F5 BIG-IP Administration Control Plane Administration Sample Questions (Q31-Q36):

NEW QUESTION # 31
A BIG-IP Administrator needs to restore a UCS file to an F5 device using the Configuration Utility.
Which section of the Configuration Utility should the BIG-IP Administrator access to perform this task?
(Choose one answer)

- A. Local Traffic > Policies
- B. System > Configuration
- C. System > Archives
- D. Local Traffic > Virtual Servers

Answer: C

Explanation:
In the BIG-IP Configuration Utility, all system backup and restore operations-including UCS (User Configuration Set) file restoration-are performed from the Archives section.
The correct navigation path is:
System > Archives
From this location, the administrator can:
* Upload UCS files
* Restore UCS backups
* Manage system archive files used for backup and recovery
Why the other options are incorrect:
* A. System > Configuration is used for general system settings, not backup restoration.
* C. Local Traffic > Virtual Servers is used for application traffic objects.
* D. Local Traffic > Policies manages traffic policies, not system backups.
Therefore, the correct section to restore a UCS file using the Configuration Utility is System > Archives.

NEW QUESTION # 32

A BIG-IP Administrator needs to restore a UCS file to an F5 device using the Configuration Utility. Which section of the Configuration Utility should the BIG-IP Administrator access to perform this task?

- A. Local Traffic > Policies
- B. System > Configuration
- C. System > Archives
- D. Local Traffic > Virtual Servers

Answer: C

Explanation:
Comprehensive and Detailed Explanation From BIG-IP Administration Control Plane Administration documents: Managing the state of a device often involves restoring configuration backups known as User Configuration Set (UCS) files These archives contain the full system configuration, including licenses and SSL certificates. The Control Plane provides a dedicated management area for these files under System > Archives, where administrators can upload, create, and restore configuration snapshots

NEW QUESTION # 33

A local user account (Users) on the BIG-IP device is assigned the User Manager role. User1 attempts to modify the properties of another account (User2), but the action fails. The BIG-IP Administrator can successfully modify the User2 account. Assuming the principle of least privilege, what is the correct way to allow User1 to modify User2 properties?

- A. Grant User administrator privileges
- B. Move User2 to the same partition as User1
- C. Move User1 to the same partition as User2
- D. Modify the partition access for User1

Answer: D

Explanation:
In F5 TMOS, administrative roles and user permissions are partition-specific. The User Manager role allows an account to manage other user accounts, but this authority is restricted to the administrative partitions to which the User Manager has been granted access.
* Partition Awareness: If User1 (the User Manager) attempts to modify User2 and fails, while the full Administrator succeeds, it indicates that User2 resides in a partition where User1 does not have management rights.
* Principle of Least Privilege: This principle dictates that a user should be given only the minimum level of access necessary to perform their job functions.
* Procedural Solution: Granting "Administrator" privileges (Option B) would violate least privilege by giving User1 full control over all system settings and all partitions. Moving users between partitions (Options A and C) might disrupt the organizational security structure. The correct and most secure administrative action is to modify the partition access for User1 to include the partition where User2 is located. This enables User1 to manage User2's properties while maintaining their restricted role as a User Manager.

NEW QUESTION # 34

A BIG-IP Administrator is setting up a new BIG-IP device. The network administrator reports that the interface has an incompatible media speed. The BIG-IP Administrator needs to change this setting manually.
From which location should the BIG-IP Administrator perform this task?14

- A. On the Front Console15
- B. In the TMOS Shell Command line16
- C. In the Configuration Utility, System > Configuration18
- D. In the Configuration Utility, Network > Interface17

Answer: D

Explanation:
Comprehensive and Detailed Explanation From BIG-IP Administration20 Control Plane Administration documents: Connectivity management involves ensuring that the physical layer matches the networking environment. Interface properties, including media speed, duplex settings, and MTU, are managed at the Control Plane level under the Network menu. To resolve a mismatch with an upstream switch, the administrator must navigate to Network > Interfaces to manually override auto-negotiation settings.

NEW QUESTION # 35

The BIG-IP Administrator generates a qkview using "qkview -s0" and needs to transfer the output file via SCP. Which directory contains the output file?

- A. /var/local
- B. /var/log
- C. /var/tmp
- D. /var/config

Answer: C

Explanation:
A QKView is a comprehensive snapshot of the device's Control Plane state, configuration, and logs used for troubleshooting. By default, the qkview utility stores its generated output file in the /var/tmp/ directory.
Administrators must know this path to retrieve the file for upload to F5 iHealth or Support.
