PAM-DEF Exam is designed to test the candidate's understanding of CyberArk PAM solutions, as well as their ability to implement and maintain these solutions in a real-world environment.

## **CyberArk Defender - PAM Sample Questions (Q141-Q146):**

#### NEW QUESTION # 141

How much disk space do you need on the server for a PAReplicate?

- A. 500 GB
- B. same as disk size on Satellite Vault
- C. same as disk size on Primary Vault
- D. 1 TB

**Answer: C**

#### NEW QUESTION # 142

You receive this error:

"Error in changepass to user domain\user on domain server(\domain.(winRc=5) Access is denied." Which root cause should you investigate?

- A. The domain controller is unreachable.
- B. The CPM service is disabled and will need to be restarted.
- C. The password has been changed recently and minimum password age is preventing the change.
- D. The account does not have sufficient permissions to change its own password.

**Answer: D**

Explanation:

Explanation

The error message "Error in changepass to user domain\user on domain server(\domain.(winRc=5) Access is denied" suggests that the account attempting to change the password does not have the necessary permissions to do so. This could be due to several reasons, such as the account not being part of the appropriate group with password change privileges, or specific restrictions set on the account that prevent password changes. It's important to verify the account's permissions and ensure it has the ability to change its own password within the domain.

References: The conclusion is based on common issues encountered in CyberArk's Privileged Access Management (PAM) when managing account passwords and the associated error codes. The CyberArk documentation and community discussions provide insights into troubleshooting such errors, where insufficient permissions are a frequent cause

#### NEW QUESTION # 143

What are the minimum permissions to add multiple accounts from a file when using PVWA bulk-upload?

(Choose three.)

- A. update account content
- B. add safes
- C. add accounts
- D. view safe members
- E. update account properties
- F. rename accounts

**Answer: A,C,E**

#### NEW QUESTION # 144

In accordance with best practice, SSH access is denied for root accounts on UNIX/LINUX system. What is the BEST way to allow CPM to manage root accounts.

- A. Configure the CPM to allow SSH logins.
- B. Create a non-privileged account on the target server. Allow this account the ability to SSH directly from the CPM machine. Configure this account as the Logon account of the target server's root account.
- C. Configure the Unix system to allow SSH logins.
- D. Create a privileged account on the target server. Allow this account the ability to SSH directly from the CPM machine. Configure this account as the Reconcile account of the target server's root account.

**Answer: B**
