Reliable C-S4CPB-2508 Test Question & C-S4CPB-2508 Valid Test Objectives

As the famous saying goes, time is life. Time is so important to everyone because we have to use our limited time to do many things. Especially for candidates to take the C-S4CPB-2508 exam, time is very precious. They must grasp every minute and every second to prepare for it. From the point of view of all the candidates, our C-S4CPB-2508 training quiz gives full consideration to this problem. And we can claim that if you study our C-S4CPB-2508 study materials for 20 to 30 hours, you can pass the exam for sure.

SAP C-S4CPB-2508 Exam Syllabus Topics:

Topic	Details
Topic 1	• Extensibility and Integration: This section of the exam measures the skills of Business Process Experts and evaluates the ability to extend SAP S • 4HANA Cloud functionalities using in-app and side-by-side extensibility options. It also includes integrating SAP systems with external applications to support end-to-end business processes.

Topic 2	• Data Migration and Business Process Testing: This section of the exam measures skills of Business Process Experts and focuses on preparing, migrating, and validating business data within SAP S • 4HANA Cloud. It also includes setting up and executing business process testing to ensure smooth operations after go-live.
Topic 3	• This section of the exam measures skills of Business Process Experts and focuses on adopting a cloud-first approach during implementations. It also emphasizes the importance of building the right project team and using fit-to-standard workshops to align customer requirements with standard SAP processes.

SAP Certified Associate - Implementation Consultant - SAP S/4HANA Cloud Public Edition Sample Questions (Q20-Q25):

NEW QUESTION # 20

An SAP Fiori app isn't displaying on the SAP Fiori Launchpad even though the business role granting permission to the app is correctly assigned to the user.

How would you troubleshoot? Note: There are 3 correct answers to this question.

- A. Check the business role template.
- B. Check the Role Maintenance app.
- C. Check the business catalogues assigned to the role.
- D. Check the space and page(s) assigned to the role.
- E. Check the restrictions for the role.

Answer: A,B,C

NEW QUESTION # 21

Which of the following would prevent SAP from running a Post-Upgrade Test (PUT) on a customer's behalf?

Note: There are 2 correct answers to this question.

- A. The process steps have been reordered.
- B. The test process failed the execution pre-check.
- C. Data marked for deletion is picked for execution.
- D. An execution variant has not been maintained.

Answer: B,D

Explanation:

The following would prevent SAP from running a Post-Upgrade Test (PUT) on a customer's behalf:

* An execution variant has not been maintained: An execution variant is a set of test data that is used to execute a test process. It contains the input values and expected results for each test step. If an execution variant is not maintained for a test process, the system cannot run the test automatically and will skip it1.

* The test process failed the execution pre-check: The execution pre-check is a validation that is performed before the test execution to ensure that the test process and the execution variant are consistent and complete. If the execution pre-check fails, it means that there are some issues or gaps in the test process or the execution variant that need to be resolved before the test can be run2.

The following would not prevent SAP from running a Post-Upgrade Test (PUT) on a customer's behalf:

* Data marked for deletion is picked for execution: Data marked for deletion is data that is no longer relevant or valid for the test process. It can be marked for deletion by the customer or by SAP. However, this does not affect the test execution, as the system will ignore the data marked for deletion and use the available data for the test process3.

* The process steps have been reordered: The process steps are the individual actions that are performed as part of the test process. They can be reordered by the customer or by SAP to reflect the changes in the business process or the user interface. However, this does not affect the test execution, as the system will follow the order of the process steps as defined in the test process4.

NEW QUESTION # 22

You want to restrict end user activities for an application.

Where would you look up the business catalog(s) that grant access to the app?

- A. In the Configure Your Solution app
- B. In the Define Your Scope app
- C. In the App Finder app
- **D. In the SAP Fiori Apps Reference Library**

Answer: D

Explanation:

The SAP Fiori Apps Reference Library is a comprehensive online library of all available SAP Fiori apps. It provides information about the app features, technical data, configuration, and implementation. You can use the SAP Fiori Apps Reference Library to look up the business catalog(s) that grant access to an app by following these steps:

- * Go to the SAP Fiori Apps Reference Library website and log in with your SAP credentials.
- * In the search bar, enter the name or ID of the app you want to restrict access to, and click the search icon.
- * In the search results, click on the app tile to open the app details page.
- * On the app details page, scroll down to the Implementation Information section and expand the Configuration tab.
- * Under the Configuration tab, you will see the Business Catalog field, which lists the business catalog(s) that contain the app. You can click on the business catalog ID to view more details about it, such as the business roles, business groups, and other apps that are assigned to it.

NEW QUESTION # 23

What have SAP S/4HANA Cloud Business Workflows been designed for? Note: There are 3 correct answers to this question.

- A. To create standard procedures from SAP Signavio Process Navigator
- **B. To create business processes with a high number of people involved in a pre-defined sequence**
- **C. To create complex, repeated work processes with iterative cycles**
- D. To create very simple release or approval procedures
- **E. To create cross-product workflow procedures**

Answer: B,C,E

NEW QUESTION # 24

What defines the organizational entities that are required in SAP Central Business Configuration?

Note:

There are 2 correct answers to this question

- **A. The selected scope**
- **B. The selected deployment target**
- C. System consistency checks
- D. Added partner content

Answer: A,B

Explanation:

The organizational entities that are required in SAP Central Business Configuration are defined by the selected deployment target and the selected scope. The deployment target specifies which SAP cloud solutions are included in the project, such as SAP S/4HANA Cloud, public edition. The scope specifies which business processes and countries/regions are included in the project, such as sales or professional services.

These choices determine which organizational units are required to run the underlying processes, such as company, business residence, sales organization, or project unit. Added partner content and system consistency checks do not define the organizational entities, but rather enhance or validate the configuration. References = SAP Central Business Configuration - Overview, page 5; Introducing SAP Central Business Configuration In SAP Central Business Configuration, the organizational entities that need to be defined for an SAP S

/4HANA Cloud Public Edition implementation are influenced by two primary factors: the selected deployment target and the selected scope. The deployment target refers to the specific environment or system where SAP S/4HANA Cloud will be
