

# Book Palo Alto Networks SSE-Engineer Free & SSE-Engineer Exam Cram Questions

P.S. Free 2025 Palo Alto Networks SSE-Engineer dumps are available on Google Drive shared by Test4Sure:  
[https://drive.google.com/open?id=1xP0\\_ml0JW-pfLxOWtwulM6JwmC8klmPY](https://drive.google.com/open?id=1xP0_ml0JW-pfLxOWtwulM6JwmC8klmPY)

Our product boosts varied functions to be convenient for you to master the SSE-Engineer training materials and get a good preparation for the exam and they include the self-learning function, the self-assessment function, the function to stimulate the exam and the timing function. We provide 24-hours online on SSE-Engineer Guide prep customer service and the long-distance professional personnel assistance to for the client. If clients have any problems about our SSE-Engineer study materials they can contact our customer service at any time.

## Palo Alto Networks SSE-Engineer Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>• Prisma Access Services: This section of the exam measures the skills of Cloud Security Architects and covers advanced features within Prisma Access. Candidates are assessed on how to configure and implement enhancements like App Acceleration, traffic replication, IoT security, and privileged remote access. It also includes implementing SaaS security and setting up effective policies related to security, decryption, and QoS. The section further evaluates how to create and manage user-based policies using tools like the Cloud Identity Engine and User ID for proper identity mapping and authentication.</li></ul>
Topic 2	<ul style="list-style-type: none"><li>• Prisma Access Troubleshooting: This section of the exam measures the skills of Technical Support Engineers and covers the monitoring and troubleshooting of Prisma Access environments. It includes the use of Prisma Access Activity Insights, real-time alerting, and a Command Center for visibility. Candidates are expected to troubleshoot connectivity issues for mobile users, remote networks, service connections, and ZTNA connectors. It also focuses on resolving traffic enforcement problems including security policies, HIP enforcement, User-ID mismatches, and split tunneling performance issues.</li></ul>
Topic 3	<ul style="list-style-type: none"><li>• Prisma Access Administration and Operation: This section of the exam measures the skills of IT Operations Managers and focuses on managing Prisma Access using Panorama and Strata Cloud Manager. It tests knowledge of multitenancy, access control, configuration, and version management, and log reporting. Candidates should be familiar with releasing upgrades and leveraging SCM tools like Copilot. The section also evaluates the deployment of the Strata Logging Service and its integration with Panorama and SCM, log forwarding configurations, and best practice assessments to maintain security posture and compliance.</li></ul>

Topic 4	<ul style="list-style-type: none"> <li>• <b>Prisma Access Planning and Deployment:</b> This section of the exam measures the skills of Network Security Engineers and covers foundational knowledge and deployment skills related to Prisma Access architecture. Candidates must understand key components such as security processing nodes, IP addressing, DNS, and compute locations. It evaluates routing mechanisms including routing preferences, backbone routing, and traffic steering. The section also focuses on deploying Prisma Access service infrastructure for mobile users using VPN clients or explicit proxy and configuring remote networks. Additional topics include enabling private application access using service connections, Colo-Connect, and ZTNA connectors, implementing identity authentication methods like SAML, Kerberos, and LDAP, and deploying Prisma Access Browser for secure user access.</li> </ul>

## Palo Alto Networks SSE-Engineer Exam Cram Questions, SSE-Engineer Latest Test Experience

Are you staying up for the SSE-Engineer exam day and night? Do you have no free time to contact with your friends and families because of preparing for the exam? Are you tired of preparing for different kinds of exams? If your answer is yes, please buy our SSE-Engineer Exam Questions, which is equipped with a high quality. We can make sure that our SSE-Engineer study materials have the ability to help you solve your problem, and you will not be troubled by these questions above.

## Palo Alto Networks Security Service Edge Engineer Sample Questions (Q43-Q48):

### NEW QUESTION # 43

A customer is implementing Prisma Access (Managed by Strata Cloud Manager) to connect mobile users, branch locations, and business-to-business (B2B) partners to their data centers.

The solution must meet these requirements:

The mobile users must have internet filtering, data center connectivity, and remote site connectivity to the branch locations.

The branch locations must have internet filtering and data center connectivity.

The B2B partner connections must only have access to specific data center internally developed applications running on non-standard ports.

The security team must have access to manage the mobile user and access to branch locations.

The network team must have access to manage only the partner access.

Which two options will allow the engineer to support the requirements? (Choose two.)

- A. Enable Remote Networks Advertise Default Route.
- **B. Configure Remote Networks and define the branch IP subnets using Static Routes.**
- C. Configure the CPE with Static Routes pointing to Prisma Access Infrastructure and Mobile User routes.
- **D. Enable eBGP for dynamic routing and configure Remote Networks.**

**Answer: B,D**

Explanation:

Enabling eBGP for dynamic routing and configuring Remote Networks ensures seamless connectivity between branch locations, mobile users, and the data center. eBGP allows Prisma Access to dynamically exchange routes with the Customer Premises Equipment (CPE), optimizing path selection without requiring manual updates. Configuring Remote Networks and defining branch IP subnets using static routes ensures controlled and segmented routing, aligning with security policies. This setup provides proper internet filtering, data center connectivity, and restricted access for B2B partners while keeping management responsibilities aligned.

### NEW QUESTION # 44

Strata Logging Service is configured to forward logs to an external syslog server; however, a month later, there is a disruption on the syslog server.

Which action will send the missing logs to the external syslog server?

- A. Configure a log filter under the syslog server profile with the affected time range.

- B. Export the logs from Strata Logging Service, and then manually import them to the syslog server.
- C. Configure a replay profile with the affected time range and associate it with the affected syslog server profile.
- D. Delete the affected syslog server profile and create a new one.

**Answer: C**

Explanation:

The Strata Logging Service allows log replay, which enables resending logs that were not successfully forwarded to an external syslog server due to disruptions. By configuring a replay profile with the affected time range and associating it with the syslog server profile, Prisma Access will resend the missing logs, ensuring that all relevant data is restored in the external logging system. This approach is the most efficient and automated way to recover missing logs.

#### NEW QUESTION # 45

Where are tags applied to control access to Generative AI when implementing AI Access Security?

- A. To user devices for identifying and controlling which Generative AI applications they can access
- B. To security rules for defining which types of Generative AI applications are allowed or blocked
- C. To Generative AI applications for identifying sanctioned, tolerated, or unsanctioned applications
- D. To Generative AI URL categories for classifying trusted and untrusted Generative AI websites

**Answer: C**

Explanation:

When implementing AI Access Security, tags are applied to Generative AI applications to classify them as sanctioned, tolerated, or unsanctioned. This allows organizations to enforce policy-based access control over AI tools, ensuring that only approved applications are accessible while restricting or monitoring usage of untrusted or high-risk AI platforms. This classification helps security teams manage AI-related risks and compliance effectively.

#### NEW QUESTION # 46

How can an engineer verify that only the intended changes will be applied when modifying Prisma Access policy configuration in Strata Cloud Manager (SCM)?

- A. Select the most recent job under Operations > Push Status to view the pending changes that would apply to Prisma Access.
- B. Compare the candidate configuration and the most recent version under "Config Version Snapshots/
- C. Review the SCM portal for blue circular indicators next to each configuration menu item and ensure only the intended areas of configuration have this indicator.
- D. Open the push dialogue in SCM to preview all changes which would be pushed to Prisma Access.

**Answer: D**

Explanation:

Palo Alto Networks documentation explicitly states that the "Preview Changes" functionality within the Strata Cloud Manager (SCM) push dialogue allows engineers to review a detailed summary of all modifications that will be applied to the Prisma Access configuration before committing the changes. This is the primary and most reliable method to ensure only the intended changes are deployed.

Let's analyze why the other options are incorrect based on official documentation:

\* A. Review the SCM portal for blue circular indicators next to each configuration menu item and ensure only the intended areas of configuration have this indicator. While blue circular indicators might signify unsaved changes within a specific configuration section, they do not provide a comprehensive, consolidated view of all pending changes across different policy areas. This method is insufficient for verifying the entirety of the intended modifications.

\* B. Compare the candidate configuration and the most recent version under "Config Version Snapshots". While comparing configuration snapshots is a valuable method for understanding historical changes and potentially identifying unintended deviations after a push, it does not provide a real-time preview of the pending changes before they are applied during the current modification session.

\* C. Select the most recent job under Operations > Push Status to view the pending changes that would apply to Prisma Access. The "Push Status" section primarily displays the status and details of completed or in-progress push operations. It does not offer a preview of the changes before a push is initiated.

Therefore, the "Preview Changes" feature within the push dialogue is the documented and recommended method for an engineer to
