SAP Certified Associate - Configuring SAP Ariba Strategic Sourcing Suite Sample Questions (Q46-Q51):

NEW QUESTION # 46

What system is provided by SAP Free of charge and provides an outline of how to deploy SAP Ariba solutions with a task list and project management format?

- A. SAP Cloud Project Studio
- **B. SAP Ariba Enablement Workbook**
- C. SAP Cloud Application Lifecycle Management
- D. SAP for Me

Answer: B

NEW QUESTION # 47

Custom partner bundles can be leveraged to share and apply baselines in which deployment scenario?

- A. Greenfield
- B. Brownfield
- C. Bluefield
- D. Grayfield

Answer: A

Explanation:

Custom partner bundles are predefined baseline configurations provided by SAP or implementation partners and are primarily used in Greenfield deployments, where a new SAP Ariba solution is being implemented from scratch. These bundles help accelerate deployment by applying standard best-practice settings and templates as a starting point in the Test environment.

In Bluefield or Brownfield deployments, which involve migration or upgrade of existing systems, incremental or selective configuration migration is more typical, and partner bundles are less relevant. Grayfield is not a recognized SAP Ariba deployment scenario.

Using partner bundles in Greenfield supports standardized setups and reduces manual configuration errors early in the project lifecycle, enabling faster time to value.

NEW QUESTION # 48

Users are able to publish a contract workspace without populating the Supplier field. What action can be performed on the Supplier field to force population before publishing?

- A. Enable Require value before publish
- B. Enable Required
- C. Configure a validity condition
- D. Configure a visibility condition

Answer: A

Explanation:

SAP Ariba provides a specific property in the Advanced tab called "Require value before publish", which ensures that a field must be populated prior to the contract workspace being published. Enabling this option on the Supplier field enforces this mandatory behavior during the publish action. The standard "Required" checkbox only enforces field completion in the UI during data entry but does not prevent publishing if the field is empty. Visibility conditions control whether the field is displayed, not whether it is required at publish. Validity conditions enforce value correctness but not presence at publish time. This feature enhances data completeness at critical lifecycle points.

NEW QUESTION # 49

While working on editing a field for a customer, you notice that "Editable in full Contract Amendment" is not an option available in the advanced tab of field configuration.

What is likely the cause for this behavior? Note: There are 2 correct answers to this question.

- A. The contract must be in an amendment state for this option to be visible in customizing
- B. A customization is in flight and needs to be cleared and reset prior to making this change.
- C. The field you are customizing is not in the contract workspace or request classes.
- D. The field you are customizing is standard and therefore cannot be changed.

Answer: A,C

NEW QUESTION # 50

Who leads Suite Integration activities?

- A. SAP Deployment Lead
- B. Customer Success Manager
- C. Partner/Customer Functional Lead
- D. SAP Support

Answer: A
