For we make endless efforts to assess and evaluate our C-CPI-2506 exam prep' reliability for a long time and put forward a guaranteed purchasing scheme, we have created an absolutely safe environment and our C-CPI-2506 Exam Question are free of virus attack. If there is any doubt about it, professional personnel will handle this at first time, and you can also have their remotely online guidance to install and use our C-CPI-2506 test torrent.

### SAP C-CPI-2506 Exam Syllabus Topics:

Topic	Details

Topic 1	<ul style="list-style-type: none"> <li>• <b>SAP Integration Suite Overview:</b> This section of the exam measures the skills of Integration Consultants and covers the foundational concepts of the SAP Integration Suite. It provides an understanding of the suite's capabilities, its role in connecting applications, and its relevance in modern cloud-based integration scenarios.</li> </ul>
Topic 2	<ul style="list-style-type: none"> <li>• <b>SAP Event Mesh:</b> This section of the exam measures the skills of Solution Architects and centers on using SAP Event Mesh to support event-driven integration. It highlights the importance of asynchronous communication, event publishing, and subscription models, allowing organizations to build scalable and decoupled systems.</li> </ul>
Topic 3	<ul style="list-style-type: none"> <li>• <b>Implementing Cloud Integration:</b> This section of the exam measures the skills of Integration Consultants and examines how cloud integration flows are designed and deployed. It emphasizes creating integration scenarios, handling connectivity, and applying best practices to build efficient, secure, and reliable integration processes in SAP's cloud environment.</li> </ul>
Topic 4	<ul style="list-style-type: none"> <li>• <b>Managing APIs:</b> This section of the exam measures the skills of Solution Architects and focuses on managing APIs within the SAP ecosystem. It covers topics such as API provisioning, lifecycle management, security policies, and monitoring, ensuring candidates can handle APIs effectively for enterprise integration needs.</li> </ul>

## SAP Certified Associate - Integration Developer Sample Questions (Q32-Q37):

### NEW QUESTION # 32

Which expression language can you use to access the content of a message in an integration flow?

- A. XML expression language
- B. JavaScript expression language
- C. Spring expression language
- **D. Simple expression language**

**Answer: D**

Explanation:

In SAP Cloud Integration, the runtime message content, headers, and properties can be accessed using the Camel Simple Expression Language.

Examples:

`${body}` # Accesses the message payload.

`${header.<headerName>}` # Accesses message headers.

`${property.<propertyName>}` # Accesses integration properties.

Other options:

XML expression language # Not supported directly.

Spring expression language # Used in Spring apps, not in SAP CPI.

JavaScript expression language # Not used; JavaScript/Groovy scripts exist, but not for message expressions.

Thus, the correct language is Simple expression language.

### NEW QUESTION # 33

You want to integrate a SOAP adapter into an integration process and enable the adapter to send messages to the integration flow. Which user role must you set up in the SOAP adapter?

- A. MessagingSend
- **B. ESBMessaging send**
- C. MessagingsendtoCI

**Answer: B**

Explanation:

To integrate a SOAP adapter into an integration process and enable the adapter to send messages to the integration flow, you must set up the ESBMessaging send user role in the SOAP adapter. The ESBMessaging send user role grants the permission to send messages to the Enterprise Service Bus (ESB) of the Cloud Integration capability. The ESB is responsible for routing and delivering messages between different integration flows and adapters. Reference: Modernize Integration with SAP Integration Suite | openSAP

#### NEW QUESTION # 34

You want to use an HTTPS endpoint from an integration flow. In which of the following must you use the HTTP client?

- A. API Management capability within SAP Integration Suite
- **B. Open Connectors capability within SAP Integration Suite**
- C. SAP Business Application Studio
- D. SAP Integration Suite, advanced event mesh

**Answer: B**

Explanation:

To use an HTTPS endpoint from an integration flow, you can use the Open Connectors capability within SAP Integration Suite. Open Connectors is a feature that allows you to connect to over 160 third-party applications using standardized and normalized APIs. You can use the HTTP client connector to make HTTP or HTTPS requests to any endpoint that supports these protocols. You can configure the HTTP client connector with various parameters, such as URL, method, headers, query parameters, body, and authentication. Reference: Open Connectors | SAP Help Portal, HTTP Client Connector | SAP Help Portal

#### NEW QUESTION # 35

What minimum user permission is required to create a queue within the emis-s4hana message client?

- **A. Role collections for Event Mesh**
- B. Administrator privileges on the Event Mesh
- C. Sufficient authorization within the emis-s4hana system
- D. Emis-s4hana message client administrators group membership

**Answer: A**

Explanation:

In SAP Integration Suite, Event Mesh (EMIS), queue creation and management requires specific role collections assigned to the user in SAP BTP:

EventMeshAdmin # Provides full administration rights (create, delete, configure queues, topics, subscriptions).

EventMeshDeveloper # Allows development tasks, including working with queues and topic subscriptions.

Other options are not correct:

Message client administrators group membership # Not a BTP role collection concept.

Administrator privileges on Event Mesh # Too generic; the system enforces access through role collections.

Sufficient authorization within emis-s4hana system # S/4HANA authorizations do not govern Event Mesh capabilities.

Thus, the minimum permission required is assignment of the Event Mesh role collections in BTP.

#### NEW QUESTION # 36

What is Representational State Transfer (REST)?

- A. A description language for APIs
- **B. An architectural style**
- C. An application protocol
- D. A message protocol

**Answer: B**

Explanation:

Representational State Transfer (REST) is an architectural style for designing web services that are based on the stateless exchange of resources. REST uses uniform and predefined methods, such as GET, POST, PUT, and DELETE, to manipulate resources identified by URIs. REST also supports different formats for data representation, such as XML, JSON, or plain text. Reference: Integration Software | SAP Integration Suite, Modernize Integration with SAP Integration Suite | openSAP

## NEW QUESTION # 37

.....

You can open the SAP PDF Questions file anywhere and memorize the actual SAP C-CPI-2506 test questions. You can install Customer Experience SAP C-CPI-2506 pdf dumps on your laptop, tablet, smartphone, or any other device.
