional - Cloud Integration - Azure (NCP-CI-Azure v6.7) Sample Questions (Q26-Q31):

NEW QUESTION # 26

Which resource is capable of being connected to a private endpoint as it is not displayed on delegated subnets?

- A. User VMs
- B. Hosts
- C. Prism Central
- D. CVMs

Answer: C

Explanation:

* Private Endpoint: Private Endpoints allow secure access to Azure services over a private network connection. They do not typically appear on delegated subnets, which are used for specific Azure services.

* Prism Central Connectivity: Prism Central can be connected to a private endpoint to ensure secure communication without exposing it to the public internet. This setup ensures secure and private management of the Nutanix environment.

NEW QUESTION # 27

An administrator is tasked with preparing the company's Azure subscription for use with NC2. Which two Azure Resource Providers need to be registered? (Choose two.)

- A. Microsoft.Network
- B. Microsoft.HybridCompute
- C. Microsoft.HybridNetwork
- D. Microsoft.Nutanix

Answer: A,D

Explanation:

Azure Resource Providers: To prepare an Azure subscription for NC2, specific resource providers must be registered to enable necessary services and resources.

Required Providers:

Microsoft.Network: This provider is essential for networking functionalities, including virtual networks, subnets, and other network resources necessary for NC2 deployment.

Microsoft.Nutanix: This provider is specifically required for integrating and managing Nutanix resources within the Azure environment.

Other Providers:

Microsoft.HybridNetwork and Microsoft.HybridCompute: These are not specifically required for NC2 but might be relevant for other hybrid or extended network configurations.

Conclusion: Registering both "Microsoft.Network" and "Microsoft.Nutanix" ensures that all necessary network and Nutanix-specific resources are available for NC2 deployment.

NEW QUESTION # 28

What will be observed in the NC2 cluster when terminating a node from the Azure portal?

- A. NC2 will terminate the node from the cluster.
- B. NC2 will continue re-provisioning the node.
- C. NC2 will shutdown the node.
- D. NC2 will mark the node as degraded.

Answer: D

Explanation:

* Node Termination Observation: When a node is terminated from the Azure portal, the NC2 cluster will detect that the node is no longer operational.

* Marking as Degraded: NC2 will mark the node as degraded, indicating that the node is not functioning as expected. This status allows administrators to take necessary actions to resolve the issue, such as provisioning a new node or addressing the degradation cause.

NEW QUESTION # 29

An administrator must ensure that certain NC2 VMs can access Azure resources. The NC2 VM traffic must not traverse the internet.

How would the administrator achieve this?

- A. By creating an Azure Private Endpoint for VMs in a No-NAT network via vWAN.
- B. By creating an Azure Private Endpoint for VMs in a NAT network via vWAN.
- C. By creating an Azure Private Endpoint for VMs in a Delegated Subnet
- D. By creating an Azure Private Endpoint for VMs in the host-mgmt subnet.

Answer: C

Explanation:

Azure Private Endpoint: A Private Endpoint provides secure connectivity to Azure resources by enabling private access through the Azure backbone network. This ensures that the traffic does not traverse the internet, providing enhanced security and performance.

Delegated Subnet: By creating an Azure Private Endpoint for VMs in a delegated subnet, the administrator ensures that the VMs can access Azure resources directly and securely without using the public internet.

NEW QUESTION # 30

An administrator is seeking help with an ongoing NC2 issue. After reaching out to Nutanix support, the administrator is introduced to the NC2 specialist who can help troubleshoot the problem.

How can the administrator verify that the NC2 specialist has access to the necessary organizations?

- A. Confirm the Support Authorization on the organization is set to Full Access.
- B. Add the specialist as an admin user to the organizations.
- C. Ensure the specialist is assigned the RBAC role with proper permissions.
- D. Provide the specialist with the administrator's login credentials.

Answer: A

Explanation:

To verify that the NC2 specialist has access to the necessary organizations for troubleshooting the issue, the administrator should: Confirm that the Support Authorization on the organization is set to Full Access. This ensures that the NC2 specialist has the required permissions to access the necessary resources and perform the necessary actions to resolve the issue.

Providing login credentials or adding the specialist as an admin user is not recommended due to security and privacy concerns.

Ensuring the specialist is assigned the correct RBAC role is another valid approach but confirming the support authorization directly ensures they have the needed access.
