Cisco Understanding Cisco Cybersecurity Operations Fundamentals Sample Questions (Q438-Q443):

NEW QUESTION # 438

Which attack method is being used when an attacker tries to compromise a network with an authentication system that uses only 4-digit numeric passwords and no username?

- A. replay
- **B. dictionary**
- C. SQL injection
- D. cross-site scripting

Answer: B

Explanation:

A dictionary attack is a method used to break into a password-protected computer or server by systematically entering every word in a dictionary as a password. In the context of an authentication system that uses only 4-digit numeric passwords, a dictionary attack would involve trying all possible combinations of 4-digit numbers until the correct one is found.

NEW QUESTION # 439

One of the objectives of information security is to protect the CIA of information and systems. What does CIA mean in this context?

- **A. confidentiality, integrity, and availability**
- B. confidentiality, identity, and availability
- C. confidentiality, integrity, and authorization
- D. confidentiality, identity, and authorization

Answer: A

Explanation:

CIA stands for confidentiality, integrity, and availability, which are the three main objectives of information security. Confidentiality means protecting the information from unauthorized access or disclosure. Integrity means ensuring the information is accurate and consistent, and preventing unauthorized modification or deletion. Availability means ensuring the information and systems are accessible and usable by authorized users when needed.
