

Brain Dump 1Z0-1109-25 Free, 1Z0-1109-25 Latest Study Materials

P.S. Free & New 1Z0-1109-25 dumps are available on Google Drive shared by RealExamFree: <https://drive.google.com/open?id=1RXWpBeP2ccOSEIK-v6PMJrQNNSpJyJyA>

You just need to get RealExamFree's Oracle Certification 1Z0-1109-25 Exam exercises and answers to do simulation test, you can pass the Oracle certification 1Z0-1109-25 exam successfully. If you have a Oracle 1Z0-1109-25 the authentication certificate, your professional level will be higher than many people, and you can get a good opportunity of promoting job. Add RealExamFree's products to cart right now! RealExamFree can provide you with 24 hours online customer service.

Oracle 1Z0-1109-25 Exam Syllabus Topics:

Topic	Details
Topic 1	Understand DevOps Principles and Effectively Work with Containerization Services: This section of the exam measures the skills of DevOps Engineers and Cloud Architects in applying DevOps methodologies and containerization practices. It covers implementing a microservices architecture, creating Docker containers, and managing Oracle Cloud Infrastructure Registry (OCIR) and Container Instances to streamline application deployment and scalability.
Topic 2	Managing Containers Using Container Orchestration Engine: This part assesses the abilities of Kubernetes Administrators and Containerization Specialists in managing Oracle Container Engine for Kubernetes (OKE). It covers cluster creation, scaling, upgrades, networking, storage, and security configurations to optimize containerized applications in OCI environments.
Topic 3	- Enabling DevSecOps: This domain measures the skills of Security Engineers and DevSecOps Practitioners in integrating security into DevOps workflows. It includes managing encryption keys with OCI Vault, securing CI - CD pipelines, and ensuring container image security to align with DevSecOps best practices.
Topic 4	- Configuring and Managing Continuous Integration and Continuous Delivery (CI - CD): This section tests the knowledge of CI - CD Engineers and Automation Specialists in automating the software lifecycle using OCI DevOps Service. It includes managing source code repositories, configuring build - deployment pipelines, and creating artifacts for automated deployments across environments.

High Pass-Rate Brain Dump 1Z0-1109-25 Free to Obtain Oracle Certification

Tech firms award high-paying job contracts to Oracle Cloud Infrastructure 2025 DevOps Professional (1Z0-1109-25) certification holders. Every year many aspirants appear in the 1Z0-1109-25 test of the certification, but few of them cannot crack it because of not finding reliable Oracle Cloud Infrastructure 2025 DevOps Professional prep materials. So, you must prepare with real exam questions to pass the certification exam. If you don't rely on actual exam questions, you will fail and loss time and money.

Oracle Cloud Infrastructure 2025 DevOps Professional Sample Questions (Q30-Q35):

NEW QUESTION # 30

A fully qualified path to a particular image in an OCIR repository is given as `iad.ocir.io/ansh81vrulzp/project01/acme-web-app:version2.0.test`.

Identify the two options with correct terms and their associated values. (Choose two.)

- A. `iad.ocir.io/ansh81vrulzp` represents `<region-key>`
- B. `ansh81vrulzp/project01/acme-web-app:version2.0.test` represents `<repo-name>`
- C. `iad` represents `<region-key>`
- D. `version2.0.test` represents `<tenancy-namespace>`
- E. `ansh81vrulzp` represents `<tenancy-namespace>`

Answer: C,E

Explanation:

`ansh81vrulzp` is the `<tenancy-namespace>`. In Oracle Cloud Infrastructure Registry (OCIR), the tenancy namespace uniquely identifies the tenancy and is used as part of the image path.

`iad` is the `<region-key>`. The region key is the shorthand identifier for the OCI region (`iad` represents Ashburn region), and it is used in the fully qualified path for images stored in the Oracle Cloud Infrastructure Registry (OCIR).

NEW QUESTION # 31

As a DevOps engineer working on an OCI project, you're setting up a deployment pipeline to automate your application deployments.

Which statement is false about deployment pipeline in OCI DevOps?

- A. You can add a Wait stage that adds a specified duration of delay in the pipeline.
- B. You can add a Traffic Shift stage that routes the traffic between two environments.
- C. You can add an Approval stage that pauses the deployment for a specified duration for manual decision from the approver.
- D. Using deployment pipeline, you can deploy helm charts in OCI Function.

Answer: D

Explanation:

Helm charts are used to manage Kubernetes deployments, not OCI Functions. Helm charts are deployed to Kubernetes clusters, such as OCI Container Engine for Kubernetes (OKE), to manage containerized applications. OCI Functions are serverless and do not use Helm charts for deployment.

NEW QUESTION # 32

Which command creates the docker registry secret required in the application manifests for OKE to pull images from Oracle Cloud Infrastructure Registry?

- A.

```
kubectl create secret docker-registry <secret-name> --docker-server=
<region-key>.ocir.io --docker-username=<tenancy-namespace>/<oci-
username> --docker-password='<oci-auth-token>' --docker-email=<email-
address>
```

- B.

```
kubectl create passwd docker-registry <secret-name> --docker-server=
<region-key>.oke.io --docker-username=<tenancy-namespace>/<oci-
username> --docker-password='<oci-auth-token>' --docker-email=<email-
address>
```

- C.

```
kubectl create secret docker-registry <secret-name> --docker-server=
<region-key>.ocir.io --docker-username=<oci-username> --docker-
password='<oci-auth-token>' --docker-email=<email-address>
```

- D.

```
kubectl create passwd docker-registry <secret-name> --docker-server=
<region-key>.oke.io --docker-username=<oci-username> --docker-
password='<oci-auth-token>' --docker-email=<email-address>
```

Answer: A

Explanation:

To create a Docker registry secret to pull images from the Oracle Cloud Infrastructure Registry (OCIR), you need to specify the correct parameters such as the region key, namespace, OCI username, and OCI authentication token.

Chosen command is correct because:

The `kubectl create secret docker-registry` command creates a Docker registry secret.

The `--docker-server=<region-key>.ocir.io` specifies the correct endpoint for OCIR.

The `--docker-username=<tenancy-namespace>/<oci-username>` provides both the tenancy namespace and the OCI username, which is the required format for authentication with OCIR.

The `--docker-password='<oci-auth-token>'` specifies the OCI auth token, which acts as a password for authentication.

The `--docker-email=<email-address>` is also included.

The other commands have errors, such as missing tenancy namespace or using incorrect flags (`passwd` instead of `secret`).

NEW QUESTION # 33

Why is it important to extract output artifacts from the Oracle Cloud Infrastructure (OCI) DevOps build pipeline and store them in an Artifact Registry repository?

- A. Output artifacts aren't permanent. If they are to be used in the Deliver Artifacts stage, they need to be exported as output artifacts to a registry.
- B. Storing build artifacts in registries helps the deployment pipeline differentiate output artifacts created by the build pipeline from artifacts copied from a Git repository.
- C. Deliver Artifacts is a required stage of the build pipeline, and the entire pipeline won't work if it is not included in order to extract artifacts after the Managed Build stage.
- D. All artifacts are permanently stored in the build pipeline. Extracting just the ones required for deployment tells the deployment pipeline which artifacts to use.

Answer: A

Explanation:

In OCI DevOps Build Pipeline, the output artifacts generated during the build are temporary and will be discarded unless explicitly stored in a persistent location. By extracting and storing these artifacts in an Artifact Registry (such as OCI Artifact Registry or OCI Container Registry), you ensure that they are available for subsequent stages, such as deployment.

Storing artifacts in a registry provides a persistent location where the deployment pipeline can access them, ensuring the artifacts are available for reliable deployment.

NEW QUESTION # 34

As a developer working on a software project to be deployed on OKE, you have created a Helm chart for your application. You want to deploy the chart using OCI DevOps service.

Which statement is true about deploying a Helm Chart using OCI DevOps service?

- A. A single chart can be installed only once into the same cluster, and create single release.
- B. The values.yaml file is a generic file located in the OCI Container Registry. You must create a reference to this file.
- **C. The Helm charts must be located in the OCI Container Registry repository for deployment.**
- D. Oracle Cloud Infrastructure (OCI) DevOps service supports deployment of Helm charts to Container Instances.

Answer: C

Explanation:

OCI DevOps service can be used to deploy Helm charts for Kubernetes-based applications running on Oracle Kubernetes Engine (OKE). For deploying the Helm chart through the OCI DevOps service, the Helm chart must be stored in the OCI Container Registry. This allows the OCI DevOps service to easily access the Helm chart during the deployment process.

NEW QUESTION # 35

.....

Oracle Cloud Infrastructure 2025 DevOps Professional exam is one of the top-rated Oracle 1Z0-1109-25 Exams. This Oracle Cloud Infrastructure 2025 DevOps Professional exam offers an industrial-recognized way to validate a candidate's skills and knowledge. Everyone can participate in Oracle Cloud Infrastructure 2025 DevOps Professional exam requirements after completing the Oracle Cloud Infrastructure 2025 DevOps Professional exam. With the Oracle Cloud Infrastructure 2025 DevOps Professional exam you can learn in-demand skills and upgrade your knowledge. You can enhance your salary package and you can get a promotion in your company instantly.
