2023 C1000-130 Guide & First-grade IBM C1000-130

2023 C1000-130 Guide - Authorized C1000-130 Pdf, Valid IBM Cloud Pak for Integration V2021.2 Administration Exam Syllabus

BONUS!!! Download part of Itcertkey C1000-130 dumps for free: <https://drive.google.com/open?id=1kjwdxxKXmLw-VW-zWXLQjD1tbgrRl51Q>

Our C1000-130 exam materials are the most reliable products for customers. If you need to prepare an exam, we hope that you can choose our C1000-130 study guide as your top choice. In the past ten years, we have overcome many difficulties and never give up. And we have quickly grown up as the most influential company in the market. And our C1000-130 preparation questions are the most popular among the candidates.

To pass the IBM C1000-130 Certification Exam, candidates must have a strong understanding of IBM Cloud Pak for Integration architecture, including the use of APIs, microservices, and containers. They must also be proficient in deploying and managing IBM Cloud Pak for Integration components, such as IBM App Connect, IBM Cloud Pak for Integration Platform Navigator, and IBM Event Streams.

IBM Cloud Pak for Integration is a platform that enables businesses to integrate and connect applications, data, and systems across multiple environments. It provides a unified and secure integration experience, allowing organizations to streamline their business processes, reduce costs, and accelerate innovation. With the IBM C1000-130 Certification, you can demonstrate your proficiency in managing and administering this powerful integration platform.

Review C1000-130 Guide, Related C1000-130 Exams

The content and design of our C1000-130 learning quiz are all perfect and scientific, and you will know it when you use this. Of course, we don't need you to spend a lot of time on our C1000-130 exam questions. As long as you make full use of your own piecemeal time after 20 to 30 hours of study, you can go to the exam. The users of our C1000-130 Study Materials have been satisfied with their results. I believe you are the next person to pass the exam!

IBM Cloud Pak for Integration V2021.2 Administration Sample Questions (Q17-Q22):

NEW QUESTION # 17

Assuming that IBM Common Services are installed in the `ibm-common-services` namespace and the Cloud Pak for Integration is installed in the `cp4i` namespace, what is needed for the authentication to the License Service APIs?

- A. A password available in `platform-auth-idp-credentials` in the `ibm-common-services` namespace.
- B. A password available in `ibm-entitlement-key` in the `cp4i` namespace.
- C. A token available in `ibm-licensing-token secret` in the `ibm-common-services` namespace.
- D. A token available in `ibm-licensing-token secret` in the `cp4i` namespace.

Answer: C

Explanation:

IBM Cloud Pak for Integration (CP4I) relies on IBM Common Services for authentication, licensing, and other foundational functionalities. The License Service API is a key component that enables the monitoring and reporting of software license usage across the cluster.

Authentication to the License Service API

To authenticate to the IBM License Service APIs, a token is required, which is stored in the `ibm-licensing-token secret` within the `ibm-common-services` namespace (where IBM Common Services are installed).

When Cloud Pak for Integration (installed in the `cp4i` namespace) needs to interact with the License Service API, it retrieves the authentication token from this secret in the `ibm-common-services` namespace.

Why is Option D Correct?

The `ibm-licensing-token secret` is automatically created in the `ibm-common-services` namespace when the IBM License Service is deployed.

This token is required for authentication when querying licensing information via the License Service API.

Since IBM Common Services are installed in `ibm-common-services`, and the licensing service is part of these foundational services, authentication tokens are stored in this namespace rather than the `cp4i` namespace.

Analysis of Other Options:

Option

Correct/Incorrect

Reason

A . A token available in `ibm-licensing-token secret` in the `cp4i` namespace.

☐ Incorrect

The licensing token is stored in the `ibm-common-services` namespace, not in `cp4i`.

B . A password available in `platform-auth-idp-credentials` in the `ibm-common-services` namespace.

☐ Incorrect

This secret is related to authentication for the IBM Identity Provider (OIDC) and is not used for licensing authentication.

C . A password available in `ibm-entitlement-key` in the `cp4i` namespace.

☐ Incorrect

The `ibm-entitlement-key` is used for accessing IBM Container Registry to pull images, not for licensing authentication.

D . A token available in `ibm-licensing-token secret` in the `ibm-common-services` namespace.

☐ Correct

This is the correct secret that contains the required token for authentication to the License Service API.

NEW QUESTION # 18

What automates permissions-based workload isolation in Foundational Services?

- A. The IAM operator.

- B. Node taints and pod tolerations.
- C. The Operand Deployment Lifecycle Manager.
- **D. The NamespaceScope operator.**

Answer: D

Explanation:

The NamespaceScope operator is responsible for managing and automating permissions-based workload isolation in IBM Cloud Pak for Integration (CP4I) Foundational Services. It allows multiple namespaces to share common resources while maintaining controlled access, thereby enforcing isolation between workloads.

Key Functions of the NamespaceScope Operator:

Enables namespace scoping, which helps define which namespaces have access to shared services.

Restricts access to specific components within an environment based on namespace policies.

Automates workload isolation by enforcing access permissions across multiple namespaces.

Ensures compliance with IBM Cloud security standards by providing a structured approach to multi-tenant deployments.

Why Other Options Are Incorrect:

A . Operand Deployment Lifecycle Manager: Manages lifecycle and deployment of operands in IBM Cloud Paks but does not specifically handle workload isolation.

C . Node taints and pod tolerations: These are Kubernetes-level mechanisms to control scheduling of pods on nodes but do not directly automate permissions-based workload isolation.

D . The IAM operator: Manages authentication and authorization but does not specifically focus on namespace-based workload isolation.

NEW QUESTION # 19

Which two statements are true about the Ingress Controller certificate?

- **A. By default, OpenShift uses an internal self-signed certificate.**
- B. The administrator can specify a custom certificate at later time.
- C. The Ingress Controller does not support the use of custom certificate.
- **D. By default, OpenShift does not use any certificate if one is not applied during the initial setup.**
- E. Certificate assignment is only applicable during initial setup.

Answer: A,D

NEW QUESTION # 20

An administrator is looking to install Cloud Pak for Integration on an OpenShift cluster. What is the result of executing the following?

```
apiVersion: logging.openshift.io/v1
kind: ClusterLogging
metadata:
  name: logging
  namespace: openshift-logging
spec:
  logStore:
    type: "elasticsearch"
    elasticsearch:
      nodeCount: 1
      storage: {}
      redundancyPolicy: ZeroRedundancy
```

- A. A single infrastructure node with persisted ElasticSearch.
- **B. A single node ElasticSearch cluster with no persistent storage.**
- C. A single node ElasticSearch cluster which auto scales when redundancyPolicy is set to MultiRedundancy.
- D. A single node ElasticSearch cluster with default persistent storage.

Answer: B

Explanation:

The given YAML configuration is for ClusterLogging in an OpenShift environment, which is used for centralized logging. The key part of the specification that determines the behavior of Elasticsearch is:

logStore:

type: "elasticsearch"

elasticsearch:

nodeCount: 1

storage: {}

redundancyPolicy: ZeroRedundancy

Analysis of Key Fields:

nodeCount: 1

This means the Elasticsearch cluster will consist of only one node (single-node deployment).

storage: {}

The empty storage field implies no persistent storage is configured.

This means that if the pod is deleted or restarted, all stored logs will be lost.

redundancyPolicy: ZeroRedundancy

ZeroRedundancy means there is no data replication, making the system vulnerable to data loss if the pod crashes.

In contrast, a redundancy policy like MultiRedundancy ensures high availability by replicating data across multiple nodes, but that is not the case here.

Evaluating Answer Choices:

Option

Explanation:

Correct?

A . A single node ElasticSearch cluster with default persistent storage.

Incorrect, because storage: {} means no persistent storage is configured.

☐

B . A single infrastructure node with persisted ElasticSearch.

Incorrect, as this is not configuring an infrastructure node, and storage is not persistent.

☐

C . A single node ElasticSearch cluster which auto scales when redundancyPolicy is set to MultiRedundancy.

Incorrect, because setting MultiRedundancy does not automatically enable auto-scaling. Scaling needs manual intervention or Horizontal Pod Autoscaler (HPA).

☐

D . A single node ElasticSearch cluster with no persistent storage.

Correct, because nodeCount: 1 creates a single node, and storage: {} ensures no persistent storage.

☐

Final answer:

☐ D. A single node ElasticSearch cluster with no persistent storage.

NEW QUESTION # 21

When using the Platform Navigator, what permission is required to add users and user groups?

- A. Super-user
- B. User
- **C. Administrator**
- D. root

Answer: C

Explanation:
