The ISTQB job market has become so competitive and challenging. To stay competitive in the market as an experienced IT professional you have to upgrade your skills and knowledge with the ISTQB Certified Tester - Performance Testing (CT-PT) certification exam. With the CT-PT exam dumps you can easily prove your skills and upgrade your knowledge. To do this you just need to enroll in the ISTQB Certified Tester - Performance Testing (CT-PT) certification exam and put all your efforts to pass this challenging ISTQB CT-PT exam with good scores.

In light of the truth that different people have various learning habits, we launch three CT-PT training questions demos for your guidance: the PDF, Software and the APP online. Just come to our official website and click on the corresponding website link of the CT-PT Exam Materials, then seek the information you need, the test samples are easy to obtain. In addition, you can freely download those CT-PT learning materials for your consideration.

## CT-PT Exam Actual Questions | CT-PT Valid Test Guide

It means that our CT-PT test questions are very useful for all people to achieve their dreams, and the high quality of our CT-PT exam prep is one insurmountable problem. If you decide to choice our products as your study tool, you will be easier to pass your exam and get the CT-PT Certification in the shortest time. So do not hesitate and buy our CT-PT test torrent, an unexpected surprise is awaiting you, we believe you will prefer to our CT-PT test questions than other study materials.

## ISTQB Certified Tester - Performance Testing Sample Questions (Q13-Q18):

### NEW QUESTION # 13

Which of the following is a key challenge when testing applications in a cloud environment?

- A. Test execution speed being too high
- B. Lack of user behavior simulation tools
- C. Limited ability to control test execution timing
- D. Inability to generate significant load

**Answer: C**

Explanation:

One of the biggest challenges of cloud-based performance testing is the lack of control over test execution timing due to shared cloud resources. Cloud environments dynamically allocate computing power, meaning that test execution may vary due to background processes, VM migrations, or auto-scaling events.

Option B (Inability to generate load) is incorrect because cloud platforms can scale up resources to generate high loads.

Option C (Lack of behavior simulation tools) is incorrect because cloud providers offer robust testing tools.

Option D (Test execution speed being too high) is not a valid performance testing challenge.

### NEW QUESTION # 14

Which of the following is considered a common web service protocol?

- A. SOAK
- B. HTTP
- C. RTE
- D. REST

**Answer: D**

Explanation:

REST (Representational State Transfer) is a widely used web service protocol that enables client-server communication over HTTP. It is commonly used in modern APIs and web applications for performance testing.

Option A (SOAK) refers to soak testing, which evaluates performance over an extended period.

Option C (HTTP) is a transport protocol, but REST is the actual web service architecture built on HTTP.

Option D (RTE) is not a web service protocol but may refer to Real-Time Enterprise systems.

### NEW QUESTION # 15

What is typically the result of oversaturation of system resources during performance testing?

- A. The size of the database will gradually decrease.
- B. Error logging will decrease.
- C. Response time will be slow under significant load levels.
- D. Response time will gradually improve over a period of time.

**Answer: C**

Explanation:

When system resources are oversaturated (e.g., CPU, RAM, or network bandwidth), response times will degrade because the system struggles to process requests efficiently. This is a key performance bottleneck indicator.

Option A is incorrect because response times do not improve under heavy load; they typically worsen.

Option C is incorrect because error logging may actually increase rather than decrease under stress.

Option D is incorrect because database size is independent of system saturation unless records are actively purged.

### NEW QUESTION # 16

When following the principal performance testing activities, when are resources allocated?

- A. During test evaluation
- B. During test execution
- C. During test planning

- D. During test completion

**Answer: C**

Explanation:

Resource allocation happens during the test planning phase, where hardware, tools, and personnel are assigned to the project. This ensures that performance tests are adequately supported.

Option B (Test execution) is when resources are actually used, not allocated.

Option C (Test evaluation) happens after execution to analyze results.

Option D (Test completion) focuses on documentation and reporting.

**NEW QUESTION # 17**

You are managing the testing efforts of an existing distributed system that manages inventories of automobile and light truck tires from multiple warehouses across the country. The system is being enhanced to track incoming restocking shipments at the point of entry to the warehouse and outbound sales shipments at the point of shipment from the warehouse, all of which are executed in real-time. System loads traditionally peak on Mondays due to built-up demand from the previous weekend.

You are constructing an operational profile that emulates entities that submit large, bulk orders of greater than or equal to 1600 tires per transaction. You feel the profile you are constructing accurately reflects this type of power purchaser.

Which of the following steps must you take to ensure your operational profile is accurate?

- **A. Review and adjust the profile with key stakeholders prior to using it.**
- B. Aggregate the specific operational profiles into a single generic profile and use that generic profile for load testing.
- C. Based on the power purchaser information, create operational profiles for low and medium purchasers and use equal proportions of those profiles during the testing.
- D. Execute the performance test with the operational profile and adjust the parameters as needed.

**Answer: A**

Explanation:

To ensure an accurate operational profile, it is crucial to validate and adjust it with key stakeholders before executing tests. This step ensures that the workload realistically represents actual user behavior.

Option A (Executing the test first and adjusting later) is incorrect because adjustments should be made before execution to avoid misleading results.

Option C (Aggregating profiles into a single generic profile) removes important distinctions between different user types, reducing test accuracy.

Option D (Creating separate profiles and using equal proportions) does not match the actual power purchaser behavior, which requires a realistic representation of their higher-volume transactions.
