

Take Your ISACA CDPSE Practice Exam In Different Formats

P.S. Free & New CDPSE dumps are available on Google Drive shared by TorrentExam: <https://drive.google.com/open?id=1hJHPV0qbEprBZiOARIHwu5tRcmWTb6Fm>

The users of CDPSE exam reference materials cover a wide range of fields, including professionals, students, and students of less advanced culture. This is because the language format of our CDPSE study materials is easy to understand. No matter what information you choose to study, you don't have to worry about being a beginner and not reading data. And our CDPSE Test Questions are prepared by many experts. The content of our CDPSE study guide is very easy for you to understand for all the levels of the candidates.

The CDPSE certification exam is designed to validate the knowledge and skills of individuals in the areas of data privacy solutions engineering, including data privacy regulations, implementation of privacy by design, and privacy program management. CDPSE exam covers various topics such as privacy principles and concepts, privacy regulations and standards, privacy engineering, privacy program management and governance, and privacy incident management. Candidates who pass the CDPSE Certification Exam are recognized as experts in the field of data privacy solutions engineering and are highly sought after by employers looking to secure their data privacy programs.

CDPSE Latest Exam Pattern & CDPSE Top Questions

If you are a new comer for our CDPSE practice engine, you may doubt a lot on the quality, the pass rate, the accuracy and so on. You can go for the free demos of the CDPSE learning braindumps and make sure that the quality of our CDPSE Exam Questions And Answers which can serve you the best. You are not required to pay any amount or getting registered with us for downloading free demos of our CDPSE training guide. They are all free for you to download.

The CDPSE Exam covers four key domains: Data Privacy Governance, Data Privacy Architecture, Data Privacy Operations, and Data Privacy and Security Technical Controls. CDPSE exam consists of 150 multiple-choice questions, and candidates have four hours to complete it. To be eligible for the exam, candidates must have a minimum of five years of experience in data privacy or a related field, with at least three years of experience in consulting, designing, implementing, or managing data privacy solutions.

ISACA Certified Data Privacy Solutions Engineer Sample Questions (Q67-Q72):

NEW QUESTION # 67

Which of the following is the BEST way to address threats to mobile device privacy when using beacons as a tracking technology?

- A. Enable Trojan scanners.
- B. Enable antivirus for mobile devices.
- C. Disable location services.
- **D. Disable Bluetooth services.**

Answer: D

Explanation:

Beacons use Bluetooth low-energy (BLE) wireless technology to transmit information to nearby devices that have Bluetooth enabled. By disabling Bluetooth services on the mobile device, the user can prevent beacons from detecting and tracking their location and sending them unwanted messages or advertisements. This can help protect the user's privacy and avoid potential security risks from malicious beacons. Disabling location services, enabling Trojan scanners, or enabling antivirus for mobile devices are not effective ways to address threats to mobile device privacy when using beacons as a tracking technology, because they do not prevent the communication between beacons and the mobile device.

NEW QUESTION # 68

What is the BEST way for an organization to maintain the effectiveness of its privacy breach incident response plan?

- A. Conduct annual data privacy tabletop exercises.
- B. Hire a third party to perform a review of data privacy processes.
- C. Require security management to validate data privacy security practices.
- D. Involve the privacy office in an organizational review of the incident response plan.

Answer: C

Explanation:

Because many privacy incidents are also security incidents, the development of a privacy incident response plan should be performed in close cooperation with the security manager to avoid duplication of effort and to utilize existing response plan resources and practices.

NEW QUESTION # 69

An organization is developing a wellness smartwatch application and is considering what information should be collected from the application users. Which of the following is the MOST legitimate information to collect for business reasons in this situation?

- A. Education and profession
- B. Sleep schedule and calorie intake
- C. Race, age, and gender
- D. Height, weight, and activities

Answer: D

Explanation:

Height, weight, and activities are the most legitimate information to collect for business reasons in this situation, as they are directly related to the purpose and functionality of a wellness smartwatch application that aims to monitor and improve the health and fitness of its users. Collecting height, weight, and activities would also comply with the data minimization principle that requires limiting the collection, storage and processing of personal data to what is necessary and relevant for the intended purposes. The other options are not legitimate information to collect for business reasons in this situation, as they are not related to the purpose and functionality of a wellness smartwatch application and may violate the privacy rights and preferences of its users. Collecting sleep schedule and calorie intake may be useful for some users who want to track their sleep quality and nutrition intake, but they are not essential for a wellness smartwatch application and may require additional consent or justification from the users. Collecting education and profession may be irrelevant for a wellness smartwatch application and may be used for other purposes, such as marketing or profiling, without the consent or knowledge of the users. Collecting race, age, and gender may be sensitive for some users who do not want to disclose their personal characteristics or identity, and may require additional safeguards or measures to protect their privacy¹, p. 75-76 Reference: 1: CDPSE Review Manual (Digital Version)

NEW QUESTION # 70

Which of the following helps define data retention time in a stream-fed data lake that includes personal data?

- A. Data privacy standards
- B. Information security assessments

- C. Privacy impact assessments (PIAs)
- D. Data lake configuration

Answer: A

Explanation:

Explanation

Data privacy standards are the set of rules, guidelines, and best practices that define the requirements and expectations for the collection, processing, storage, sharing, and disposal of personal data. Data privacy standards help to ensure that personal data is treated in a fair, lawful, transparent, and secure manner, as well as to comply with the applicable privacy laws and regulations. Data privacy standards also help to define the data retention time in a stream-fed data lake that includes personal data, as they specify the criteria and conditions for how long personal data can be kept in the data lake, based on factors such as the purpose, necessity, relevance, and quality of the data. Data retention time is an important aspect of data privacy, as it affects the risk of data breaches, unauthorized access, or misuse of personal data.

NEW QUESTION # 71

Which of the following is MOST important to review before using an application programming interface (API) to help mitigate related privacy risk?

- A. Data taxonomy
- B. Data collection
- C. Data classification
- D. Data flows

Answer: D

Explanation:

Explanation

Data flows are the most important to review before using an application programming interface (API) to help mitigate related privacy risk. Data flows are the paths or routes that data take from their sources to their destinations through various processes, transformations, or exchanges. Data flows can help understand how data are collected, used, shared, stored, or deleted by an API and its related applications. Data flows can also help identify the potential privacy risks or impacts that may arise from data processing activities involving an API and its related applications. Data flows can be represented by diagrams, maps, models, or documents that show the sources, destinations, types, formats, volumes, frequencies, purposes, or legal bases of data.

Data taxonomy, data classification, and data collection are also important for privacy risk mitigation when using an API, but they are not the most important. Data taxonomy is a system of organizing and categorizing data into groups, classes, or hierarchies based on their characteristics, attributes, or relationships. Data taxonomy can help understand the structure, meaning, context, or value of data. Data classification is a process of assigning labels or tags to data based on their sensitivity, confidentiality, criticality, or risk level. Data classification can help determine the appropriate level of protection or handling for data. Data collection is a process of gathering or obtaining data from various sources for a specific purpose or objective. Data collection can help obtain the necessary information or evidence for decision making or problem solving.
