### NEW QUESTION # 54

During verification in Production, a stakeholder reports that the imported form template appears outdated. What could be a likely reason for this?

- A. The system automatically reverted the template to a previous version during import.
- **B. The Test site template was not the latest version when exported.**
- C. The Production site does not support custom form templates.
- D. The Production site is missing certain parameter settings.

**Answer: B**

Explanation:

If an imported form template appears outdated in Production, the most common cause is that the version exported from Test was not the latest published version. SAP Ariba's export/import process is version- specific; only the selected version at export time is moved. If the latest updates weren't published or exported, Production will receive an older version.

SAP does not auto-revert templates to previous versions during import, and missing parameter settings typically do not affect template versions. Production supports custom templates as long as metadata and versions align.

Proper version control, including publishing the latest template version in Test before export, is essential to avoid this issue.
