- A. Defines which process models are connected to the data
- B. Defines where to load the data
- C. Defines how ETL extracts and transforms data
- D. Defines which process KPIs are related to which data table

Answer: B,C

Explanation:

The data model in the ETL Data Pipeline configuration of SAP Signavio Process Intelligence defines the structure and processing rules for data used in process mining. The SAP Signavio ETL Guide clarifies:

* Option C (Defines how ETL extracts and transforms data):The data model specifies the schema for the event log and case attributes, guiding the extraction and transformation processes to ensure data is formatted correctly for analysis.

* Option D (Defines where to load the data):The data model determines the target tables or structures in Process Intelligence where transformed data is loaded, ensuring it is accessible for analysis.

* Option A (Defines which process KPIs are related to which data table)is incorrect because KPIs are defined in metrics or widgets, not directly in the data model, though the model supports the data used for KPIs.
