

MB-820 Exam Preview - Exam MB-820 Score

P.S. Free 2026 Microsoft MB-820 dumps are available on Google Drive shared by Actual4test: https://drive.google.com/open?id=1NJw_rjYkY4b_sny_sCJwGzRSbUDStX

After so many years' development, our MB-820 exam torrent is absolutely the most excellent than other competitors, the content of it is more complete, the language of it is more simply. Once you use our MB-820 latest dumps, you will save a lot of time. High effectiveness is our great advantage. After twenty to thirty hours' practice, you are ready to take the real MB-820 Exam Torrent. The results will never let you down. You just need to wait for obtaining the certificate.

Microsoft MB-820 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• Develop by using AL objects: Building and extending tables and reports is discussed in this topic. It also explains Designing and creating an XMLport. Lastly, it discusses how to work with entitlement and permission set objects.
Topic 2	<ul style="list-style-type: none">• Integrate Business Central with other applications: Accessing Representational State Transfer (REST) services is discussed in this topic. It also explains implementation of APIs.
Topic 3	<ul style="list-style-type: none">• Describe Business Central: Describing the components and capabilities of Business Central, and describing the core solution and extensions approach for Business Central are focal points of this topic. It also explains the difference between Business Central Online and Business Central on-premises features.
Topic 4	<ul style="list-style-type: none">• Work with development tools: Implementing semi-automated test processes and managing and assessing telemetry are its sub-topics.
Topic 5	<ul style="list-style-type: none">• Develop by using AL: How to Customize the UI experience and Use AL for business central extension is discussed here. It also delves into explaining the essential development standards.

Exam MB-820 Score - New MB-820 Test Dumps

Our website is considered to be the most professional platform offering MB-820 practice guide, and gives you the best knowledge of the MB-820 study materials. Passing the exam has never been so efficient or easy when getting help from our MB-820 Preparation engine. We can claim that once you study with our MB-820 exam questions for 20 to 30 hours, then you will be able to pass the exam with confidence.

Microsoft Dynamics 365 Business Central Developer Sample Questions (Q48-

Q53):

NEW QUESTION # 48

A developer creates a profile for part-time shop supervisors and adds customizations.

You plan to add new requirements to the profile.

You need to analyze the code to understand the profile and make sure there are no errors.

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation:

The Part Time Shop Supervisor profile will be applied only to users with "Register Time" = true on User Setup: No Variables, procedures, and triggers cannot be added on page customization objects: Yes Line 10 should use extends instead of customizes: No In line 18, "Unit Cost" will be moved after "Costing Method": Yes The Part Time Shop Supervisor profile will be applied only to users with "Register Time" = true on User Setup.

* No

* The code doesn't contain any reference to the User Setup table or the Register Time field, so this is not correct. Profiles are not applied conditionally based on fields like this.

Variables, procedures, and triggers cannot be added on page customization objects.

* Yes

* Page customization objects are meant for UI modifications, such as moving or hiding fields. You cannot add variables, procedures, or triggers in a page customization object.

Line 10 should use extends instead of customizes.

* No

* In AL, when customizing a page within a profile, you use customizes rather than extends. Extends is used when modifying base application objects, but customizes is used to customize pages within a profile.

In line 18, "Unit Cost" will be moved after "Costing Method".

* Yes

* The code in line 18 is correct. The moveafter directive will move the "Unit Cost" field after the "Costing Method" field on the page layout.

NEW QUESTION # 49

Hotspot Question

A company uses Business Central. The company has branches in different cities.

A worker reports that each time they generate a daily summary report, they get an error message that they do not have permissions.

You need to resolve the issue.

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

NEW QUESTION # 50

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result these questions will not appear in the review screen.

A company plans to optimize its permission sets.

The company has the following permission sets:

You need to provide the following implementation for a third permission set:

* Create a new Permission Set C that is a composite of Permission Set A and Permission Set B.

* Assign Permission Set C to a user.

You need to ensure that the user has only read access to the Job table.

Solution: Set the Excluded Permission Sets property to Permission Set B.
Does the solution meet the goal?

- A. Yes
- **B. No**

Answer: B

NEW QUESTION # 51

You need to define the tables used for the non-conformity entity.
What should you use?

- A. supplemental table to introduce the non-conformity lines
- **B. document table to introduce the non-conformity entities**
- C. document history table to introduce the non-conformity entities

Answer: B

Explanation:

Table Structure in Business Central: When creating entities such as "non-conformity" entities in Business Central, you use document tables to represent entities that have a header and line structure. In this case, the non-conformity entity has:

A header with common information (Non-conformity Number, Date, Vendor No., etc.).

One or more lines representing the detailed information for each non-conforming item.

Document Table Usage:

Document Table: A document table is the correct table type for scenarios where you have a header (with general information like vendor details) and lines (with detailed, item-specific information).

Document tables are typically used for entities such as Sales Orders, Purchase Orders, or any other transactional data where you have both header and line information.

Supplemental Table (Option C):

Supplemental tables are usually used to add supplementary information to existing data in Business Central. In this case, we need to store detailed line information, which is a core part of the entity rather than supplementary data, so a supplemental table would not be appropriate here.

Document History Table (Option A):

Document history tables are used to track changes and historical data for entities but are not suitable for the main introduction of the entity and its lines. This option is also not appropriate.

Introduction to Business Central Tables

Document Tables in Business Central

Topic 2, Contoso, Ltd.

Overview

Contoso, Ltd. is a sales company in the manufacturing industry. It has subsidiaries in multiple countries/regions, each with its own localization. The subsidiaries must be data-independent from each other. Contoso, Ltd. uses an external business partner to manage the subcontracting of some manufacturing items. Contoso, Ltd. has different sectors with data security between sectors required.

Contoso, Ltd. uses Business Central online as the main ERP for financial, sales, purchase, warehouse, and manufacturing processes. It has employees that use the Business Central web application and external applications. The company has a custom external mobile app under development. The IT department and its partners installed custom extensions to satisfy the company's requirements where the functionality is not available natively.

Contoso, Ltd. interacts with external services provided by customers and partners. Different applications interact with SOAP and OData endpoints exposed from Business Central.

An external business partner of Contoso, Ltd. exposed a REST API for receiving details about new subcontracting orders and for sending the planned release date of each subcontracting order received.

Contoso, Ltd. has not activated the monitoring of the tenant and has no internal telemetry for its apps.

Custom reporting must be created to meet the requirements of the different departments.

Contoso, Ltd. has the following tenant management considerations:

IT department

- * The IT department requires the ability to monitor the tenant to prevent performance problems and detect possible anomalies.
- * The IT department plans to use Azure Application Insights and Log Analytics to inspect the ingested telemetry signals.
- * All tenant upgrades are automatically handled by Microsoft. The IT department does not check for update availability or for tenant-related notifications.
- * The IT department has not configured the receipt of tenant-related notifications from the Business Central admin center.

External business partner

* The external business partner must add custom telemetry to an application created for Contoso. Ltd. to monitor a business process.

* Custom telemetry signals for the application must be visible only on the partner's telemetry.

SOAP

* Contoso, Ltd. plans to dismiss using the SOAP protocol for integrations.

* Contoso, Ltd. must be able to detect if external applications are using its Business Central SOAP endpoints.

Issue

The Business Central tenant is upgraded by Microsoft to a new major version during the night.

Users report that one of the Contoso. Ltd. extensions disappeared from the tenant The IT department confirms that the extension is still published.

Contoso. Ltd. plans to create a custom mobile application that has the following requirements:

* The app must be used by employees to check item details from the ERP in real time and to report issues that occur during the manufacturing process.

* An AL extension must be created for handling archived issues.

* Business Central development guidelines must be followed when implementing modules.

* A module must be implemented for the reporting and tracking of issues information. You plan to call this module Issue Management The module must expose a method nan Postlude.

* Code modifications will be required over time.

* The Issue Management process must be split into two extensions:

o ISSUE BASE: main extension

o ISSUE EXT: second extension with dependency from ISSUE BASE

* In the version 1.0.0.0 of the ISSUE BASE extension, you plan to create an Issue table that contains a global Decimal variable named Issue Total.

* In the version 1.0.0.0 of the ISSUE BASE extension, you plan to define a table named Issue Category with a Description field defined as follows:

field (2; Description; Text[SG])

{

DataClassification * CustoaerContent;

>

* The Issue table defined in ISSUE BASE extension contains a Clone procedure defined as follows:

procedure Corte () begin end;

* In the ISSUE EXT extension, you create a table extension object of the Issue table.

* The table extension object of the Issue table must access the Issue Total: Decimal variable.

After weeks of usage, you discover that you must remove the Description field and the Clone procedure because they are no longer required.

In a new version of the ISSUE BASE extension, you create a new Issue Type table. You must move data row by row from a previously obsolete Issue Category table to the new Issue Type table. Because a large amount of data must be moved, you must write an Upgrade codeunit by using the DataTransfer object.

The IT department creates a custom API for exposing the custom Issue table. The API provides an action for copying an issue to a new table. The action is defined as follows:

(Service Enabled]

procedure Copy (vary action Context: WebServiceActionContext)

begin

end;

Contoso, Ltd. must create an API in Business Central to expose item details to the mobile application.

* The API must have the lowest possible impact on the production environment when used during working hours.

* The API must only support Get operations.

A user of the ISSUE BASE extension in Business Central reports a problem.

To debug the problem, snapshot debugging with the following configuration was activated:

□ You discover that the debugging is not triggering.

Contoso, Ltd. must connect Business Central to the external API provided by the business partner. This will be used for the partner to send the details of new subcontracting orders to fulfill the sales demand, and for receiving the planned release date of each order sent. The integration requirements are as follows:

* The business partner will provide a REST API secured with basic authentication. Credentials to access the API will be shared with Contoso, Ltd.

* The API for sending subcontracting orders must be called by sending an authenticated POST request to the given endpoint.

* The API for retrieving the order no. and planned release date of each subcontracting order responds with the following JSON:

□ Each order no. must be retrieved.
