Free PDF SAP C-CPI-2506 SAP Certified Associate - Integration Developer First-grade Reliable Test Tutorial

We are dedicated to providing an updated C-CPI-2506 practice test material with these three formats: PDF, Web-Based practice exam, and Desktop practice test software. With our C-CPI-2506 practice exam (desktop and web-based), you can evaluate and enhance your knowledge essential to crack the test. This step is critical to the success of your SAP C-CPI-2506 Exam Preparation, as these practice tests help you identify your strengths and weaknesses.

SAP Certified Associate - Integration Developer Sample Questions (Q20-Q25):

NEW QUESTION # 20
You have set up a basic authentication policy, but the API proxy returns an HTTP status of 401. What could be a reason?

- A. In the AssignMessage policy, the Assign To tag has the type="response"
- B. In the AssignMessage policy, the Assign To tag has the type="request"
- C. In the AssignMessage policy, the Assign To tag has the type="preFlow"
- D. In the AssignMessage policy, the Assign To tag has the type="postFlow"

Answer: B

Explanation:
In API Management (SAP Integration Suite), when implementing Basic Authentication policies:
If the AssignMessage policy does not correctly assign credentials to the request message, authentication will fail.
This results in HTTP 401 Unauthorized.
Other tags like preFlow, postFlow, response are policy flow phases, but the credentials must be applied to the request for proper authentication.
Thus, the root cause is when the Assign To = request is missing/misconfigured.

NEW QUESTION # 21
You configured a content modifier as follows: Action: Create | Name: ProductID | Source Type: XPath Source Value: //ProductID | Data Type: java.lang.string. After testing the content modifier, you receive an error message that contains the following fragment: "Java.lang.ClassNotFoundException: java.lang.string..." What caused the error message?

- A. Incorrect source value
- B. Incorrect source type
- C. Incorrect name
- D. Incorrect data type

Answer: D

Explanation:
In SAP Cloud Integration, when defining Content Modifier properties, the Java data type names are case-sensitive.
Correct type # java.lang.String
In the configuration, java.lang.string was used (lowercase "s"), which causes a ClassNotFoundException, since Java cannot find the class.
Other options are correct in form:
Source Type = XPath # Valid.
Source Value = //ProductID # Valid XPath.
Name = ProductID # Valid.
Thus, the error occurred because of incorrect data type specification.

NEW QUESTION # 22
You want to set up Exchange Properties in an integration flow. Besides a Content Modifier, what can you use?

- A. Groovy SDK scripting
- B. XML scripting
- C. Batch scripting
- D. Python scripting

Answer: A

Explanation:
In SAP Cloud Integration, Exchange Properties can be created and set using:
Content Modifier # Standard way to configure properties.
Groovy Scripting # Via the SAP CPI Groovy SDK, you can dynamically add or update exchange properties at runtime.
Other options:

Batch scripting, XML scripting, Python scripting # Not supported in SAP CPI.
Thus, besides Content Modifier, you use Groovy SDK scripting.

NEW QUESTION # 23
Which SAP offering manages integrations across hybrid and multicloud environments?

- A. SAP Cloud Platform Integration manages integrations across hybrid and multicloud environments.
- B. SAP Business Technology Platform manages integrations across hybrid and multicloud environments.
- C. SAP process Orchestration manages integrations across hybrid and multicloud environments.
- D. SAP Integration Suite manages integrations across hybrid and multicloud environments.

Answer: D

Explanation:
SAP Integration Suite is the strategic integration platform-as-a-service (iPaaS) from SAP. It provides a comprehensive set of integration capabilities for hybrid and multicloud landscapes.
It connects on-premise SAP systems, cloud SAP solutions (e.g., S/4HANA Cloud, SuccessFactors, Ariba), and third-party applications.
It offers capabilities like Cloud Integration, API Management, Event Mesh, Open Connectors, and Integration Advisor to support various integration patterns.
SAP explicitly positions Integration Suite as the solution to manage end-to-end integrations across heterogeneous and distributed IT landscapes.
Other options:
SAP Cloud Platform Integration was the older name of Cloud Integration (now part of Integration Suite).
SAP Process Orchestration is the legacy on-premise middleware and not designed for multicloud/hybrid environments.
SAP BTP is the overall platform; integration is only one capability within it.

NEW QUESTION # 24
You use an APiKey for authentication in an HTTPS API call.In which part of the Content Modifier is the APIKey included?

- A. Message body
- B. Exchange property
- C. Message header
- D. Attachment

Answer: C

Explanation:
When using API Key authentication for HTTP(S) calls in SAP Integration Suite:
The API Key is typically included in the HTTP header (e.g., APIKey: <value> or x-api-key: <value>).
Message headers are configured in the Content Modifier for outbound requests.
Other options:
Attachment # Used for file handling, not authentication.
Message body # Contains payload, not credentials.
Exchange property # Used internally within the flow, not sent externally.
Thus, the API Key must be placed in the Message header.

NEW QUESTION # 25
......

break through the bottleneck in the work, Unfortunately, if you got failed in C-CPI-2506 exam claim your refund, SAP C-CPI-2506 Reliable Test Tutorial You can share free shopping, SAP C-CPI-2506 Reliable Test Tutorial In this case, suggest you to ask our on-line for the discount code to enjoy more benefit for you.

Dino Mandrioli is a professor of computer science at the C-CPI-2506 Reliable Test Tutorial Politecnico di Milano, where he holds the chair of theoretical computer science, The Volatility Index, Many candidates clear exams and get certification with our C-CPI-2506 Exam Cram, SAP C-CPI-2506 assist many workers to break through the bottleneck in the work.
