

# 2026 SAP-C02: AWS Certified Solutions Architect - Professional (SAP-C02)–High Pass-Rate Latest Exam Questions

The screenshot shows a digital badge for the AWS Certified Solutions Architect - Professional certification. At the top, it states: "This badge was issued to jorjon\_borja on November 15, 2022. Expires on November 15, 2025." There is a "Verify Badge" button. Below the badge, the title "AWS Certified Solutions Architect - Professional" is displayed, followed by "Issued by Amazon Web Services Training and Certification". A description reads: "Earning of this certification have an extensive understanding of designing technical strategies to accomplish specific business goals. They demonstrated the ability to balance best practices and trade-offs based on business context. Badge owners are able to design solutions across multiple platforms and providers." There is a "Learn more" link. Below that are two tabs: "Certification" (selected) and "Advanced". Under the "Skills" section, there are several tags: Amazon Web Services, AWS, AWS Certification, AWS Cloud, Cloud Architecture, Cloud Certification, Cloud Data, Cloud Infrastructure, Cloud Migration, and Cloud Services. At the bottom, the "Earning Criteria" section shows: "Successfully passed the AWS Certified Solutions Architect - Professional exam." The "TUTORIALS DOJO" logo is visible in the bottom left corner of the screenshot.

P.S. Free 2026 Amazon SAP-C02 dumps are available on Google Drive shared by Actual4Cert: <https://drive.google.com/open?id=1pfcmvPGZk0oAsVvbZ-SbW5dBIKvheA6L>

It is universally accepted that the competition in the labor market has become more and more competitive in the past years. In order to gain some competitive advantages, a growing number of people have tried their best to pass the SAP-C02 exam. Because a lot of people hope to get the certification by the related exam, now many leaders of companies prefer to the candidates who have the SAP-C02 certification. In their opinions, the certification is a best reflection of the candidates' work ability, so more and more leaders of companies start to pay more attention to the SAP-C02 certification of these candidates. If you also want to come out ahead, it is necessary for you to prepare for the exam and get the related certification.

We have 24/7 Service Online Support services on our SAP-C02 exam questions , and provide professional staff Remote Assistance. Besides, if you need an invoice of our SAP-C02 practice materials please specify the invoice information and send us an email. Online customer service and mail Service is waiting for you all the time. And you can download the trial of our SAP-C02 training engine for free before your purchase.

## Dumps SAP-C02 Discount - SAP-C02 Dump Collection

Our SAP-C02 exam questions are based on the actual situation to stimulate exam circumstance in order to provide you a high-quality and high-efficiency user experience. In addition, the SAP-C02 exam guide function as a time-counter, and you can set fixed time to fulfill your task, so that promote your efficiency in real test. The key strong-point of our SAP-C02 Test Guide is that we impart more important knowledge with fewer questions and answers, with those easily understandable SAP-C02 study braindumps, you will find more interests in them and experience an easy learning process.

## Amazon AWS Certified Solutions Architect - Professional (SAP-C02) Sample Questions (Q294-Q299):

### NEW QUESTION # 294

A team collects and routes behavioral data for an entire company. The company runs a Multi-AZ VPC environment with public subnets, private subnets, and an internet gateway. Each public subnet also contains a NAT gateway. Most of the company's applications read from and write to Amazon Kinesis Data Streams. Most of the workloads run in private subnets.

A solutions architect must review the infrastructure. The solutions architect needs to reduce costs and maintain the function of the

applications. The solutions architect uses Cost Explorer and notices that the cost in the EC2-Other category is consistently high. A further review shows that NatGateway-Bytes charges are increasing the cost in the EC2-Other category. What should the solutions architect do to meet these requirements?

- A. Enable VPC Flow Logs and Amazon Detective. Review Detective findings for traffic that is not related to Kinesis Data Streams. Configure security groups to block that traffic.
- B. Enable VPC Flow Logs. Use Amazon Athena to analyze the logs for traffic that can be removed. Ensure that security groups are blocking traffic that is responsible for high costs.
- C. Add an interface VPC endpoint for Kinesis Data Streams to the VPC. Ensure that applications have the correct IAM permissions to use the interface VPC endpoint.
- **D. Add an interface VPC endpoint for Kinesis Data Streams to the VPC. Ensure that the VPC endpoint policy allows traffic from the applications.**

**Answer: D**

Explanation:

Explanation

<https://docs.aws.amazon.com/vpc/latest/privatelink/vpc-endpoints-access.html>

<https://aws.amazon.com/premiumsupport/knowledge-center/vpc-reduce-nat-gateway-transfer-costs/> VPC endpoint policies enable you to control access by either attaching a policy to a VPC endpoint or by using additional fields in a policy that is attached to an IAM user, group, or role to restrict access to only occur via the specified VPC endpoint.

#### NEW QUESTION # 295

A company is using Amazon API Gateway to deploy a private REST API that will provide access to sensitive data. The API must be accessible only from an application that is deployed in a VPC.

The company deploys the API successfully. However, the API is not accessible from an Amazon EC2 instance that is deployed in the VPC.

Which solution will provide connectivity between the EC2 instance and the API?

- A. Create an interface VPC endpoint for API Gateway. Attach an endpoint policy that allows `apigateway:*` actions. Disable private DNS naming for the VPC endpoint. Configure an API resource policy that allows access from the VPC. Use the VPC endpoint's DNS name to access the API.
- B. Create an Application Load Balancer (ALB) and a VPC Link. Configure private integration between API Gateway and the ALB. Use the ALB endpoint's DNS name to access the API.
- **C. Create an interface VPC endpoint for API Gateway. Attach an endpoint policy that allows the `execute-api:Invoke` action. Enable private DNS naming for the VPC endpoint. Configure an API resource policy that allows access from the VPC endpoint. Use the API endpoint's DNS names to access the API.**
- D. Create a Network Load Balancer (NLB) and a VPC link. Configure private integration between API Gateway and the NLB. Use the API endpoint's DNS names to access the API.

**Answer: C**

#### NEW QUESTION # 296

A solutions architect has developed a web application that uses an Amazon API Gateway Regional endpoint and an AWS Lambda function. The consumers of the web application are all close to the AWS Region where the application will be deployed. The Lambda function only queries an Amazon Aurora MySQL database. The solutions architect has configured the database to have three read replicas. During testing, the application does not meet performance requirements. Under high load, the application opens a large number of database connections.

The solutions architect must improve the application's performance.

Which actions should the solutions architect take to meet these requirements? (Choose two.)

- **A. Use RDS Proxy to set up a connection pool to the reader endpoint of the Aurora database.**
- B. Change the API Gateway endpoint to an edge-optimized endpoint.
- C. Use the cluster endpoint of the Aurora database.
- **D. Move the code for opening the database connection in the Lambda function outside of the event handler.**
- E. Use the Lambda Provisioned Concurrency feature.

**Answer: A,D**

Explanation:

Connect to RDS outside of Lambda handler method to improve performance

<https://awstut.com/en/2022/04/30/connect-to-rds-outside-of-lambda-handler-method-to-improve-performance-en/> Using RDS Proxy, you can handle unpredictable surges in database traffic. Otherwise, these surges might cause issues due to oversubscribing connections or creating new connections at a fast rate. RDS Proxy establishes a database connection pool and reuses connections in this pool.

This approach avoids the memory and CPU overhead of opening a new database connection each time. To protect the database against oversubscription, you can control the number of database connections that are created.

<https://docs.aws.amazon.com/AmazonRDS/latest/AuroraUserGuide/rds-proxy.html>

### NEW QUESTION # 297

A gaming company created a game leaderboard by using a Multi-AZ deployment of an Amazon RDS database. The number of users is growing, and the queries to get individual player rankings are getting slower over time. The company expects a surge in users for an upcoming version and wants to optimize the design for scalability and performance.

Which solution will meet these requirements?

- A. Stream the leaderboard data by using Amazon Kinesis Data Firehose with an Amazon S3 bucket as the destination. Query the S3 bucket by using Amazon Athena for the leaderboard.
- B. Add a read-only replica to the RDS DB instance. Add an RDS Proxy database proxy.
- **C. Keep the leaderboard data in the RDS DB instance. Provision a Multi-AZ deployment of an Amazon ElastiCache for Redis cluster.**
- D. Migrate the database to Amazon DynamoDB. Store the leader different tables. Use Apache HiveQL JOIN statements to build the leaderboard

**Answer: C**

Explanation:

Explanation

<https://aws.amazon.com/blogs/database/building-a-real-time-gaming-leaderboard-with-amazon-elasticache-for-re>

### NEW QUESTION # 298

A company is planning to host a web application on AWS and works to load balance the traffic across a group of Amazon EC2 instances. One of the security requirements is to enable end-to-end encryption in transit between the client and the web server.

Which solution will meet this requirement?

- A. Place the EC2 instances behind an Application Load Balancer (ALB). Provision an SSL certificate using AWS Certificate Manager (ACM), and associate the SSL certificate with the ALB. Provision a third-party SSL certificate and install it on each EC2 instance. Configure the ALB to listen on port 443 and to forward traffic to port 443 on the instances.
- B. Associate the EC2 instances with a target group. Provision an SSL certificate using AWS Certificate Manager (ACM). Create an Amazon CloudFront distribution and configure it to use the SSL certificate. Set CloudFront to use the target group as the origin server
- **C. Place the EC2 instances behind an Application Load Balancer (ALB) Provision an SSL certificate using AWS Certificate Manager (ACM), and associate the SSL certificate with the ALB. Export the SSL certificate and install it on each EC2 instance. Configure the ALB to listen on port 443 and to forward traffic to port 443 on the instances.**
- D. Place the EC2 instances behind a Network Load Balancer (NLB). Provision a third-party SSL certificate and install it on the NLB and on each EC2 instance. Configure the NLB to listen on port 443 and to forward traffic to port 443 on the instances.

**Answer: C**

Explanation:

Explanation

Option A is correct because placing the EC2 instances behind an Application Load Balancer (ALB) and associating an SSL certificate from AWS Certificate Manager (ACM) with the ALB enables encryption in transit between the client and the ALB. Exporting the SSL certificate and installing it on each EC2 instance enables encryption in transit between the ALB and the web server. Configuring the ALB to listen on port 443 and to forward traffic to port 443 on the instances ensures that HTTPS is used for both connections. This solution achieves end-to-end encryption in transit for the web application<sup>12</sup> References: 1:
