NEW QUESTION # 15

How can SAP Knowledge Graph provide context to AI agents? Note: There are 2 correct answers to this question.

- A. By validating assumptions and deriving logical conclusions from structured relationships
- B. By using advanced analytics and machine learning capabilities
- C. By disambiguating terms, linking concepts to entities, and grounding user conversations in domain-specific knowledge
- D. By connecting data from multiple SAP applications and third-party systems

Answer: C,D

Explanation:
The SAP Knowledge Graph enhances AI agents by providing context, as detailed in SAP Business AI documentation. It achieves this by connecting data from multiple SAP applications and third-party systems, creating a unified data model that ensures comprehensive insights. Additionally, it supports AI agents by disambiguating terms, linking concepts to entities, and grounding user conversations in domain-specific knowledge, enabling precise and relevant responses. While advanced analytics and machine learning are part of SAP's AI capabilities, they are not specific functions of the Knowledge Graph. Validating assumptions is a broader AI function, not a primary role of the Knowledge Graph. These features make it a critical component for contextual AI.
