These formats are Salesforce PDII-JPN PDF dumps, web-based practice test software, and desktop practice test software. All these three (PDII-JPN) exam questions contain the real, valid, and updated Salesforce Exams that will provide you with everything that you need to learn, prepare and pass the challenging but career advancement PDII-JPN Certification Exam with good scores.

Salesforce Sample Questions (Q161-Q166):

NEW QUESTION # 161

会社にはカスタム オブジェクト Order__c があり、そのカスタム選択リスト フィールド Status__c の値は「New」、「In Progress」、または「Fulfilled」、および参照フィールド Contact__c は Contact です。「履行済み」注文がないすべての取引先責任者レコードの一意のリストを返す SOQL クエリはどれですか?

- A. ☐
- B. ☐
- C. ☐
- D. ☒

Answer: D

NEW QUESTION # 162

開発者は、保存時にアカウントの所有権をキューに自動的に割り当てる Visualforce ページを持っています。ページは所有権を正しく割り当てているように見えますが、正しい所有権を検証するアサーションは失敗します。この問題の原因は何でしょうか?

- A. テスト クラスはデータベースから更新された値を取得しません。
- B. テスト クラスは seeallData=true アノテーションを使用しません。
- C. テスト クラスは Queueable インターフェイスを実装していません。
- D. テスト クラスは、テスト データの読み込みに Bulk API を使用しません。

Answer: A

NEW QUESTION # 163

以下のマークアップを参照してください。

☐ Lightning Web コンポーネントには、取引先名と2つのカスタム項目が表示されます。荒地に存在する275。カスタム フィールドが正しく宣言され、値が設定されています。ただし、開発者は、コンポーネントの動作が遅いという苦情を受けています。開発者はパフォーマンスを向上させるために何ができるのでしょうか?

- A. コンポーネントに cache="true" を追加します。
- B. コンポーネントに density="compact" を追加します。
- C. レイアウト タイプ ="1" をフィールド =(フィールド) に置き換えます。
- D. Layout-type="Full" を Layout-type="Partial" に置き換えます。

Answer: C

Explanation:

The best way to improve the performance of the Lightning web component is to replace layout-type="Full" with fields={fields}. The layout-type attribute specifies the layout of the fields in the lightning-record-form component. The value can be Full, Compact, or Custom. The Full value displays all the fields that are available to the current user based on the page layout and field-level security. The Compact value displays the fields that are defined in the compact layout for the object. The Custom value displays the fields that are specified in the fields attribute. The fields attribute is an array of field names that defines the fields to be displayed in the lightning-record-form component. By replacing layout-type="Full" with fields={fields}, the developer can improve the performance of the Lightning web component by reducing the number of fields that are queried and rendered by the lightning-record-form component. The developer can also specify only the fields that are relevant for the component, such as the Account name and the two custom fields, and avoid fetching and displaying unnecessary fields that are not used by the component. Reference: [lightning-record-form Component], [layout-type Attribute], [fields Attribute]

NEW QUESTION # 164

動的 SOQL でバインド変数を使用する場合の考慮事項は何ですか? (2つ選んでください。)

- A. 動的 SOQL はバインド変数を使用できません

- B. バインド変数はパブリックまたはグローバルである必要があります
- C. 動的 SOQL はバインド変数のフィールドを参照できません
- D. バインド変数はローカル スコープ内にある必要があります

Answer: C,D

NEW QUESTION # 165

開発者は、連絡先を素早く入力できるように Lightning Web コンポーネントを作成しましたが、エラーメッセージが表示されません。

HTML

```
<template>
<lightning-record-edit-form object-api-name="Contact">
<lightning-input-field field-name="FirstName"></lightning-input-field>
<lightning-input-field field-name="LastName"></lightning-input-field>
<lightning-input-field field-name="Email"></lightning-input-field>
<lightning-button type="submit" name="submit" label="Create Contact">
</lightning-button>
</lightning-record-edit-form>
</template>
```

エラー メッセージを表示するために、開発者はどのコンポーネントをフォームに追加する必要がありますか?12

- A. オーラ:メッセージ
- B. apex:メッセージ
- C. 雷エラー
- D. ライトニングメッセージ

Answer: D

Explanation:

The lightning-record-edit-form is a powerful LWC component that automates record creation and editing. It handles field-level security, metadata retrieval, and data persistence automatically. However, for a complete user experience, it requires specific sub-components to handle feedback. While lightning-input-field handles inline validation (like a missing required field), it does not automatically display "top-level" error messages, such as validation rule failures or system errors returned from the server.

To display these errors, the developer must include the lightning-messages (Option A) component inside the lightning-record-edit-form tags. When a form submission fails, the lightning-messages component automatically catches the error payload returned by the Lightning Data Service and renders it in a user-friendly format at the top of the form (or wherever it is placed).

Option B is not a standard Base Lightning Component name. Options C and D belong to the Visualforce and Aura frameworks, respectively, and cannot be used within a Lightning Web Component template. Including lightning-messages is a required step for any robust implementation of lightning-record-edit-form to ensure users are informed of why a record could not be saved.

NEW QUESTION # 166

.....

Certification has become a prerequisite for employment and career growth in the Salesforce industry for reputable companies. To advance comfortably in your career, passing the PDII-JPN exam is a valuable validation of your expertise. However, many test takers struggle to find updated (PDII-JPN) dumps and fail to prepare effectively in a short period, resulting in a loss of time, money, and motivation.
