

Integration-Architect Authorized Pdf, Integration-Architect Vce Download

What's more, part of that PassCollection Integration-Architect dumps now are free: https://drive.google.com/open?id=1RdGw7bQhFSJwajHUz0McZ9jFQJleH_VP

One thing has to admit, more and more certifications you own, it may bring you more opportunities to obtain better job, earn more salary. This is the reason that we need to recognize the importance of getting the test Integration-Architect certifications. More qualified certification for our future employment has the effect to be reckoned with, only to have enough qualification certifications to prove their ability, can we win over rivals in the social competition. Therefore, the Integration-Architect Guide Torrent can help users pass the qualifying examinations that they are required to participate in faster and more efficiently.

Salesforce Integration-Architect Certification Exam is designed to test the expertise of the integration architects in integrating various systems with Salesforce. Salesforce Certified Integration Architect certification enables integration architects to prove their skills in designing, building, and maintaining complex integrations between Salesforce and other systems. Salesforce Certified Integration Architect certification exam is a must-have for integration architects who want to advance their career by demonstrating their proficiency in Salesforce integration.

Integration-Architect Vce Download - Valid Integration-Architect Test Cram

If you fail Integration-Architect exam with our Integration-Architect exam dumps, we will full refund the cost that you purchased our Integration-Architect exam dumps. However, our promise of "No help, full refund" doesn't shows our no confidence to our products; oppositely, it expresses our most sincere and responsible attitude to reassure our customers. With our professional Integration-Architect Exam software, you will be at ease about your Integration-Architect exam, and you will be satisfied with our after-sale service after you have purchased our Integration-Architect exam software.

Salesforce Integration-Architect Certification Exam is an essential certification for professionals who specialize in integrating Salesforce with other systems. Salesforce Certified Integration Architect certification validates the skills and knowledge required to develop efficient, scalable, and secure integrations that meet the needs of businesses. To prepare for the exam, candidates should have a deep understanding of Salesforce architecture, design patterns, and best practices, as well as experience working with a range of integration tools. With this certification, professionals can demonstrate their expertise in Salesforce integration and open up new career opportunities.

Salesforce Certified Integration Architect Sample Questions (Q35-Q40):

NEW QUESTION # 35

An integration architect has been tasked with integrating Salesforce with an on-premises system. Due to some established policies, this system must remain on-premises.

What should the integration architect use to build a solution for this requirement?

- **A. Use Salesforce Connect If the database supports Open Data Protocol (OData).**
- B. Use Heroku Connect if the data is hosted in Heroku.
- C. Use Salesforce Connect if the database supports Open Database Connectivity (ODBC).

Answer: A

Explanation:

Explanation

Use Salesforce Connect if the database supports Open Data Protocol (OData). Salesforce Connect allows you to integrate external data sources with Salesforce without copying the data into Salesforce. OData is a standard protocol for accessing data from different sources. Use Salesforce Connect if the database supports Open Database Connectivity (ODBC) is incorrect because ODBC is not supported by Salesforce Connect. Use Heroku Connect if the data is hosted in Heroku is incorrect because Heroku Connect is used to synchronize data between Salesforce and a Heroku Postgres database, not an on-premises system.

NEW QUESTION # 36

A company needs to send data from Salesforce to a homegrown system behind a corporate firewall. The data is pushed one way, doesn't need to be real-time, and averages 2 million records per day. What should an integration architect consider?

- A. Due to high volume of records, number of concurrent requests can hit the limit for the REST API.
- B. Due to high volume of records, the external system will need to use a BULK API Rest endpoint to connect to Salesforce.
- **C. Due to high volume of records, a third-party integration tool is required to stage records off platform.**

Answer: C

Explanation:

With a volume of 2 million records per day, this integration exceeds the practical limits of standard near- real-time patterns like Outbound Messaging or synchronous Apex Callouts. Sending 2 million individual REST requests would likely exhaust the daily API limit and could cause significant performance degradation in Salesforce due to transaction overhead.

An Integration Architect must recommend an Asynchronous Batch Data Synchronization pattern, typically facilitated by a third-party ETL/Middleware tool (e.g., MuleSoft, Informatica, or Boomi). Staging the records off-platform is essential for several reasons:

* Throttling: The homegrown system behind a firewall may not be able to handle a massive, sudden burst of 2 million records. A middleware tool can ingest the data from Salesforce and "drip-feed" it into the target system at an acceptable rate.

* Error Handling and Retries: Middleware provides sophisticated persistence and "Dead Letter Queues" to ensure that if the homegrown system goes offline, no data is lost.

* API Efficiency: The middleware can use the Salesforce Bulk API 2.0 to extract the data in large chunks, which is significantly more efficient than individual REST calls and consumes far fewer API limits.

Option A is a valid concern but is a symptom of the wrong choice of tool (REST). Option B describes an inbound integration to Salesforce, whereas the requirement is outbound. By utilizing a third-party tool to stage and manage the 2 million record flow, the architect ensures that the integration is scalable, respects the corporate firewall constraints (via a secure agent or VPN), and maintains the performance of the Salesforce production environment.

NEW QUESTION # 37

An integration architect has received a request to prevent employees that leave the company from accessing data in Salesforce after they are deactivated in the company's HR system.

What should the integration architect determine before recommending a solution?

- A. Data access prevention requirements, then identify frequency
- B. Inbound integration requirements, then identify frequency
- C. Data access prevention requirements, integration requirements, and system constraints

Answer: A

NEW QUESTION # 38

The goals for implementing Salesforce include a 360-degree view, leveraging CRM for marketing, sales, and service, and reusing enterprise quoting/order management. Which three systems from the current landscape can be retired?

- A. Sales Activity, Order Management, and Case Management
- B. Email Marketing, Sales Activity, and Case Management
- C. Order Management, Case Management, and Email Marketing

Answer: B

Explanation:

When implementing Salesforce to achieve a 360-degree view of the customer, the platform replaces legacy "siloes" applications that perform core CRM functions. Based on the business goals provided, Salesforce will be the master for Marketing, Sales, and Service.

The systems to be retired are those whose functionality is natively subsumed by Salesforce:

* Email Marketing: Replaced by Salesforce Marketing Cloud or native marketing features.

* Sales Activity: Replaced by Sales Cloud, which masters lead management, opportunity tracking, and activity logging.

* Case Management: Replaced by Service Cloud, which provides the tools for customer support agents to resolve inquiries.

Order Management and Quoting are specifically noted as "Enterprise capabilities" that the business wants to reuse. This means these systems will stay in the landscape and be integrated with Salesforce, rather than being retired. Therefore, any option containing "Order Management" (A and C) is incorrect. Retiring the marketing, sales activity, and service systems allows the organization to consolidate its customer data into a single platform, fulfilling the primary goal of the Salesforce transformation.

NEW QUESTION # 39

A customer is migrating from an old legacy system to Salesforce. As part of the modernization effort, they would like to integrate all existing systems that currently work with their legacy application with Salesforce.

Which three constraints and pain-points should an integration architect consider when choosing the integration pattern/mechanism?

Choose 3 answers

- A. Data Volume and Processing volume
- B. Error handling mechanisms
- C. System types - APIs, File systems, Email
- D. Reporting and usability requirements
- E. Multi-language and multi-currency requirement

Answer: A,B,C

Explanation:

The system types, the error handling mechanisms, and the data volume and processing volume are three constraints and pain-points that an integration architect should consider when choosing the integration pattern

/mechanism. The system types determine what kind of interfaces and protocols are available or required for the integration, such as APIs, file systems, email, etc. The error handling mechanisms ensure that the integration can handle any failures or exceptions gracefully and provide appropriate logging and notification.

The data volume and processing volume affect the performance and scalability of the integration, as well as the choice of synchronous or asynchronous methods. Reference: Salesforce Integration Architecture Designer Resource Guide, page 17
