SAP Certified Associate - Configuring SAP Ariba Strategic Sourcing Suite Sample Questions (Q18-Q23):

NEW QUESTION # 18

Which syntax is used for writing custom Validity Conditions?

- A. Python
- B. Regular expression
- C. XML
- **D. Scheme**

Answer: D

NEW QUESTION # 19

Users are able to publish a contract workspace without populating the Supplier field. What action can be performed on the Supplier field to force population before publishing?

- A. Enable Required
- B. Configure a visibility condition
- **C. Enable Require value before publish**
- D. Configure a validity condition

Answer: C

NEW QUESTION # 20

The full SAP Ariba Strategic Sourcing suite baseline (Greenfield baseline scenario) has been applied to the customer Test site. The customer and project team will configure SAP Ariba Sourcing and deploy that to the Production site, then configure and deploy the remaining solutions in stages. What does this mean for subsequent migration activities?

- A. If the baseline applied the full suite, the full suite must be configured and migrated to production at the same time.
- B. Subsequent migration activities will require a complete reconfiguration of existing solutions.
- **C. Both SAP Ariba Sourcing as well as subsequent migration activities would be Brownfield deployments.**
- D. Subsequent migration activities follow Bluefield deployment scenario.

Answer: C

NEW QUESTION # 21

A customer has requested that a Contracts field be added to an export event. After creating the field, assigning the appropriate checkbox in the advanced section, and publishing, this field still cannot be found in the export. What can be done to rectify this? (Select 2 correct answers)

- A. Custom fields cannot be added to import/exports
- **B. The data definition needs to be refreshed**
- **C. The field must be accepted and published in the data definition**
- D. A custom visibility expression needs to be added stating isVisibleInExport == true

Answer: B,C

Explanation:

To ensure a custom Contracts field appears in export events, it must be accepted and published in the Data Definition within the Integration Manager, which formally exposes it for integrations (B). Also, the Data Definition should be refreshed (D) so that the

export metadata is updated. A custom visibility expression is unnecessary, and custom fields can be added to import/export when configured correctly.

NEW QUESTION # 22

Which of the following considerations are important when creating custom fields? (Select 2 correct answers)

- A. Published field changes can be reverted via Un-publish to free up memory
- B. The data type of a field can be dynamically changed, depending on data type availability
- C. There's a limit to the number of fields, by data type, that can be added to a class
- D. When a field has been created and published, that field type has been consumed from the number of available fields on the class

Answer: C,D

Explanation:

SAP Ariba allocates a finite number of field "slots" per data type for each class. When a custom field is created and published, it consumes one of these slots. Therefore, there are limits to how many fields of each type you can create per class. The data type cannot be changed after creation, and un-publishing does not reclaim the allocated slot; you must delete the field to free resources. Planning field usage carefully avoids hitting these system limits.
